PREFACE

(U) This volume is one of a series being prepared under a research project carried out by the Research Analysis Corporation Field Office-Thailand for the Advanced Research Projects Agency, Office of the Secretary of Defense (OSD/ARPA) and the Joint Thai-US Military Research and Development Center. The basic objective of this project is to compile a systematic and comprehensive description and documentation of counterinsurgency programs, organizations, and activities in Northeast Thailand. A secondary objective, to be undertaken in a separate research report, is to determine and define the systems relationships that exist among CI programs and activities underway in the Northeast and to describe how these individual programs interrelate within and across functional mission lines.

(U) This project is a support task of ARPA's Rural Security Systems Program (RSSP), a comprehensive research effort initiated in late 1966 to design an efficient and integrated system for improved rural security in Northeast Thailand. It became clear early in the RSSP effort that, because of the extreme proliferation of programs and even organizations engaged in countering insurgency in the Northeast, a comprehensive documentation of all counterinsurgency programs was required before any research on means of improving the security environment could be meaningfully undertaken. Many organizations exist to perform similar or closely related counterinsurgency functions; several programs have essentially the same objectives; many programs overlap; and all are highly interrelated. Because of this proliferation and attendant duplication of function, there is a requirement to examine each of the programs in some detail to discern exactly what each is doing and how they relate to one another, both as independent organizations and as elements of larger functional systems.

(U) The information in this and the other volumes of this series is expected to be of value to those currently involved in managing and advising on CI programs on a day-to-day basis, those concerned with the development of improved CI management structures, US Mission personnel newly arrived in Thailand who require an orientation to ongoing CI programs, decision makers involved in determining the future direction of the CI effort, and research personnel engaged in follow-on studies. While the present volume is designed for use primarily by those concerned with the village security environment in the Northeast and with the capabilities and activities of the various RTC paramilitary elements, it should also be of value to those whose activities are not directly concerned with security but who often must relate their efforts to those of such paramilitary elements.

(U) Each program or organization is described separately in this volume while an introductory Overview section compares the similar facets of each. The program descriptions follow a three-part format, with the details varying depending on the particular program. The first major category of these descriptions is organizational and may include some or all of the following; command and control structure, locations, mission and functions, strength, equipment, logistic systems, mobility, and training. The second major category involves the examination of the activities of the particular organization as they relate to counterinsurgency. This may include the entire spectrum of such activities from armed patrols to civic action projects. The third section of these descriptions deals with interrelationships. The interface between the various programs is examined as well as the relations with local governmental authorities (from phuyaiaban to governor) and with special command and control bodies. The intent is to document and describe who works with whom in the day-to-day conduct of counterinsurgency in the Northeast.

UNCLASSIFIED

UNCLASSIFIED

(U) Data collection for this project has covered the entire spectrum of sources. All available reports and other secondary sources describing RTC paramilitary programs in force in Northeast Thailand were examined. Emphasis throughout, however, has been placed on documentation of organizations and programs as they actually exist. Interviews were conducted with the many officials concerned with these programs, both in Bangkok and in nearly all of the changwats of the Northeast. In addition to interviews and document search, extensive data collection in the field was also undertaken. Much of the information contained in this volume was acquired through field trips taken to the Northeast by the researchers concerned, and all of the organizations described in this report (with the exception of the VEV, which does not yet have operational teams) have been observed in operation on the ground.

(U) Although organizations may be briefly examined in their national context and mention may be made of strengths, locations and activities elsewhere in the country where applicable, emphasis is placed on the role of these programs in the Northeast. During the data collection period of this project the insurgency problem was by far the greatest in that part of Thailand and the overwhelming portion of the RTC CI effort was commensurately so located. For purposes of this project, the Royal Thai Survey Department definition of the boundaries of the Northeast has been accepted. This area includes 15 of the 71 administrative divisions of the Kingdom of Thailand known as changwats. These same 15 changwats comprise Police Regions III and IV and the area of responsibility of the RIA Second Army. They are:

Buri Ram	Nakhon Phanom
Chaiyaphum	Nong Khai
Kalasin	Roi Et
Rhon Kham	Sakon Nakhon
Korat (Nakhon Ratchasima)	Si Sa Ket
Loei	Surin
Maha Sarakham	Udon

Udon

(U) In the text, transliterations of Thai words have been used (e.g. changwat, nai amphoe, tambon, phuyaiiban, etc.) where no exact equivalent in English exists. Most of these words are in common usage and have been anglicized in practice. A glossary has been provided to assist those readers not familiar with these words. Transliteration of place names has generally followed the system recommended by the Royal Institute of Thailand which has also been used by the Army Map Service in the preparation of their maps and by the National Statistical Office, the Department of Local Administration, and the US Operations Mission-Thailand in the joint preparation of their two useful publications, Changwat-Amphoe Statistical Directory and Amphoe-Tambon Statistical Directory of 14 ARD Changwats. Transliteration of officials' names, however, has followed individual preference.

(U) The detailed exposition of these organizations and programs has suggested areas in which improvements could be made. It is planned to make some preliminary, practical recommendations based on the information contained in this volume and to forward them to pertinent agencies through appropriate channels. The necessity of updating the information contained in this and other volumes is recognized, and an effort is being made to establish a mechanism to effect it in a methodical manner.

UNCLASSIFIED

ACKNOWLEDGMENTS

Special thanks are extended to the many RTC and US officials who contributed their time and guidance to this project; and who made available the information necessary to undertake this research. Of special importance for the preparation of this volume were the officials concerned with these paramilitary programs in the Department of Local Administration of the Ministry of Interior and in the Communist Suppression Operations Command. Also important to the success of this effort were the governors of Buri Ram, Kalasin, Nakhon Phanom, Sakon Nakhon, Udon, and Udon, where many of these programs are operating. They permitted RAC researchers to visit operational teams and discuss the programs with changwat and CPM staff officers, and local administrative officials.

Responsibility for the contents of this volume, however, rests with the authors. Although all the RACFO-I staff members assigned to this project contributed to this volume, the principal researcher and author of the VDC, VSO, VRS, and VPT sections was David C. Bowie, while David L. Morell prepared the PAT, CA, VSE, and Overview sections. Mr. Morell was also the chairman for this volume.

GLOSSARY

Amphoe	Administrative division of a changwat; comparable to a county.
Baht	Thai unit of currency; one baht is approximately equivalent to \$.05.
Changwat	The principal administrative division of the Kingdom of Thailand; comparable to a province or state.
Kamnan	Appointed (or, in some cases, elected) head of a tambon.
King Amphoe	A sub-amphoe established when the increasing population of an amphoe or the security situation warrants more decentralized control. (Throughout this volume, a base map of the Northeast has been used which delineates amphoe and king amphoe boundaries as of March 1968.)
Kathayom	Thai secondary school formerly consisting of eight grades following four years of primary school. Currently consists of five grades following seven years of primary school. (In this text the old designations are used.)
Nai Amphoe	Appointed head of an amphoe.
Palad Amphoe	Deputy to a nai amphoe.
Palad Changwat	Deputy to a changwat governor; usually more than one, each with a separate function.
Phuayaban	Elected chief of a village.
Prathom	Thai elementary school formerly consisting of four grades; currently consists of seven grades. (In this text the old designations are used.)
Wat	An enclosed area containing the buildings associated with Buddhist worship; the temple compound (usually one in every village).

UNCLASSIFIED

OVERVIEW

Paramilitary Organizations and Programs

(U) This volume provides detailed descriptions of five Thai paramilitary programs, the Village Radio System (VRS) and the Census Aspiration program.* The primary function of all these programs is to provide security for remote villages. This activity fits into the overall RTC counterinsurgency effort by separating the insurgents from their base of support for manpower, food, and intelligence. A secondary responsibility in the case of most of these programs is to induce villager respect for and cooperation with the RTC by the conduct of civic-action projects. Together, the five presently active programs field some 5,450 locally recruited volunteers who operate in teams of 10 to 12 members deployed in approximately 750 of the 15,000 villages in the Northeast.

STRUCTURE AND COORDINATION

(U) Except for the Village Protection Teams (a special program initiated by the Governor of Changwat Ubon) all these programs are operated by several divisions of the Department of Local Administration (DOLA) of the RTC Ministry of Interior. Coordination is effected through various committees and through the auspices of the Department's Director-General and Deputy Director-General. Since all these efforts involve village security, they are of direct relevance and importance to the overall suppression coordination and execution functions of the Communist Suppression Operations Command (CSOC) and the RTA Second Army Forward Headquarters.

(U) At Changwat level these paramilitary efforts fall under the cognizance of the governor and his deputy, the palad changwat for security. Seven of the Northeast changwats have centers of coordination of counterinsurgency activities by civil, police, and military elements known as CPMs. These centers are headed by the governor and have a permanent operations staff. Counterinsurgency efforts in the other eight Northeast changwats are coordinated through Communist Suppression Committees (CSC) chaired by the governor.

(U) Amphoe-level coordination of paramilitary efforts is particularly important to the success of the programs in providing security to the local villages. This is the lowest administrative level at which there are full-time officials concerned with implementation and support of the several DOLA programs, and coordination with other related RTC elements (police, military, and development agencies). The functions of the palad amphoe for security are critical to this effort. This official, usually an army officer transferred to DOLA, is responsible for providing full-time assistance to the nai amphoes in implementing these DOLA programs. Coordination with the amphoe police and any assigned military units is affected by the palad security or nai amphoe.

*Although neither the VRS nor the CA program fields armed forces, they are included in this volume because they serve to expand the capabilities of the five paramilitary programs and are essential to a discussion of the village security environment in Northeast Thailand. The VRS provides a communications link for paramilitary units and local government officials; the CA program, through the information collection activities of its village cadres, contributes to the effectiveness of paramilitary units operating in the same area.

CONFIDENTIAL

UNCLASSIFIED

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(U) Below amphoe level, in the tambons and villages where these paramilitary units actually operate, there is little coordination among them, or between them and supporting elements (police, military, or development). The khamnan has no staff to effect such coordination--nor is he usually personally trained or inclined to do so himself. He seldom has any radio communication with elements located in his area of responsibility.

COMPARATIVE ANALYSIS OF VILLAGE PARAMILITARY ORGANIZATIONS

(U) The principal characteristics of the village paramilitary organizations are shown in Table 1; Figures 1, 2, 3, and 4 show the geographical coverage by amphoe of all seven programs discussed in this volume; and Appendix A indicates deployment in the Northeast by tambon.

Strengths and Coverage

- (U) (C) Volunteer Defense Corps (VDC). The VDC has approximately 3,720 armed men stationed in 372 villages in the Northeast providing local protection and is by far the largest program. It has expanded greatly since 1966 when the first VDC were called to active duty in Changwat Sakon Nakhon and assigned to a village to provide armed security. Most activated VDC have been provided with cadre leaders from the Provincial Police. The number of VDC serving on active duty in Northeast villages jumped significantly in early 1967 with the advent of CSOC's "0910 Plan," an operation designed to provide protection to villages and suppress insurgents in 11 designated areas. These VDC serve in Joint Security Teams with police as cadre. In mid-1967, the number of VDC providing village-level security again increased by approximately 1,000 men who were trained and deployed (often in full tambon VDC squad elements) in security-sensitive areas. These men received longer training and more modern weapons and equipment than did the earlier active VDC; they are often led by the khamnan serving on active duty with the unit.
- (U) (C) Village Security Officers (VSO) and People's Assistance Teams (PAT). These village security "pilot" programs, initiated in late 1966 and implemented in selected areas of the Northeast in 1967, produced valuable experience and lessons for later village security efforts. The VSO has approximately 800 men serving on active duty in 50 villages of nine amphoes, primarily in Nakhon Phanom. (This is about 60 percent of the VSO members trained; the rest remain at home in their villages, not serving on active duty except when so ordered). The PAT program has about 400 men in 34 teams throughout 7 Northeast amphoes, primarily in Sakon Nakhon.
- (U) (C) Village Protection Teams (VPT). A similar effort to provide armed protection to exposed villages--the VPT program--covers four amphoes of northern Ubon with teams in 26 villages and a total of 360 men. This is a "local VDC" similar to the nation-wide organization and receives much of its funds from the VDC budget. Its members, however, are residents of the village which they protect, and the program was initiated by the local governor and nai amphoes as a separate entity.
- (U) (C) Census Aspiration (CA). This program differs from all the others described here in that the man in the village (only one man and, therefore, called a CA cadre and not a CA team) is unarmed. He enhances the security of the village by producing information and intelligence on the subversives in the vicinity. There are approximately 170 people engaged in the CA program in two Northeast changwats, Sakon Nakhon and Nakhon Phanom. This includes 138 village cadres and 32 support staff members.
- (U) (C) Village Security Force (VSF). The VSF is a new paramilitary program currently being formulated. Available information is, of course, tentative, but indications are that initially the program will operate in 10 Northeast amphoes with about 2,200 men.

Team Size

- (U) (C) The armed village paramilitary elements all operate in teams of similar size. Depending on local conditions, they range from a six-man VPT in Ubon to a 25-man VSO element in Nakhon Phanom; most teams have 10-12 members. Each of these elements operates in a semi-autonomous fashion in its assigned village, coordinating with nearby police (tambon or amphoe) or military units, but functioning alone and reporting directly to the nai amphoe or his deputy. At times the units may work in the same village and cooperate to protect its residents; they may be combined with local defense volunteers organized in a variety of forms. The CA man operates alone; in some cases he is located in a village with a VDC, PAT, or VSO unit.

Recruitment Base

- (U) (C) The VPT, VSF, CA, and (to a certain extent) the VSO recruit, train, and assign men to

PARAMILITARY ORGANIZATIONS AND PROGRAMS

defend their own village of residence. However, many of the VSO members serve in approximates or "sector forces" composed of members from several villages providing protection and support for a larger area.

(U) (C) The VDC and PAT programs operate differently in this regard. A VDC member may be called to active duty to serve wherever ordered, but, in practice, those assigned to Joint Security Teams or CPM Village Protection Units have served in their amphoe of residence. The tambon squads called to active duty as units in 1967 and 1968 are composed of residents of the tambon; the squad, often headed by the local kamnan, is assigned to protection duties in a designated village in the tambon. The PAT program recruited on an amphoe-wide basis; the amphoe teams can be assigned by the nai amphoe to any village in the amphoe. In practice, nearly all PAT teams have moved from one village to another within the amphoe at least once.

Major Activities

(U) (C) All the four organizations which presently field armed village teams (VDC, VSO, PAT and VPT), provide armed protection to the villages in which the teams are assigned. Basically, the VDC, VSO, and VPT provide only protection, with limited contributions to intelligence collection and village improvement. The PAT units, on the other hand, are specifically trained and equipped to carry out the broad missions of providing protection to their village through armed presence and patrols, collecting intelligence, and assisting in and stimulating small villager self-help projects. These may include repair of buildings; working on village roads, bridges, and culverts; construction of small dams and shallow wells; and participation in agricultural improvement efforts. In addition, each PAT has one or two members (often women) who are trained as paramedics and who dispense medicines and provide elementary medical assistance for local villagers. Present planning is for VSFs to operate in a manner similar to the PATs.

Weapons and Communications Equipment

(U) (C) There is no standardization of paramilitary weapons or radios. The most prevalent weapon in use is the Springfield rifle M1903. Many VDC trained and activated in 1967, however, received the more modern M1 rifle which is also provided to members of the PATs. Some PAT members also carry M1 carbines and M3 submachine guns, as will the VSF members. Shotguns (12-gauge) are the standard weapon for the VSO; some VPT members have similar shotguns. No paramilitary elements in the Northeast are assigned machine guns, and there are no M16 (AR15) rifles or M79 grenade launchers such as possessed by some units of the BPP and RTA.

(U) (C) There are several kinds of radios being used by the village teams. Many have access to the FM-1 and FM-5 radios distributed by the VRS to amphoes and tambons; some, in fact, take the radio assigned to the kamnan and move it to the team's defensive position in a village within the tambon. Other teams have FM-1/5 or TR-20 radios provided to CSOC to assist the overall suppression operation. The PATs have HT-1 radios which link the teams with a similar set at the nai amphoe's office. The VSF teams are scheduled to have FM-5 radios especially provided by VRS which will link the team on the VRS frequency with the kamnan and tambon police station (the latter will be provided a VRS radio to supplement its police radio, permitting contact with the VSF).

Uniforms

(U) Some of the village paramilitary defense forces (especially the VDC) are issued fatigue uniforms and boots which resemble those of a regular military force. The PAT members wear blue denim pants and shirts, similar to villager dress, but standard for the whole team. The VSO wear the regular RTC administrative uniform of khaki shirts and trousers. Many VSO members serving on active duty, however, wear fatigues and boots, as do VPT members, who were issued no uniform at all. CA members wear their normal civilian clothing. It is not planned to issue uniforms to the VSF.

Pay

(U) Although these are all DOLA-operated programs, there is no standardization of pay for team members which has led to some morale problems. With the possible exception of the VPT, the men serving in these paramilitary units receive pay generally sufficient to meet the costs of living in rural Northeast villages and commensurate with their full-time services. Those residing in their own village (VPT, VSO, VSF, and CA) generally receive a somewhat lower monthly salary than those who are assigned away from their home village (VDC, VSO, and PAT) as their living costs are considered to be less. The figures in Table 1 include both monthly salaries and any per diem or other allowances authorized when serving on active duty.

(U) (C) For most of these paramilitary teams the funds for salaries and per diem allowances come

CONFIDENTIAL

OVERVIEW

from the overall CSOC budget. The money is allocated to the responsible changwat CPM for payment of team members. Actual payment is usually made by the palad amphoe for security, who pays those teams in his area. Funds to pay the CA salaries (and for PAT prior to March 1968) came from US assistance; payments were made by the palad for security.

- (U) (C) A joint Thai/US Evaluation of the VSO conducted in 1967 found that a large percentage of VSO members complained about the low level of pay and the irregularity with which it was received, with a consequent lowering of morale. An evaluation of the PAT program in late 1967 indicated that PAT salary levels tended to be resented by VDC members in nearby (or occasionally the same) villages, who felt that they were performing the same functions for 30 percent less pay. When PAT salaries shifted from US to RTC sources in early 1968, there was some fear of lower PAT morale due to lower pay (equal to the VDC). This problem was solved temporarily by extra allowances to keep the PAT salary at \$680 per month until June 1968.

Training

- (U) (C) As shown in Table 1, no two of the paramilitary units discussed here receive the same training. In fact, even within one organization (such as the VDC) units in different areas or at different times receive quite different training curricula of varying length from different instructors. Training for the VDC is conducted by elements of the RIA at the changwat or amphoe seats from which the members are recruited. The changwat companies receive 15 days of basic training; the amphoe platoons and tambon squads receive 35 days' training. VDC members also receive refresher training at sporadic intervals, and leadership training for selected individuals.
- (U) (C) The VSO training was given by instructors from DOLA and the police (PP). The team leaders (phuyalibans) receive 4 weeks of instruction; all others receive 3 weeks. The training is split between a training center at Udon and the home amphoe of the members.
- (U) (C) PAT and CA members received their training at Camp Suan Son, located near Hua Hin. The instructors came from CSOC and DOLA, and the basic training lasted for 8 weeks for PAT and 4 weeks for CA. PAT leaders received an additional week of instruction, and PAT members selected to fulfill an additional CA reporting function underwent a special 2-week course. The PAT medics were trained in a 6-week course at the Public Health Hospital at Khon Kaen. One of the special features of the PAT and CA training was the political and motivational instruction designed to produce an enhanced sense of nationalism, commitment, and motivation on the part of team members. The PAT training also included instruction in village improvement skills (carpentry, masonry, barbering, agriculture, and animal husbandry).
- (U) (C) The VFT training lasted 15 days and consisted almost entirely of techniques of armed protection. The training was given by elements of the RIA Special Forces at the four amphoe seats concerned with the program.
- (U) (C) The training projected for VSF members will, in many ways, be similar to that provided PAT members. It will be given at a VSF training site at Prachuap Khiri Khan and last 8 weeks. Leaders will receive an extra week's instruction, and CA/VSF reporters will take a special 2-week course. The VSF training will contain political and motivational instruction similar to that given during the PAT course. VSF members will be trained in development skills, but to a somewhat lesser extent than were the PAT members; the VSF team does not have a medic.

VOLUNTEERS DEFENSE CORPS

SUMMARY

- (U) (C) The Volunteer Defense Corps (VDC) was established by Royal Decree in 1954 as an element within the Ministry of Interior (MOI). The VDC was deactivated following the assumption of power by Field Marshal Sarit in 1958. In 1962, the VDC was reorganized and revived by General Praphas, the Minister of Interior. A further reorganization occurred in 1966 as a result of the efforts of General Surakij (Chief of Staff of both CSOC and the RIA) and Lt General Saliyud (Director of the Operations and Coordination Center, CSOC). Their aim was to develop a rural security force responsive to CSOC requirements and capable of handling the village security problem in the Northeast in conjunction with CSOC's 0910 Plan and related CPM local security efforts.
- (U) (C) There are two basic roles for the VDC. This organization is the major armed reserve force (national guard) of Thailand. In the event of a national emergency or natural disaster, the VDC can be called to active duty in support of the civil government police, or military. The other basic role of the VDC--and its most important in terms of the current counterinsurgency effort in Northeast Thailand--is to provide the major manpower base (active-duty) for village-level and tambon-level armed security and protection elements which are critical to current suppression operations.
- (U) (C) There are several different types of VDC organizational units: Changvat Companies, Border Amphoe Platoons, Special Amphoe Companies, Tambon Squads, Village Protection Units, and Joint Security Teams. The first three of these six have never been called to active duty as units; however, they form the primary national reserve capability of the VDC and provide individuals for assignment to CSOC's 0910 Plan Joint Security Teams and the CPM Village Protection Units. These two elements are the major users of the VDC active-duty manpower, and both are very important to RTC provision of armed security to exposed and threatened Northeast villages. The Joint Security Teams, composed of VDC with police or RIA cadres, function in CSOC 0910 Plan areas; the VDC Village Protection Units provide security to villages located elsewhere in the seven CPM changvats (they may, in fact, often be "joint," with police or military leaders). The Tambon Squads, an integral element of the Special Amphoe Companies, began to be trained and deployed as complete village security units in the last half of 1967; the company and platoon headquarters have not been activated.
- (U) (C) Available figures indicate that as of early 1968, over 1,300 VDC were deployed in 151 villages in the 0910 areas, and another 2,300 VDC were providing security in an additional 230 villages located elsewhere in the CPM changvats. Thus, as of early 1968, the VDC was by far the major element in the village-level counterinsurgency force structure in Northeast Thailand. Another 830 VDC were serving on active duty as protection and security elements for fixed installations, VDU field and headquarters sites, and as amphoe-level reserve and patrol forces.
- (U) (C) The VDC receive training from various elements of the RIA, including the Special Forces. They are paid about \$480 per month, and most are armed with Springfield M1903 rifles. Many of the Tambon Squads deployed in 1967, however, are armed with newer and more effective M1 rifles. The primary VDC mission is to provide armed security and protection to the 382 villages in which they are assigned. The organizational structure goes no lower than the tambon, but employment of these forces is primarily at the village level.

UNCLASSIFIED

PARAMILITARY ORGANIZATIONS AND PROGRAMS

MISSIONS

General Responsibilities

- (U) (c) The overall missions of the VDC as reported in a 1965 Joint USOM/MACTHAI evaluation² of the VDC are:
- (1) to eliminate dangers created by natural hazards or enemy forces;
 - (2) to cooperate with police in maintaining local security;
 - (3) to safeguard important buildings and lines of communication;
 - (4) to be responsible for intelligence and counterintelligence in their local areas;
 - (5) to support the armed forces in their counteraction against enemy elements; and
 - (6) to serve during martial law under the command of local military units as ordered.

- (U) (c) These rather broad missions are further delineated in VDC Act, Issue No. 2, of 1966 which divides VDC missions into two categories: those during time of peace and those during time of war. There are six VDC missions in time of peace as follows:

- (1) to assist local authorities and police in the maintenance of local law and order, with emphasis placed on investigating and reporting;
- (2) to assist local authorities in controlling and extinguishing fires;
- (3) to assist local development personnel in their activities;
- (4) to assist in the repair of government offices and other public buildings, as well as to provide transportation and evacuation of the local populace in time of emergency;
- (5) to assist in relief during natural disaster; and
- (6) to assist medical and health authorities in giving treatment and hospitalization, and to aid in the prevention of epidemics.

Six additional missions are assigned to the VDC in time of war, as follows:

- (1) to assist in relief to problems caused by enemy action;
- (2) to cooperate with local authorities and police in maintaining security;
- (3) to guard important installations and lines of communication;
- (4) to prevent espionage;
- (5) to render assistance to military personnel as requested; and
- (6) to act as a national reserve force to support and reinforce regular military units.

Counterinsurgency Responsibilities

- (U) (c) CSOC has assigned the following additional missions to those VDC called to active duty in CPN areas:

- (1) to provide the villages in which they are assigned with security against insurgent action;
- (2) to provide tambon-level security against the insurgents;
- (3) to arrest insurgents whenever possible;
- (4) to destroy insurgent meeting places, weapons, supplies, and logistical facilities; and
- (5) to conduct psychological operations and civic action projects.³

ORGANIZATION

(U) The overall responsibility for VDC policy, organization, and budgeting rests with the 21-man VDC Committee composed of high-ranking officers from the Ministry of Interior (MOI), Ministry of Defense (MOD), Ministry of Finance (MOF), and Ministry of Justice (MOJ). The Chairman of the VDC Committee and Commander-in-Chief of the VDC is the Minister of Interior.⁴ The Deputy Chairman of the VDC Committee is the Minister of Defense. The other members of the Committee are the following:

- Under-Secretary of State, MOI
- Under-Secretary of State, MOF
- Deputy Under-Secretary-Executive, MOI
- Deputy Under-Secretary-Development, MOI
- Deputy Under-Secretary-Technical, MOI

 Chief of Staff, RTA
 Director of Joint Operations, Supreme Command Headquarters, MOD
 Director of Operations, RTA
 Chief, Territorial Defense Department, RTA
 Director, Budget Bureau, OPM
 Chief, General Accounts Division, MDF

The Committee Secretary is the Director-General of the Department of Local Administration, MOI. He is assisted in this duty by two officials, the Deputy Director-General of DOLA and the Chief of the Volunteer Defense Division, DOLA.

(U) Administrative control of the VDC is exercised by DOLA through its Volunteer Defense Division (VDD). This division is responsible for maintaining personnel rosters and reports, publishing a VDC magazine, and supporting meetings of the VDC Committee. The VDD is represented in each changwat by a small staff which performs primarily a record-keeping function.

(U) In February 1966 the Minister of Interior issued an order establishing a VDC Central Headquarters.⁴ Figure 5 illustrates the organization of this element. The Operations Branch of the VDC Central Headquarters is, for all practical purposes, the same as the VDD (the Chief of the VDD is the Chief of Operations, VDC Central Headquarters).⁴

(U) VDC logistics are the responsibility of the Police Quartermaster, TNPD, MOI. VDC weapons for those elements not serving on active duty are kept in Police Quartermaster armories.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

security-sensitive areas. All Border Amphoe Platoons are to be eventually converted into Special Amphoe Companies by the addition of Tambon Squads and a company headquarters.¹ This conversion began in mid-1967. The nai amphoe is commander of the VDC in his area; he reports directly to the governor. These VDC units may be attached to the police or to the RTA for specific operations.

(U) The Special Amphoe Company is composed of a company headquarters (17 men), an amphoe platoon (40 men) available at amphoe level as a reinforcement element, and a varying number of Tambon Squads (12 men per squad--one squad for each tambon in the amphoe). The nai amphoe has a special deputy for security (the palad amphoe--security) to supervise VDC affairs and related security matters. A proposal to have the amphoe platoon commanded by an RTA NCO, directly responsible to the nai amphoe, is under consideration but has not yet been implemented.

(U) Tambon VDC. VDC squads of 12 men each have been formed in each tambon of those amphoes authorized a Special Amphoe Company. The commander of the Tambon Squad may be the local education officer or the kamnan. He reports to the nai amphoe through the palad amphoe--security. The Tambon Squads may be attached to or combined with police or RTA elements as required, with these elements providing leadership cadre for the VDC. These squads are the only VDC elements actively engaged in counterinsurgency activity as units in a village security role.

Future Plans

(U) (C) Changes in VDC organization and role may result from a decision of the RTC Council of Ministers to create a new, village based, security organization, termed the "Village Security Force (VSF)."² This organization will be village oriented, as opposed to the VDC's lowest organizational echelon--the Tambon Squads. VSF members will be natives of the villages they are assigned to protect. VSF training will be similar to that given the PATs and its legal structure will build on that of the VSO.

(U) (C) In August 1967 the US Mission approved a 5-year plan for VDC improvement which was submitted by MACV/JUSMAG under its Military Assistance Program. This plan calls for the expenditure of \$2,715,000 for 5 fiscal years (FY68-72), providing improved training and weapons for additional VDC members. All FY68 program funding approvals have been received, while the FY69 has been approved at the OSD level as of March 1968.³

FUNDING

(U) (C) The VDC budget for 1968 is \$21,385,300.⁴ The figure for 1967 was \$14,080,300. These figures do not include payments to VDC members assigned to CSOC, MDU, or other units. The parent organization requesting the assignment of VDC members pays their per diem (see the section on "Locations and Strengths" for a description of these assignments).

(U) (C) Approximately \$20,000,000 has been budgeted annually by the RTC in FY66, FY67, and FY68 to finance the VDC elements (JSTs) assigned to CSOC 0910 Plan Areas and the VPUs located elsewhere in the CPM changvats.

LOCATIONS AND STRENGTHS

(U) Accurate and complete information on the exact locations and strengths of VDC elements (both authorized and active duty) is not available. In certain instances, there are conflicting sets of data. VDC members are called to active duty as individuals; once on active duty they may be transferred from one amphoe to another, or they may even be assigned to a different organization than the one for which they were originally activated. Thus, the data in this section are admittedly incomplete, especially regarding active-duty VDC strength; however, they are believed to be more accurate than any other available data in Bangkok. The information has come from MOI, CSOC, other RTG, and US agencies; field checks of the information on active-duty VDC strengths and locations have been performed in Buri Ram, Kalasin, Nakhon Phanom, Sakon Nakhon, Udon, and Udon.

Authorized Strength

(U) (C) In the various categories as of early 1968 there were approximately 17,000 VDC authorized in Northeast Thailand. These authorizations are summarized in Table 2 and described in detail in App B.

(U) (C) Changvat Companies. There are a total of 32 VDC companies authorized in the Northeast. Each changvat is authorized two units, except for Nakhon Phanom and Nong Khai which are each

¹For example, the only VDC operating in King Amphoe Rat Bhi in July 1967 were on loan from Amphoe Phang, Sakon Nakhon, and a VDC element activated from Amphoe Warichaphum was discovered in October 1967 to be assigned to Amphoe Saeng Phan Din.

Table 2

SUMMARY OF VDC AUTHORIZATIONS IN NORTHEAST THAILAND

TYPE OF UNIT	NUMBER OF MEN AUTHORIZED
VDC Changwat Companies	5,120
Border Amphoe Platoons	1,876
Special Amphoe Companies:	
1966 structure	2,144
1967-68 structure	7,142
Security Guard Duty	775
Total	17,057

authorized three. Each VDC Changwat Company is authorized 160 men, for a total authorization of 5,120 men.^{4,5} None of these units is on active-duty status, although many have provided individuals for activation.

(U) (C) Border Amphoe Platoons. A total of 27 amphoes in nine Northeast changwats are authorized VDC Border Amphoe Platoons, with a combined total of 1,876 men.⁵ None of these platoons has been called to active duty.⁶ Details on the locations of these authorized platoons are presented in App B.

(U) (C) Special Amphoe Companies. There are 14 VDC Special Amphoe Companies in the seven Northeast CPM changwats, based on the 1967 CSOC request.⁵ None is on active duty as a unit, although individuals have been called. A total of 2,144 men are authorized in these units. An additional 52 companies (or at least the Tambon Squad components) were authorized following CSOC requests in 1967-68.^{4,5} The total number of men involved is 7,142. Details are presented in App B. These authorizations provided the Tambon Squads which were the first VDC elements to be activated as units.

(U) Allocation for Security Guard Duty and Intelligence Collection. Allocations for security and intelligence duty assignments of VDC members are published annually by the VDC Committee. These allocations authorized designated agencies to call to active duty specified numbers of VDC (although funding must be separately obtained). Units are not designated and the number authorized can be drawn from a single VDC unit or from several units. The NSCC regularly uses this system, requesting VDC for security duty with the MEUs or for various separate security and intelligence roles (working with the police, guarding buildings and fixed installations, being bodyguards, or providing assistance in case of disaster). Pay for these VDC comes from the NSCC budget. There were 775 VDC authorized for this role in nine Northeast changwats in 1966 (believed to be a similar number in 1967 and 1968). Details are presented in App B.

Active Duty Strength

(U) (C) Available information, supplemented by field checks, indicates that as of early 1968 there were approximately 4,600 VDC serving on active duty in the Northeast, with nearly 90 percent of them engaged in activities in support of CSOC's overall communist suppression program. These men were assigned primarily to 150 Joint Security Teams (JSTs) in the CSOC 0910 Plan Target Areas, or to CPM Village Protection Units (VPUs) in another 230 villages in designated security-sensitive areas outside the 0910 Areas.

(U) There are no VDC Changwat Companies, Border Amphoe Platoons, or Special Amphoe Companies on active duty as integral units.⁶ Individuals from these units are serving on active duty, assigned to JSTs, VPUs, CPM reinforcement elements, MEUs, or in various other roles. Some Tambon Squads are serving as complete 12-man units in a village protection role. All JSTs have police cadres serving as unit leaders; most of the VPUs also have such cadres, although the Tambon Squads are fully composed of VDC personnel, usually led by the local khaman.

(U) (C) VDC in Joint Security Teams. There are 1,529 VDC members serving on active duty in the CSOC 0910 Plan JSTs.^{4,5} These VDC are deployed in 151 villages surrounding the 13 defined target areas in Changwats Buri Ram, Kalasin, Korat, Nakhon Phanom, Nong Khai, Sakon Nakhon, Udon, and Udon. This deployment is summarized in Table 3; detailed information on village locations and the number of VDC assigned per village is presented in App C.

(U) (S) VDC in CPM Village Protection Units. The first VPUs were created in Sakon Nakhon in February 1966; many others have been added since then to meet the insurgent threat in the CPM changwats. Information obtained from CSOC² and MOI² and field checked in several areas^{2,7,8-11} indicates that approximately 2,300 VDC are actively serving on active duty in the seven North-east CPM changwats, in addition to those with the 0910 Plan JSTs. These forces serve under the operational control of the CPM commander (changwat governor), with authority often delegated to the appropriate nai amphoe and palad amphoe-security. Table 4 lists VDC deployment in this role; detailed information on village locations and the number of VDC assigned per village is presented in App D.

(U) (S) Beginning in July 1967 approximately 1,000 new VDC members were recruited, trained, and retained on active duty in Tambon Squads. Most were equipped with M1 rifles and deployed to village security functions; they were primarily recruited on a tambon basis. For example, in Amphoe Muang of Sakon Nakhon each of the 16 tambons provided 16 recruits, including, in each case, the kamnan who served as the full-time leader of the squad.¹² Five more men from the changwat seat were added to the group, for a total of 261. Although each tambon provided 16 men, the Tambon Squad is composed of 12 men; the remaining 64 are on active duty at the amphoe for service, support, and reinforcement roles. The 16 Tambon Squads are assigned to villages for security duty in locations determined by the governor and nai amphoe.¹³ Many squads return to their original tambon, but some security-sensitive tambons receive two or three squads while other tambons have none. Activities of one of these VDC Tambon Squads observed in operation in Sakon Nakhon are described below in the section on "Activities."

(U) CPM Security Roles in Addition to Village Protection. There are additional VDC serving on active duty in CPM security roles, outside of the JSTs and VPUs. They provide amphoe and changwat reinforcement elements, guard local buildings and sites, or perform intelligence duties. Reliable data on the full extent of this VDC role is very difficult to obtain. Indications are that each changwat has active-duty VDC members fulfilling such functions. For example, those identified to date include the following: 17 men as a VDC reinforcement element in King Amphoe Don Tan of Nakhon Phanom; 7 VDC as the amphoe strike force and reserve in Amphoe Sawang Daen Din, Sakon Nakhon; 40 VDC on active duty in Amphoe Muang of Nakhon Phanom fulfilling security and intelligence functions; and 13 VDC stationed at two checkpoints in Ubon. Details on the 400 VDC identified in this category are included in App D.

(U) (S) VDC on MDU Security Duty. Each VDU has assigned to it VDC members to provide security for the unit. There are 10 MDUs in the Northeast with a total of approximately 300 VDC serving with them.¹⁴ These men are assigned as individuals from the quota set forth in the annual NSCC allocation. Information on the precise number of VDC security forces with each MDU is unavailable;

²Complete information on the village locations and strengths of this 1967 deployment is not available.

^aApproximate number.

^bThis figure includes both VDC and locally originated security units; information on the division between the two is not available.

NDOs 1, 2, and 3 (Kalasin, Sakon Nakhon, and Nakhon Phanom, respectively) reportedly have the highest number. There are also approximately 150 VDC numbers serving as bodyguards and security forces in the Northeast with various elements of MDI and DOLA.

(U) Future Plans - 1968 Activation for Village Security. Information made available in April 1968 indicates that an additional 1,782 new VDC personnel in the Northeast will be trained during May-November 1968.^a Approximately 1,200 of these will be activated in 100 Tambon Squads following completion of their training. These men will come from 15 amphoes of nine Northeast chang-wats.^a The details of this planned expansion are shown in Table 5. In ten cases the units

^aThroughout the rest of Thailand a total of 1,947 new VDC are scheduled for training in 1968 from 21 amphoes of nine chang-wats, as follows: Chiang Rai-413; Nakhonburi-96; Nakhon Si Thammarat-130; Nan-403; Phetchaburi-120; Phetchabung-110; Prachin Buri-60; Prachuap Khiri Khan-93; and Ratchaburi-120. Approximately 1,350 of these new VDC will probably be retained on active duty following completion of training.^a

being formed are Special Amphoe Companies; in the remaining five amphoes, only Tambon Squads will be trained and then activated, without their organizational superstructure. Information on the planned villages of assignment for these new VDC elements is not available.

PERSONNEL

Recruitment

(U) A candidate for the VDC must reside in the area where recruited; be a Thai citizen; have no mental defects; have a background of good conduct; not be ordained in any religion; not be a member of the Red Cross; and not be an active-duty member of the police or military.

(U) VDC procedures call for the nai amphoes and their staffs to recruit new VDC members. The background of each newly recruited member is supposed to be scrutinized by the same procedure used to clear personnel for the Royal Thai Armed Forces. Each changwat has a security clearance and background investigation committee, headed by the governor. There are indications that some nai amphoes do not rigorously adhere to the list of required qualifications, especially when ordered by the governor to recruit a certain quota in a short period of time.

(U) The 1967 VDC recruited in King Amphoe Kut Bak, Changwat Sakon Nakhon, came from any village or town in that amphoe.²¹ They had to meet the standards expressed above, with certification of good conduct and background made by the respective phuyaiban and kamnan. The age limits were between 21 and 45. The amphoe had 3 months in which to select and check the backgrounds of 93 men. The minimum educational level accepted was Prathom 4.²²

(U) Personnel recruited in 1966-67, especially those selected to meet CSOC requirements, are generally believed to be better qualified and motivated than those recruited in past years. As an example of the availability of manpower for the VDC, when 162 new VDC slots were authorized in Amphoe Khamcha-I, Changwat Nakhon Phanom, it is reported that over 1,000 young men volunteered.²³

Pay

(U) VDC members are paid only when on active duty or during periods of authorized travel. The VDC per diem scale is as follows:

²⁴Four years of elementary school. See the glossary for a description of the Thai Education System.

RANK	PAID PER DAY	TOTAL FOR FULL MONTH
Private	14	420
Sergeant	16	480
Platoon Leader	18	540
Third-Class Officer	28	840
Second-Class Officer	32	960
First-Class Officer	34	1,020

(U) The actual pay scale for VDC serving on active duty varies to a certain extent between areas, depending on local decisions. Most JSTs and VFU members in the Northeast reportedly receive special allowances so that their total pay equals that of a VDC sergeant (\$480/month).⁶ Those VDC participating in the JSTs and VFUs are paid by CSOC; they are reported to receive their pay in full and on time.

Promotions

(U) A VDC member may be promoted to the rank of sergeant or acting squad or platoon leader if he has attended the proper leadership courses given by the RTA's TDO and has maintained a good service record. Indications are that, in practice, VDC promotions rarely occur.

TRAINING

(U) The RTA is responsible for the conduct of VDC training, of which there are four types: (1) annual training for VDC Changwat Companies; (2) initial and refresher training for Border Amphoe Platoons and Special Amphoe Companies; (3) leadership courses for selected VDC unit commanders; and (4) on-the-job training through participation in RTA unit exercises. All VDC units are brought up to full strength for initial training.

Changwat Company Training

(U) The VDC Changwat Companies receive a 15-day training session under the direction of the RTA. These units are given predominantly field training, covering marksmanship, squad tactics, and individual military skills. A 1965 study of the VDC indicated that this "annual" training reaches any given company only once every 5 or 6 years.⁷

Border Amphoe Platoon and Special Amphoe Company Training

(U) (U) NTFs from the RTA give both initial and refresher training to the Border Amphoe Platoons and the Special Amphoe Companies. Emphasis is placed on training the Tambon Squads. Initial training is for 4 weeks (176 hours), and refresher training covers 2 weeks (97 hours). Training is conducted under the general supervision of the nai amphoe, assisted by NTF leaders. Refresher training is usually scheduled to begin after all amphoes in a changwat have received their initial training; it occurs on an annual basis.

(U) Table 6 presents the basic VDC training schedule.⁸ It covers 14 major subject categories. Refresher training generally covers the same subjects, but emphasizes employment and maintenance of individual weapons, combat tactics, village and tambon defense and security practices, reconnaissance and search techniques, ambush, counterambush, communications, psychological warfare, civic action, and first aid.⁹ The daily training schedule used in September 1967 for the VDC in Amphoe Don Tao, Changwat Nakhon Phanom,¹⁰ is presented in Table 7. As can be seen, the actual schedule used in this case does not necessarily follow the basic schedule shown in Table 7, and, in fact, it appears somewhat more extensive in terms of subjects covered.¹¹

(U) In the Northeast NTFs that give this training have been formed by personnel from the following RTA units: 3d RCT, 6th RCT, 13th RCT, 6th Cavalry Bn, Special Forces, and 1st Aerial

⁶It is interesting to note the curriculum for the 1960-1966 hour time period which covers subjects dealing with Thai history and culture, patriotism, sacrifice, unity, and bravery. This is very much like the "political and motivational" training given to the PAFs at Camp Sam Son, Ban Hin. Microfilms in Bangkok, however, have indicated that the PAFs were the only village security element in Thailand known to receive this kind of motivational training. There was no apparent knowledge of this kind of training being given to the VDC. Table 9 shows a total of 16 hours which might contain this kind of instruction.

Delivery Bn. Much of the 1967 training was given by RTA Special Forces MTIs. The composition of a typical MTI is shown in Table 8.

Leadership Training

(U) Leadership training courses are given to selected VDC unit commanders and leaders. Training for VDC company commanders was completed in 1965. Three courses at the platoon-leader level were held in 1966. In November 1966, the 46th Company, US Army Special Forces, provided a short course of instruction for 22 VDC members from Mong Khai.

(U) There are currently some 200 or more PP, plus some RTA members, serving with active-duty VDC elements as cadres and leaders. The men cannot be returned to their parent organizations until an equivalent number of effective VDC NCOs are trained. To expand VDC leadership training, two related courses of action are under consideration. One is to establish a VDC Leadership Center at Camp Narai, Lop Buri, under the RTA Special Warfare Center. Either a 4 or 8-week course would be given to selected NCOs by the RTA Special Forces. The other alternative is to train VDC NCOs at Camp Nam Phung, the combined RTAF/USAF training site in Chanvut Sakon Nakhon. The VDC would be trained between regular cycles of RTA company-level counterinsurgency training currently being conducted at the camp.⁹

EQUIPMENTWeapons

(U) The standard VDC weapon is the M1903 rifle (Springfield). Some M1 rifles, M1 carbines, and M3 submachine guns are also in use, and some VDC officers are issued a .45 cal pistol. VDC assigned to the MDUs use carbines belonging to the Supreme Command.⁹ Weapons for VDC units not on active duty are stored either in the armory of the changvat PP, or in the TNPQ quartermaster warehouse in Bangkok. Ammunition is purchased from the RTA. For 1968 the VDC has requested 300,000 rounds of ammunition for use in annual training.⁹ Information on the amount of ammunition available to those VDC serving on active duty with CSOC, JSTs or CPM VPUs is not available, but its source is either CSOC or the RTA.

⁹These were provided by the US Military Assistance Program (MAP) in 1966.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(U)

Table 8
MOBILE TRAINING TEAM PERSONNEL

MEMBER	INSTRUCTION DUTIES
Team Leader-Captain	Tactical subject, Intelligence
Deputy Team Leader-Captain/Lt	Demolitions
Master Sergeant/Sergeant	Weapons instruction, tactical subjects
Master Sergeant/Sergeant	Explosives and demolitions
Master Sergeant/Sergeant	Signal communications
Master Sergeant/Sergeant	First Aid
Sergeant/Lance Corporal	Truck drivers (no instruction duties)
Master Sergeant/Sergeant	Mechanic (no instruction duties)

(U) Many of the VDC trained in 1967 by the RTAF received M1 rifles and carbines rather than the older M1903. These VDC also received hand grenades as standard issue. For example, a 12-man squad observed in Amphoe Huang, Changwat Sakon Nakhon, had 11 M1 rifles and one carbine, plus hand grenades. The carbine was being carried by the squad leader, the local kamnan.⁸ These M1 rifles are on loan from RTA stocks and do not belong to the VDC.⁹ The RTA loaned 1,400 M1 rifles and 200 carbines to the VDC for the 1967 activation.

(U) Weapons pose a potential problem for the 1968 activation for which men will begin training in May 1968. For the 4,000 new VDC to be trained and activated throughout the country, there are available 382 M3 submachine guns (remaining from an original US-support package of 506), 300 carbines, and 800 M1 rifles on loan from the RTA.⁹ The remaining 2,500 weapons must either come from additional RTA loans of rifles and carbines, drawing down the weapons held for reserve VDC units in the event of activation, or from some 1,300 8-mm Japanese rifles, vintage 1920 (originally purchased for use at the RTA Military Academy and now loaned to the VDC along with 140 rounds of ammunition per weapon).⁹ It is hoped that the RTA will be able to make available to the VDC additional modern weapons in 1968.

Uniforms

(U) VDC members are issued one set of forest-green fatigues (cap, jacket, trousers), one pair of jungle boots, a rifle belt, and a canteen. Officers receive two sets of fatigues. The VDC insignia is distinctive and resembles the Thai civil administrative insignia.

Communications

(U) The VDC does not have an integral communications system. The standard tambon radio from the Village Radio System (VRS) is supposed to be available for VDC use as required. Those active-duty VDC who serve with PP or RTA cadres (or with the MDUs) may have access to police, Army, or MDU radios; some active elements are provided radios by CSOC. In several cases, VDC units have been observed with FM-1 or FM-5 radios from the VRS. When the kamnan is serving as the active head of the VDC Tambon Squad, the radio provided to him through the VRS is generally moved to the VDC defensive compound.

(U) (C) The JSTs in 0910 Plan Areas are supplied radios for their use by CSOC. For example, in Target Area 11, Amphoe Lahan Sai, Changwat Buri Ram, CSOC is reported to have supplied 20 TR-20 radios and 18 "walkie-talkie" sets to the JSTs (composed of three PP and nine VDC each). Each of the 12 villages in this Target Area is assigned one TR-20 radio, with the remaining eight sets kept in reserve at the Target Area Control Headquarters. These JSTs report to the control headquarters five times per day, and the control headquarters reports to changwat seven times daily.⁸

(U) CSOC has been provided 200 FM-1/5 radios for use with JSTs and VPUs. Most of these sets are with the VDC-manned elements in the Northeast.

ACTIVITIES

(U) VDC activities generally fit into three categories: VDC as elements of village security forces; VDC as elements of strike units; and VDC as sentries and security guards.

UNCLASSIFIED

VOLUNTEER DEFENSE CORPS

25

VDC As Elements of Village Security Units

- (U) (C) The most important and widespread use of VDC members in the Northeast has been as village security elements. Beginning in early 1967, with initiation of CSOC's 0910 Plan, governors in the seven CPM changwats began the practice of combining two or three police or military cadres with 9 to 12 VDC. This type of unit, called a "Joint Security Team (JST)," was designed to act as a defense force for villages in designated security-sensitive areas. These villages, on the fringe of CT base areas, were the targets of insurgent recruitment, food collection, and propaganda activities; placement of forces in these villages was designed to cut off the insurgents from the population in villages near to their bases while other forces pursued the insurgents within the base area. Thus, the JSTs, as the primary village security force, are in many ways the most important elements of CSOC's 0910 Plan. In addition to VDC assigned to 0910 JSTs, other VDC fulfill a village protection role in the VDC-manned CPM Village Protection Units, separately employed to provide village security in selected locations outside 0910 Areas. Some of these units have police cadres; others are entirely VDC manned. Use of VDC on active duty in a village security role in fact antedated the initiation of the 0910 Plan, as they were first so used in Sakon Nakhon in February 1966.¹
- (U) (C) The activities of JSTs and non-0910 VDC village protection elements are basically very similar. The units establish a fortified position of varying effectiveness somewhere in the village. Usually, although not always, this team position is located in the village vat. Rarely, if ever, is the VDC security element located outside the village confines; it is either in the center of the village surrounded by village houses, or it is located on one edge of the village with houses to one side and open fields or rice paddies to the other. The team location usually is fortified with sandbags or rudimentary bunkers; other defensive positions are often constructed, and the team radio is set up with a bamboo-pole antenna rig. Brush may be cleared to improve fields of fire. In some cases a nearby helicopter landing zone may be selected, cleared, and marked. The team position is guarded 24 hours per day, with usually two VDC on guard on a rotating shift throughout the night.
- (U) (C) In addition to their armed presence in the village the primary VDC defensive measure is the conduct of armed patrols. Patrols seem to range in size from three to 10 men, depending on the size of the team and the local threat environment, and are supposed to occur daily; night patrols are probably much less frequent, although they do occur. Patrols may range throughout the village in which the team is located, into the nearby fields, and occasionally into nearby hill areas. Patrols may involve setting ambush positions as well as armed movement through an area. When intelligence information (collected by the VDC element or passed to it from another friendly force) indicates the likely presence of armed insurgents, setting of ambushes on trail entrances and exits from the village--and night patrols--are much more likely. For example, field observations determined that the VDC members of JSTs in Target Area 11A, Amphoe Lahan Sai, Changwat Buri Ram, conduct short patrols both day and night. These patrols go through the village in which the VDC are stationed, and into nearby areas as well.² The VDC unit stationed at Ban Nong Phak Thiam, Amphoe Phanna Nikhon, Changwat Sakon Nakhon, also observed in the field, conducts day and night patrols, and ranges out several kilometers from the village when information indicates the possible presence of armed insurgents.³
- (U) (C) VDC village security units may be ordered by higher echelons to respond to a reported CT sighting, or to an incident or clash between CTs and friendly forces. The only reaction force in Amphoe Sawang Daen Din, Sakon Nakhon, for example, which is directly responsive to the nai amphoe, is composed of seven VDC with mobility in the form of a truck. When the PAT at Ban Kham Ta Na in that amphoe came under insurgent attack in August 1967, these VDC, plus another nearby PAT, formed the only RTC reaction force to reach the beleaguered team before daybreak, even though they arrived several hours after the insurgents had broken contact and disappeared into the forest.⁴ When the schoolteacher in Ban Kho Noi, King Amphoe Kut Bak, Sakon Nakhon, fought off many armed insurgents by himself, it was a local VDC unit which the amphoe dispatched to his aid, and which, in fact, reached the village while the fight was still underway.⁵
- (U) (C) Another function of the VDC elements assigned to village security positions is to collect information about the insurgents in their area of operations. Little data are available to judge the effectiveness of VDC information collection activities, but amphoe and changwat officials in Sakon Nakhon, for example, report that the teams do collect and report important items of information.⁶
- (U) (C) Some VDC elements providing village security in the Northeast engage in local development and self-help projects, although this kind of activity is not specifically part of their assigned mission. In Amphoe Lahan Sai, Changwat Buri Ram, VDC in the local JSTs have occasionally provided assistance to village development projects.⁷ In Sakon Nakhon (especially in areas where the PAT elements have been engaged in such work as a specifically assigned mission), VDC elements also seem to be participating. In Ban Maet of Amphoe Muang, Sakon Nakhon, for example, the local VDC Tambon Squad (part of the 1967 VDC activation and headed by the kamnan) was observed to be working with villagers and PAT members from a nearby village in bridge repair activities. In Ban Nong Phak Thiam, Phanna Nikhon, where the VDC and PAT share the same compound

CONFIDENTIAL

UNCLASSIFIED

PARAMILITARY ORGANIZATIONS AND PROGRAMS

in the village wat, villagers report that both the VDC and PAT help the villagers in house repairs, road construction, and similar projects."

- (U) (G) VDC units assigned to village security duty often are involved in conducting local-level population and resources control programs. This primarily involves issuing and checking passes for villagers who desire to leave the village for another area. The villager, prior to departing, must check with the unit, state his reason for leaving, planned destination, and expected time of return. Some teams issue special passes, others simply check to be sure the villager's regular government identification card is in proper order. Movement control programs enforced by the VDC are operating in Amphoe Waritchaphum, Phanna Nikhom, and Muang of Changwat Sakon Nakhon.¹⁰ In Changwat Ubon VDC are assigned to men designated checkpoints.
- (U) (C) The VDC on numerous occasions during the past 2 years have engaged in clashes with armed insurgents in the Northeast. Information on these incidents other than the data presented here is not available. Between the months of January 1967 and May 1967, CSOC-supplied information indicates that the VDC-manned JSTs in O910 Target Areas clashed 40 times with armed insurgents. This gives an average of about four clashes per target area for this period and a monthly average of eight clashes for VDC JSTs. Since there are a total of 151 JST elements with VDC assigned (as listed in App C), 40 total clashes in 5 months means that in this relatively short period of time more than one team in four clashed with the insurgents. This figure of 40 clashes covers only VDC in JSTs, and does not include clashes between O910 strike forces and the insurgents, or between insurgents and VDC village security elements outside the O910 Areas.

VDC as Sentries and Security Guards

- (U) (G) VDC activities in this category include acting as security guards for MDU's, as personal bodyguards for changwat and amphoe officials, and as sentries and guards for various CPM field elements and for selected changwat facilities. The VDC attached to MDU-9 headquarters in Changwat Ubon are unarmed. Their weapons are kept at the amphoe headquarters, several kilometers distant. These men help the MDU teams in local civic action projects, both in the headquarters compound and in nearby villages. They do not conduct patrols.¹¹

VDC as Elements of Strike Units

(U) VDC members have on many occasions during the past 2 years been used in conjunction with other RTC security forces in sweeps and other operations conducted by these forces. The VDC are usually assigned to act as a blocking force, while the other elements conduct the active portions of the sweep. Other members may be tasked to serve as guides, or to participate in patrol operations.

INTERRELATIONSHIPS

National Level

(U) At the national level the VDC Committee is responsible for formulating policy and guidance for the VDC. Participating ministries, plus CSOC and NSC, all interrelate in support of the VDC program.

- (U) (G) The Chairman of the VDC Committee, General Praphas, is the Minister of Interior as well as Commander-in-Chief of CSOC (plus being Deputy Prime Minister and Commander-in-Chief of the Army). The Director-General of DOLA and the Chief of the Volunteer Defense Division, DOLA, are civil representatives at CSOC. The Chief of the VDD (who is for all practical purposes the acting commander of the VDC) is a Deputy Commander of CSOC's Operations and Coordination Center (that part of CSOC which plans operations). The Chief of Staff of the RTA, a member of the VDC Committee, is also Chief of Staff of CSOC. The Chief of Staff of the Supreme Command Headquarters, another member of the VDC Committee, is a Deputy Commander of CSOC as well as being on the NSCC Policy Board. The Minister of Interior, Chairman of the VDC Committee, is also a member of the NSCC.

Regional Level

- (U) (G) The VDC Regional Headquarters in the Northeast responsible for VDC "tactical operations" (as defined by VDD) has had little opportunity to exercise its functions primarily because no VDC units have been called to active duty as complete entities, and, consequently, they have not required tactical logistics and administrative support. The regional headquarters are collocated with PP Region Headquarters and they relate directly to the PP at this level. Certain aspects of the TNPD logistics role with regard to the VDC may be coordinated at this level, although most such coordination takes place between TNPD and DOLA/VDD in Bangkok.
- (U) (G) Another regional-level organization concerned with VDC employment is the RTA's Second Army Headquarters (Forward) located at Sakon Nakhon. This organization keeps records of the loca-

~~CONFIDENTIAL~~

UNCLASSIFIED

VOLUNTEER DEFENSE CORPS

27

tions of deployed VDC security elements in the villages in the Northeast, coordinates with the governors and nai amphoes concerning the details of VDC employment, and (on occasion) uses VDC elements to support Army suppression operations.

Changwat Level

(U) The governor has the authority to call VDC units or individuals to active duty, but usually passes this power on to the particular nai amphoe. The nai amphoe is then responsible for filling the requests for recruitment, coordinating with the RTA for training, and calling individual VDC to fulfill changwat (CPM), CSOC, or MSCC requirements. The nai amphoe often delegates this work to the palai amphoe-security, who is usually an RTA officer assigned to DOLA to assist the nai amphoe in running the VDC program.

- (U) (C) The changwat CPM is directly concerned with VDC tactical employment and security activities. This includes the governor (as CPM commander), the RTA military advisor and the CPM staff who are involved on a full-time basis with village security and counterinsurgency matters in the changwat. There is a palai changwat for security or protection who is responsible for VDC matters, as well as for VSO, PAT, or other similar security elements. The changwat PP Chief also deals with the VDC on a regular basis, as do the police at amphoe and tambon level. Police-VDC relationships concern tactical employment of security forces and police logistics support for deployed VDC elements. Those VDC assigned to security duties with MDUs operate under the control of the local MDU commander, and relate directly to that organization.

Village Level

- (U) (C) VDC elements deployed in a mission of providing village protection relate to many other RTG organizations operating in the same area. This is true for both the VDC assigned to the 0910 JSTs and the VDC operating as village protection forces outside the 0910 Areas. Many VDC elements have police assigned as cadres who usually act as their leaders. Often these police leaders are experienced NCOs, who are able to impart their experience and training to the VDC unit. In some cases the local khaman fills this role and leads the VDC village unit.
- (U) (C) Relationships with Tambon Police. When police from a tambon station patrol through a VDC village, they usually contact the VDC members in the local area. The VDC unit when it collects information will usually report it to the nearby tambon police station, if there is one. In reverse, information collected by the tambon police station, or by another unit and reported to the police, may in turn be passed down to the village VDC. At times the nai amphoe might direct the VDC to act on this information with a patrol or ambush. An interesting case, whether typical or not, of VDC-tambon police relationships occurs in Ban Kham Bit, Amphoe Waritchaphum, Sakon Nakhon. The police station in this tambon has only one policeman assigned; the remainder of its forces are 10 VDC and one teacher (who was, in fact, the commander of the station). The tambon police station in Ban Kham Muang, Amphoe Sahatsakhan, Changwat Kalasin, visited in March 1968, housed the CPM control team for the five VDC protection units stationed in nearby villages. This control team, headed by a palai changwat, was composed of eight VDC and six PP. There was no tambon police station operating as such, although the control team occupied the police building.¹⁰
- (U) (C) Relationships with RTA. VDC may be located in villages where RTA suppression operations are underway. When this occurs, the VDC may be asked by the Army to provide a blocking force, local information, a guide, or similar assistance. In some areas, including Sawang Daen Din, Sakon Nakhon, and Pla Pak, Nakhon Phanom, RTA elements are assigned to the same villages as the VDC.
- (U) (C) Relationships with PAT. VDC contacts with PAT elements, especially in Sakon Nakhon where most of the PATs are operating, are frequent. In several instances the PAT and VDC actually live together in the same village, providing protection and village development stimulus. In Ban Mong Phak Thiam, Phanne Nakhon, Sakon Nakhon, the PAT and VDC live together in the village unit. They patrol together, conduct development projects together, stand guard duty together, and share cooking responsibilities. In another case where the two elements were residing together, when the leader of one unit was absent the other leader acted as head of both VDC and PAT. In many instances VDC village units near to PAT village locations pass messages for the PATs, which are not provided with FM-1 and FM-3 radios. In one village the VDC and PAT arranged to share responsibilities for local resources-control measures. The VDC unit was empowered by the nai amphoe to grant permission to travel to another village, but both units checked villagers when they leave to visit another village.¹¹
- (U) (C) Relations with VSO. In certain areas of the Northeast, especially Nakhon Phanom, VDC and VSO elements operate in close relationship to one another. Since they are both under the control of the nai amphoe, coordination is not too difficult to effect. The units may patrol together, provide security in the same village, and otherwise support one another.

UNCLASSIFIED

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(U) Relationships with Village Radio System. This system provides most of the radios available to VDC village security elements, at least outside of 0910 operational areas where CSOC-CFM radios may be provided. This means that the VDC unit usually has the use of the VRS FM-1 or FM-3 set as its primary means of communication. The placement of these radios and deployment of VDC village teams, however, is not coordinated, and on several reported occasions the location of the radio was altered with the arrival of the VDC unit so that the security team could have use of the radio in its assigned village.

(U) (C) Relationships with the Census Aspiration Program. In many VDC-secured villages of Sakon Nakhon, where the CA program is primarily operating, there is a resident CA village cadre. The CA man gets security from the presence of the VDC, and the VDC may get information on insurgent activities and villager aspirations from the CA program. Coordination is effected through the changwat governor.

(U) Relationships with Mobile Medical Teams. In certain villages with VDC, RTG Mobile Medical Teams (MMTs) visit to provide medical assistance to the villagers. The team, while in the village, may set up its activities near the VDC site and the presence of the VDC element provides the MMT with protection from insurgent attack. The same is true of USIS Mobile Information Teams, which also may visit villages having VDC.

(U) Relationships with CD and DDP Programs. The primary VDC-CD relationship occurs in those VDC villages in which CD has trained the local village Development Committee (through the CD Village Leader Training program). The existence of such a committee in the village may influence VDC activities or employment. The same statement may be made about the DDP tambon council training program.

US Assistance to the VDC

(U) As of March 1968 there was no program of direct US assistance to the VDC in the form of funds, advisors, or commodities. Some US training assistance was provided, however. Relations between the US Mission and the VDC occur primarily at the level of the VDO and RTA G-3. The primary US contacts with the VDC program are JUSMAG's Army Advisory Group and those elements of USOM which deal regularly with DOLA and the VSF.

PROGRAM EFFECTIVENESS

- (U) (C) Because of their selection, training, morale, and other related factors, many of the VDC elements deployed in counterinsurgency assignments in the Northeast have little impact in their assigned villages other than providing an armed government presence. However, those VDC activated in 1967 (who are armed with M1 rifles and who have been trained by RTA Special Forces) give indications of representing a major improvement over the earlier groups.
- (U) (C) The joint USOM-MACTHA? Evaluation conducted in 1965² concluded that although the VDC is hindered by a reliance on government officials acting as unit leaders (such as nai amphoes and school teachers, who have other primary duties) and by insufficient training and communications, its long tradition as a paramilitary force and its members' familiarity with local areas forms a sound basis for a counterinsurgency unit.

VILLAGE SECURITY OFFICERS

SUMMARY

- (U) (C) The Village Security Officers (VSO) program was initiated in mid-1966 as a joint DOLA/USOM pilot project to determine the feasibility of training and arming phuyaibans and selected village members to prevent the spread of insurgent activity. The first VSO members completed training in December 1966. As of April 1968, about 1,000 VSO from five amphoes in Changwat Nakhon Phanom had been trained; approximately 600 of them are serving on active duty. Another 300 VSO, from Changwats Kalasin, Sakon Nakhon, and Ubon, have been trained and approximately 200 of them are actually on duty.
- (U) (C) Although the original VSO concept called for operations in the villages from which the men were recruited, the insurgent threat in many of these areas (and the relatively short-range VSO weapon--the shotgun) forced the VSO to aggregate in larger groups. The active VSO in Nakhon Phanom are serving in 50 villages in teams of 6 to 23 men. VSO phuyaibans receive 4 weeks of training; all other VSO members receive 3 weeks' training. When on active duty they are paid \$2.00 per month. Many lessons have been learned from the VSO experience that are of value to the developing Village Security Force (VSF) program.

MISSIONS

- (U) The missions assigned to units made up of VSO personnel are: (1) to provide protection to the villagers; (2) to act as a source of intelligence; (3) to provide armed government presence at the village level; and (4) to assist the overall RTC counterinsurgency effort.

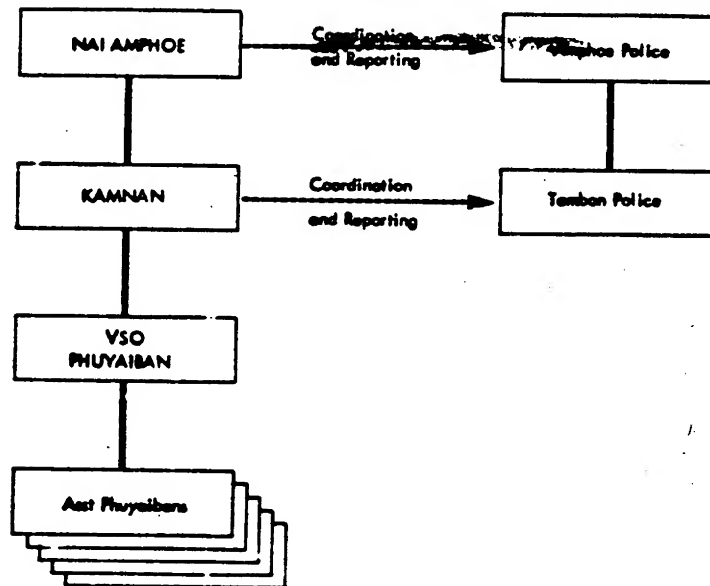

ORGANIZATION

- (U) The VSO members operate under the direct control of local DOLA officials. Each unit is led and administered by the phuyaiban, himself a VSO member. All other VSO members are appointed assistant phuyaibans to give them the authority to arrest lawbreakers. The phuyaiban reports to the kamnan who, in turn, reports to the nai amphoe.
- (U) Technical advice, training, and commodity support for the VSO are provided by the FP. All reports, especially VSO radio reports, are supposed to be coordinated through nearby tambon and amphoe police stations.
- (U) VSO organizational structure is presented in Fig. 9.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(U)

Fig. 9: ORGANIZATION OF THE VSO PROGRAM

FUNDING

(U) RTC funding for the initial phase of the VSO program (FY67) came from the Department of Technical and Economic Cooperation (DTEC) and DOLA in the amounts of \$150,000 and \$1,260,000, respectively (\$1,410,000 total).¹ US funding during this same period was provided by USOM in the amount of US \$110,000. Funding for the program in 1968 is covered under the new VSP budget.

LOCATIONS AND STRENGTHS

Deployment Concept

(U) (G) The initial VSO deployment concept called for placement in villages which were not dominated by the insurgents but were subject to future insurgent subversive attack. In many areas this concept was not implemented as VSO units were deployed in some of the most security-sensitive areas of the Northeast. Additionally, the VSO teams were originally to be deployed in and responsible for their own village.² However, after three teams were overrun by insurgents, DOLA modified the deployment concept to allow some teams to aggregate as sector or tambon units for greater strength and protection.³ Available data on VSO deployment indicate that a mix of individual village VSO units and sector forces is the actual case in early 1968. Of the 50 units on active duty in Nakhon Phanom, 35 are village elements (six to nine men) and 15 are sector forces (10-100 men).

Areas of Recruitment

(U) (G) The initial phase of the VSO program recruited 625 VSO from 92 villages in Changwat Nakhon Phanom, and after training returned these men to their villages in 5 to 12-man units. These 92 villages are located in the following five amphoes: Khamcha-I, Mukdahan, Wa Kae, Fla Pak, and That Phanom. At the end of September 1967 the number of villages in Nakhon Phanom provided VSO was increased to 136, and the number of VSO increased to 1,021 men.

(U) (G) In August 1966, 100 VSO were trained for Changwat Ubon; 40 came from eight villages in Amphoe Det Udon and 60 from 12 villages in Amphoe Khamarat. At the end of September 1967 an additional 100 VSO were trained from 16 villages in King Amphoe Ban Muang,⁴ Changwat Sakon Nakhon, and 100 from 20 villages in Amphoe Kuchinarai, Changwat Kalasin.

(U) Table 9 summarizes available information on areas of VSO recruitment, and Fig. 10 shows these locations and the number of VSO personnel trained per amphoe.

⁴ At that time, these villages were a part of Amphoe Nakhon Phanom.

Changwat Total		San Rang	8	40
			20	100
Total VSO Recruitment			192	1,314

Active Deployment

(U) As of early 1968 there were approximately 800 VSO members serving on active duty of the original 1,314 trained and armed. The number permitted on active duty at any one time is restricted by budget limitations to approximately 40 percent of the total.⁴ To provide needed security protection, the VSOs often operate in an aggregate group of 10-25 men (called a "sector force"). Those VSO members not serving on active duty remain in their original villages. Since they keep their weapons with them, off-duty VSOs could presumably defend themselves and their villages if threatened. The locations of active-duty VSOs and their numbers by amphoe are shown in Fig. 11.

(U) Deployment in Nakhon Phanom. The active-duty deployment of VSOs in Nakhon Phanom in January 1968, based on best available information, totaled 399 men.^{4,6,7} They are stationed in 50 village locations in groups of 6 to 100 men. Table 10 lists the number of VSOs serving on active duty in Nakhon Phanom and their village locations. The remaining 422 VSOs are in their home villages.

(U) Comparing the data in Tables 9 and 10 produces some interesting results. VSO active deployment in the two tambons covered by the program in Amphoe Mukdahan is almost identical with that called for in the original VSO concept. Of the 142 VSOs trained, 141 were counted as active-duty forces in January 1968. They were serving in the same 22 villages from which they were recruited in units of five to seven men per village. In Amphoe Khamcha-I, however, the opposite is true. Although 112 men were originally recruited from 15 villages in one tambon, in January 1968 only 19 VSO members were on active duty in one location (the "tambon seat"). Another variation of the pattern may be seen in Amphoe Na Kae which has two VSO tambons. In Tambon Na Khu all 100 VSOs are reportedly on active duty, but grouped in one location. In Tambon Nong Sang, 90 of the 97 trained VSOs were reportedly on active duty. They were serving in seven villages, as opposed to the 13 villages from which they were originally recruited. A similar situation prevails in the one VSO tambon of Amphoe That Phanom, where 93 of the 102 VSOs are on active duty, grouped into six of the original 14 villages.

*The distribution in this tambon is not known; it is believed that all are serving in the village of Ban Na Khu.

Jan 1968

(S) (U) In January 1968 there were 156 VSOs serving on active duty in 13 locations in King Amphoe Pia Pak out of 468 trained. This compares with the 66 villages from which they were originally recruited.

(U) (U) Deployment in Sakon Nakhon. All the 100 VSO members trained in King Amphoe Ban Muang are reportedly serving on active duty. For mutual protection they are grouped in one village, Ban Mai.^{4,8} Presumably at any one time some of these 100 men are on leave in their home villages, with the number on duty in Ban Mai commensurately reduced.

(U) (U) Deployment in Udon. In Amphoes Det Udon and Khemarat 100 VSOs have been trained. The only available information on their duty status indicates that all 100 men are on active duty; details of their locations were not available.⁹

(U) Deployment in Kalasin. Of the 93 VSOs trained from 20 villages in Amphoe Kuchinarai, few are reportedly serving on active duty.⁹ Visits by researchers to this area in March 1968 unearthed little evidence of VSO deployment in an active village defense role.⁹ Two VSO members in uniform with a shotgun were identified in the 11 villages visited. One more was seen in the amphoe town.

Future Plans

(U) (S) Initial programming for the VSO project called for recruitment of VSO as follows:¹⁰

FY66	1,325
FY67	1,100
FY68	1,100
FY69	2,000
Total	5,525 (from 800 villages)

However, during 1967 steps were taken to begin development of the new VSF. As a result, VSO recruitment will not be implemented beyond the 1,321 men already trained. The VSF, to be initially trained and deployed in Changwat Kalasin, Sakon Nakhon, and Udon (plus Prachinburi Khiri Khan outside the Northeast), will be village-based, receive PAT-type training, and conduct and stimulate village self-help projects as well as provide village protection. It will be an extension of the VSO structure. Plans call for approximately 20,000 VSF members to be trained and deployed. Existing VSO units and members will be absorbed into the VSF as the new program reaches their area of operation; no new VSO members will be trained. Most of the current VSO members will receive VSF training and exchange their VSO shotguns for VSF carbines or rifles when the program reaches their tambons; those not selected for VSF will be "demobilized."

PERSONNEL

Recruitment

(U) In each VSO village the phuyaiban is the unit leader; he selected the assistant phuyaibans

CONFIDENTIAL

UNCLASSIFIED

PARAMILITARY ORGANIZATIONS AND PROGRAMS

to receive VSO training with him. The men selected were then approved by the kamman and the nai amphoe.

(U) A joint Thai/US evaluation of the VSO in mid-1967 found that most VSO members are family relatives of a phuyasaban, kamman, or nai amphoe.¹¹ This study also found that there are no minimum educational requirements for the VSO and that some were illiterate. There are no minimum health standards, and approximately 45 percent of the units reported having men sick with such illnesses as diarrhea or malaria. Furthermore, this evaluation found that there was no biographical investigation of prospective VSOs, and that some were suspected of having communist associations.

Pay

(U) Active-duty VSO members are each paid \$50 per month and a per diem of \$6 when serving on duty in their village, and \$16 when stationed elsewhere. This provides a monthly gross income for active-duty VSOs of \$230-\$30. The evaluation found that many of the VSOs complained that they were not paid on time and, in some cases, did not receive all the pay and per diem that they had been promised.¹²

TRAINING

(U) All VSO members, including phuyasabans, have received 3 weeks (145 hours) of training, the first 2 weeks of which are at the PP Chaiya Training Center in Udon, and the third week in the amphoe from which they were recruited. Phuyasabans received an additional week (39 hours) of special leadership training prior to the main course conducted at the Chaiya Training Center. Table 11 presents information on the subjects taught to phuyasabans during the special leadership course while Table 12 lists the subjects taught to all VSOs.¹³ Instructors were furnished by the PP and DOLA.

(U) Some VSO members received a short period of in-service training in April 1967. This training was conducted by personnel from DOLA, PP, and BPP. Subjects taught were: counterambush and counter-raid techniques, withdrawal under fire, practical firing, and political training. The USAF 56th Air Commando Wing in Nakhon Phanom provided aerial support and instruction on receiving air drops and marking drop zones.

(U) The joint Thai/US evaluation found that VSO members wanted more training in first aid, weapons repair, patrolling, and information collection. This joint evaluation also found that some of the subjects taught were too complicated for the VSO members. There was an inability to convey knowledge during the training owing to instructor unpreparedness, lack of handout materials, and illiteracy on the part of some VSO members. In addition, some of the instructors could not speak the local dialect.¹⁴

EQUIPMENTWeapons

(U) Each VSO member is issued a 12-gauge pump shotgun and 25 rounds of ammunition. The VSO Evaluation found that there was some dissatisfaction among VSO personnel with the shotgun as a weapon of issue. Those interviewed tended to feel the shotgun did not have sufficient range and limited their effectiveness. The carbine was generally preferred. Complaints were also expressed about the quality and amount of ammunition provided. Evaluation teams also found that many of the weapons were in need of repair and that there was a shortage of equipment.¹⁵ There appears to be no fixed regulation governing arms repair and maintenance for the VSO organization.

(U) Questions have also been raised in the US Mission about the adequacy of VSO weapons, especially in view of the fact that the VSO are deployed in security-sensitive areas (as opposed to the original deployment concept which called for placing VSO elements in non-threatened areas). The insurgents in these VSO operational areas generally have superior firepower, such as carbines, rifles, and submachine guns.

Dress

(U) The administrative official's uniform (khaki shirt and trousers) is authorized for the VSO. Approximately one-half of the VSO have field uniforms (fatigues and jungle boots). Those with-

¹¹Although the information in these tables is for courses taught in September and November 1966, it is fully representative of all VSO training.

out field uniforms are scheduled to receive them when funds become available. There is no official VSO insignia, but DOLA is preparing a special ID card for issue to each VSO.

Communications

(U) Radios. Approximately 55 FM-1 radios have been made available for VSO use. Eight of the 18 VSO tambons shown in Table 1 have tambon police stations which have radios installed. VSO radio frequencies are the same as the tambon police radios. USOM is reported to have ordered an additional 75 FM-1's and 75 FM-5's for the VSO.

(U) Air Panel Communication System. Each VSO phuyaiban has been provided with four large colored panels (red, yellow, blue, and white) which are displayed (either individually or in combination) to communicate with an aerial observer flying a predetermined route twice a day. The aerial observer logs messages observed and airdrops the log to the tambon police station for action or information as required. It has been alleged that villagers have little confidence in this system because of past failures to respond to messages of "CTs in the area." However, the system is still used to signal "all okay," and "need medical supplies," "need commodity support," and so on.

Logistical Support

(U) VSO logistics are provided by the PF. It is reported, however, that the PF no longer provide ammunition backup through PF channels to VSO units in the field. Instead, they provide the VSO Director at the Chaiya Training Center in Udon with the initial ammunition issue for each man. An exception to this exists for VSO units stationed in CSOC's 0910 Areas which receive ammunition from CSOC. This practice results in some VSO units having sufficient ammunition while others do not.

ACTIVITIES

(U) VSO activities are grouped into three categories: village protection, intelligence collection, and the conduct of civic action projects.

^aA total of nine combinations can be made to communicate different messages; e.g., the red panel alone means "CTs are in the area"; the blue panel alone means "everything is okay"; and all four panels displayed together means that the village is under attack.

VILLAGE SECURITY OFFICERS

41

Village Protection

(U) (C) VSO village protection activities are similar to those of other paramilitary units. Their presence in a village deters insurgents from collecting food or conducting recruiting and propaganda activities. Those VSO aggregated in tambon units conduct patrols from one village to another within the tambon. Some VSOs in Nakhon Phanom participate in Joint Security Teams in 0910 Plan Target Areas (see APP C, Tables C7, C8, and C9) and in CPM village protection units (see APP D, Table D3). An added benefit of the deployment of VSO has been a decrease in crime in the villages to which they are assigned. This was considered equally important with insurgent suppression by the villagers interviewed in the course of the aforementioned evaluation. By the end of May 1967, VSO members had engaged in 23 encounters with communist terrorists, one of which (a joint operation conducted with RTA and PP elements on 16 March 1967) resulted in the death of 11 insurgents and the CT unit leader.²

(U) (C) VSO not on active duty, but who remain armed, indirectly contribute to village protection. For example, in August 1967, an inactive VSO killed two insurgents and captured one weapon.

Intelligence Collection

(U) (C) Some 87 intelligence reports had been filed by the VSO in the 6-month period from their activation to May 1967. One such report was the basis for the joint operation of 16 March 1967 discussed above.³ One source reports that the VSO are responsible for 95 percent of the intelligence reports generated in Amphoe Na Kae, Fla Pak, Mukdahan, Kamcha-I, and That Phanom.⁴

(U) Contact between US officials and the VSO program occurs primarily through USOM's Division of Public Safety. There is a USOM-RTG project agreement for US commodity support, especially ammunition, weapons, medical supplies, and communications equipment.

INTERRELATIONSHIPS

(U) On the national level, the VSO, as an element of DOLA, is in contact on a regular basis with the INPD (especially the PP) and with CSOC. In addition, coordination is effected at the working level within DOLA between VSO project officers and VDC officials. Most DOLA officials who had been concerned with the VSO program turned their attention in early 1968 to the development of the new VSF program.

Conduct of Civic Action Projects

(U) VSO teams had conducted a total of 121 civic-action projects by May 1967. The bulk of these were small-scale village improvement projects such as repairs to village wats, construction or repair of simple school structures, road and trail improvements, and others of a similar nature.

(U) At the changwat level the governor and his staff are directly concerned with the operation of the VSO program. The paled changwat for security of the changwats involved in the program deal with VSO matters on a daily basis. Coordination occurs within the changwat CPM structure and directly with other agencies such as PP, CD, and AAD. A similar pattern holds true for the VSO amphoes, with the nai amphoe and his staff being the officials principally concerned with VSO matters.

(U) The VSO evaluation found that most VSO interviewed were satisfied with the support given by the RTA, especially in King Amphoe Fla Pak and Amphoe Na Kae, Changwat Nakhon Phanom, two areas of large RTA presence. There was less satisfaction with support from the police and amphoe officials, although a majority of those interviewed felt that they were satisfied with their relations with these officials. The success or failure of the relationships (as viewed by the VSO) with the RTA, police, or amphoe officials depended to a great extent on the activities and aggressiveness of these supporting organizations in the particular area. Another factor noted was that the tambon police stations were either so new, or so far away, that there was little contact between the VSO and the PP and, thus, little support in such cases.

(U) The relations between the VSO and the villagers were also considered in the VSO evaluation. It was reported that these relations are, on the whole, very good and that the VSO has helped in development projects. About 65 percent of the VSO interviewed said that they were concerned with villager aspirations and a similar percentage of villagers affirmed the VSO's concern. The villagers also felt that VSO discipline was good. The villagers interviewed also indicated that they felt more secure as a result of VSO presence, although they recognized that the VSO cannot on their own provide sufficient protection.⁵

PEOPLE'S ASSISTANCE TEAMS

SUMMARY

- (U) (C) The People's Assistance Teams (PATs) program was initiated in 1966 as a pilot project to assess the applicability to Thailand of village-based security and development concepts conceived in Vietnam. Development of the program was personally approved by the Minister of Interior and responsibility assigned to DOLA and the civil section of CSOC. A special new training center for PATs was established on 22 September 1966 at Camp Suan Son near Hua Hin in Changwat Prachuap Khiri Khan. It was decided to concentrate the initial efforts of the PAT program and the related Census Aspiration (CA) program in Changwat Sakon Nakhon.
- (U) (C) By the end of 1967, the pilot phase of the program was completed and no additional PATs are to be trained. There are now 24 PATs, with from 7 to 16 members each, in six amphoes of Sakon Nakhon, 10 teams in Amphoe Pla Pak, Nakhon Phanom, and 2 teams in Amphoe Kui Buri, Prachuap Khiri Khan. A total of 442 villagers have received PAT training, including 56 women who serve as team medics. The 9-week training provided team members with capabilities in paramilitary actions, conduct of village improvement projects, psychological operations, and information collection. One of the special features of the PAT training is the political and motivational training designed to instill a sense of commitment and "elan" in the team members.
- (U) (C) Team members are recruited on an amphoe-wide basis. Upon completion of training the teams are assigned to specific villages in the amphoe of recruitment. They may be moved to other villages in the amphoe at the discretion of the changwat governor and the nai amphoe. The PATs provide armed village protection, work to improve the village, and collect information from the villagers. They carry small arms (carbines, rifles, and submachine guns), wear village-style clothing, and are provided with tools and equipment to conduct village improvement projects. Team medics, two per team, provide medical assistance to the villagers. PAT members each receive \$680 per month in salary and allowance. Each team has an HT-1 radio to communicate with other PATs and with the nai amphoe's office.
- (U) (C) The PAT program forms much of the conceptual base for the new Village Security Force (VSF) program being developed by the RTC. Current planning envisions that VSF members will receive PAT-style training (including political and motivational instruction) and utilize PAT operational concepts, but will be restricted to their own village of residence. A US Mission-sponsored evaluation of the PAT program is underway to assess the implications of the PAT experience for the new VSF program, and, while not yet completed, some of its tentative findings are incorporated in this section of the volume on paramilitary organizations.*

*The information in this section was collected by the RAC researcher who is, at the same time, the principal investigator for the "Evaluation of the PAT Program" now in progress. To collect this information, several visits have been made to Sakon Nakhon and Nakhon Phanom to observe the teams in action and discuss the program with RTC officials responsible for it and with their US advisors. To date 22 of the 24 PATs have been actually observed in the field in Sakon Nakhon. Several teams have been visited more than once. Discussions about the PAT program have been held with the changwat governor, police changwat-security, police changwat-development, police changwat-administration, CMW staff, several nai amphoes and police amphoes for security and PAT, with PAT members, team leaders, and, of course, with villagers in PAT operational areas. Several visits have been made to the PAT training center to observe training in progress and discuss the program with the center's staff. The DOLA/CSOC office in Bangkok and its Director, Mr. Asok Ratanapibul, were contacted for their perspective on PAT activities.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

MISSIONS

(U) The mission of the PATs is to provide security to the village in which the team is located. A particular concept has been developed to support this provision of security by the PAT, since much more is involved than simply providing armed defense.

PAT Doctrine and Concept

- (U) (C) The concept of a village-level defense and development team, composed of local villagers receiving special motivational training and aggressively armed and employed--generally known as a PAT--was initially developed in Vietnam, although several earlier variants were used in the Philippine and Malayan counterinsurgency experiences and elsewhere. This program represents an attempt to apply the concept to Thailand, modified to the Thai environment.
- (U) (C) It is generally agreed that the major problem in dealing with the insurgency in Thailand involves effectively separating the insurgents from the rural population--the villagers-- thus removing the insurgents from their required base of support for manpower, food, and information. According to the PAT concept, only village-level permanent security elements can successfully fulfill this mission. These elements must be locally recruited and specially trained in the conduct of rural development and village improvement projects, self defense and aggressive paramilitary techniques, psychological operations and attitude change techniques, and information collection. Further, these specially selected villagers must be instilled with a deep sense of commitment to providing permanent security and development for their assigned village.
- (U) (C) PATs conduct basically two kinds of activities: armed protection and attitude change. Through these two roles, both of which according to the concept are essential to the success of the program, the team is able to collect intelligence about the insurgents from the villagers. This intelligence allows the team to anticipate insurgent movements, report to higher authorities, set ambushes, and, in sum, to obviate the usual condition where the insurgent has all the initiative.
- (U) (C) The basic proposition underlying the PAT concept, therefore, is that an improved village defense posture plus favorable attitudes on the part of villagers resulting from a government presence, which provides both protection and village improvement, lead together to better intelligence. This in turn allows for the creation, over time, of a permanent viable security environment in that village. The PAT concept requires that both defense and attitude change be carried out by the team; with either missing, the vital link of intelligence will not be forthcoming from the villagers. The concept is predicated on the assumption that villagers from the local area, given special training, can best fulfill this mission; police and military units, as outsiders, will not be able to do so. The concept relies on external support to the village-level teams from police or military patrol and reaction forces, but rests on the basic premise that only village-oriented local elements can provide permanent security to the village.

Adoption of the Concept in Thailand

- (U) (C) Assigned Missions. The missions assigned to the PATs in Thailand have differed significantly from the basic concept in two categories: aggressiveness of the teams and mobility throughout the operational area. These two features of the PAT concept have been deemphasized by the RTC in place of an emphasis on the direct "development and attitude change" aspects of the program. RTC officials state that the primary mission of the PATs is to "bring the people to the side of the government." They stress village improvement projects and intelligence collection rather than aggressive defense. The teams at night protect primarily themselves rather than the entire village in which they are stationed. Adoption of the PAT concept in Thailand called for the teams to provide armed presence in the village rather than complete armed protection; and, similarly, the teams were movable from village to village within the amphoe upon order of the nai amphoe, but they are not mobile in the true sense of the word.
- (U) (C) In all other respects, the PATs in Thailand are functioning along the lines called for in the standard concept. They do provide an armed presence in their villages and some defensive capability. Although they seldom conduct night patrols or patrol outside the village confines, the types of insurgent incidents evident in the PAT villages before the arrival of the teams appear to have been eliminated. In PAT villages there have been no armed propaganda meetings, no assassinations, nor kidnappings, despite the fact that all these had occurred in many of these villages prior to the arrival of the team. Three of the teams have been attacked at night by sizable groups of armed insurgents with no PAT casualties.
- (U) (C) In addition to providing armed protection as described, the teams conduct and stimulate a wide variety of village improvement projects and participate in other activities designed to alter villager attitudes toward the team and toward the RTC. These are described in the section below on "Activities." Following through on the PAT concept, the teams have been collecting and reporting a good deal of information, particularly about the presence and activities of insurgents in the local area.

- (U) (C) The lack of a clearly defined legal status for the PATs is clearly one of the reasons for the government's decision to restrict team aggressiveness. As opposed to the VSO or VDC, the PATs were given no legal status. They have no authority to arrest, capture, detain, or interrogate anyone, and many problems could arise if the governor tried to make them a vehicle for the exercise of these powers. This unclear status for the teams probably accounts, in large measure, for the lack of aggressiveness incorporated in the concept of operations.
- (U) (C) One additional point about the PAT-assigned mission is important. The concept seems to have evolved in which the PAT acts as the "leading element" in a village to alter villager attitudes and win the people over to the side of the government. Once the villagers have become more friendly to the government, VDC or other protection units can be introduced into the village with PAT being assigned to another difficult village. This process is apparent in several cases in Sakon Nakhon; these are described in the section below on "Locations," along with a discussion of the reasons for team movement.

ORGANIZATION

(U) The PAT program is entirely oriented toward the villages in which the teams are assigned. The program is supported and controlled at levels above the village by various organizations, especially the RTC civil administrative structure..

National Level

- (U) (C) There is very little in the way of organizational structure at the national level specifically created to support the PAT program. A small office within DOLA supports the program and represents it throughout the national bureaucracy.* Operational control of the PAT program, to the extent that it emanates from Bangkok, comes primarily from two sections of CSOC involved in program decisions and project implementation: the Operations and Coordination Center and the Civil Section.

Changwat and Amphoe Levels

- (U) (C) The PAT program operates under the control of the changwat governor. No special changwat-level organizations were created in Sakon Nakhon or Nakhon Phanom to support the PAT program; rather, existing institutions and individuals were tasked to handle PAT matters in addition to their other duties. Figure 12 shows the existing arrangement of the PAT program in Sakon Nakhon. The Governor has been assisted in operating the PAT program by his Deputy for Security (Palad Changwat-Security) and by the Lord Mayor of Sakon Nakhon city who acts as a special advisor to the Governor. The changwat CFM has at times been concerned with team employment, intelligence reporting, and so on. The changwat PP headquarters has also been involved at one time or another in the operation of the program; and the CA Province Study Center is closely involved in the PAT program, particularly as it collates, analyzes, and reports information collected by team members.

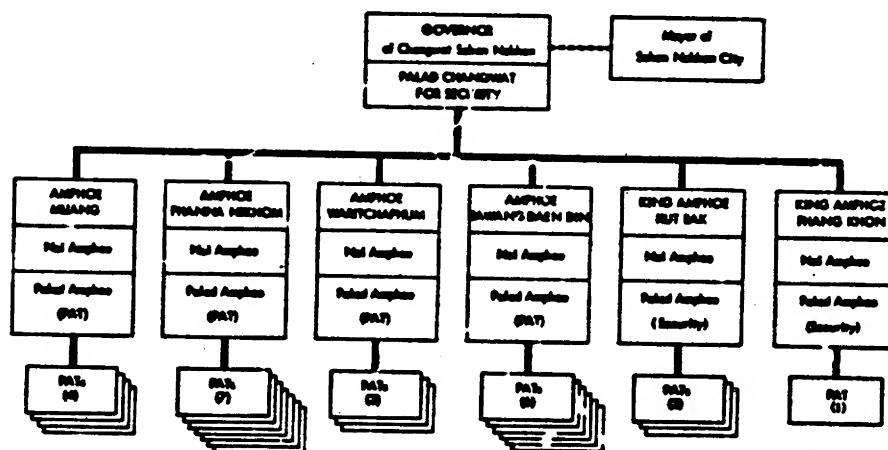

Fig. 12: ORGANIZATION OF THE PAT PROGRAM IN CHANGWAT SAKON NAKHON

*This office also supports the related Census Aspiration program; the office is in essence under the operational control of CSOC.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(U) (S) At the amphoe level all aspects of operation of the PAT program are the responsibility of the nai amphoe, assisted by a paid amphoe for PAT in four cases, and by the paid amphoe for security in the other two. These latter officials are also responsible for VDC activities, whereas the other four are able to spend full time in support of the PAT program. These 12 officials make the major decisions about team employment, locations, and activities. They are responsible for selecting, recruiting, and verifying the backgrounds of the villagers eventually chosen for service in the PAT program. They provide day-to-day administrative and logistical support to the teams, including medicine, equipment, and radio repair (at least as middlemen between the teams and the changwat), and fulfill the myriad of other required support functions.

(U) In Nakhon Phanom, the one amphoe with PATs (Pla Pak) has a paid amphoe-security who provides support to the PATs as well as to VDC and VSO in the amphoe.

Team Organization

(U) (S) The PATs in Sakon Nakhon range in size from 9 to 16 people, usually including two female PAT medics. Table 13 illustrates the standard organization of a 10-man team. Field observation, however, indicates that each team's organization is slightly different, depending on the amphoe concerned, wishes of the team leader, aptitudes of the team members, and so on. In particular, except for the medics, the specialization of member skills indicated in Table 13 undoubtedly represents the ideal case only. The equipment items listed have been provided to each team, but the teams observed in the field did not demonstrate any appreciable degree of specialization for village improvement activities. If a team has two members with previous experience as carpenters, for example, they would both use this skill in the team's daily activities. When a unit includes more than 10 members, the additional ones are assigned duties in general support of the team's overall planned activity. Female medics are assigned to the teams in pairs; no team has only one woman.

Team Member, Photographer	M1 Carbine	Camera, Film
Team Member, Construction Man	M1 Carbine and Grenades	Shovel, Spade, Pick
Team Member, Radioman	M1 Carbine and Grenades	HT-1 Radio

(U) (S) The PATs in Nakhon Phanom are organized in groups of 10 men and 2 women each. However, the initial employment concept for these teams following their return from training in November 1967 called for them to operate in double teams of 24 people each, to provide greater security for the individual elements. Eventually they are planned for assignment in the original 12-man elements.

FUNDING

(U) (S) The PAT program, as a pilot project, was funded in its initial stages entirely by the US Government. This included paying team member salaries as well as providing equipment, training, and logistics support. The money for salaries was not paid directly to the team members by US personnel, but was provided to the nai amphoes (or, as was often the case, the paid amphoe) who in turn paid the teams. Payment of salaries is made once a month at the team location. A 10-man team receives a monthly cash input of \$6,850 in salary.

- (U) (C) As of 1 March 1968 the RTC assumed full responsibility for payment of PAT salaries, allowances, and provision of replacement equipment and logistics support. The costs are being included in the budget of the new VSF program for the RTC fiscal year ending 30 September 1968. By June 1968 basic decisions are scheduled to be made by DOLA as to the final utilization of existing PATs, their organizational status, and provision for continued funding.
- (U) (C) The program provides for a revolving fund of \$2,000 to be available to each nai amphoe for support of his teams. This fund is used primarily for the purchase of locally available materials required by the teams, such as nails, concrete, batteries, and so on. This fund was developed to help decentralize logistics support for the program by making available at the amphoe level the capability to purchase needed items.

LOCATIONS AND STRENGTHS

Sakon Nakhon PATs

- (U) (C) Team Locations. There are 24 PATs in Sakon Nakhon, located in Amphoes Muang, Phanna Nakhon, Waritchaphum, Sewang Daen Din, King Kut Bak and King P.ang Khon. Figure 13 shows the locations of these teams as of March 1968, and Table 14 lists the name and coordinates of villages in which the teams were assigned as of that time. Listed in Table 15 are those villages previously covered by a since-reassigned PAT. The 24 teams had a total of 271 members actually assigned in the villages.

*Two teams together for mutual protection.

(U) Selection of Villages for Assignment. The PATs have generally been assigned to perform village security functions in the "hottest" villages in their amphoe. For example, the Mai Amphoe of Waritchaphum stated that his PATs "...were placed in the most dangerous villages in Waritchaphum." These were usually villages from which support to the insurgents for recruits, food, and other necessary items had been heavy. Many of the villages in which the PATs have been assigned had witnessed armed propaganda meetings, assassinations, kidnappings, and other overt insurgent incidents prior to arrival of the teams.

(U) Ban Nong Phak Thiam, Phanua Nakhon, is a village which has, according to many reports, been involved in the communist insurgent movement in the Northeast for several years. Along with Ban Phan Tan in Amphoe Na Kae of Nakhon Phanom, it was an early CT-support village. Seventeen young men from the 31 families in this village were reported as serving with the insurgents in the hills in November 1967. Other insurgents, formerly from this village including CT leaders

We Khotama and Boonai Malithong, have been killed. The nearby village of Ban Khok Manao has been in the past another strong supporter of the insurgency. Ban Phak Kham Phu (also in the southern Phanna Nihon area) was the scene of a serious CI incident in July 1967 when an estimated 200 insurgents entered the village and conducted a forced propaganda meeting. They also took 10 villagers, tied their hands behind their backs, and beat them in front of the villagers. Two of these 10 men--the village CI cadre and his messenger--were then killed; the other eight were released. All these villages have had PAT teams assigned. In Woritchaphum, the PAT located at least historically. The same may be said of the PAT in Ban Klong of King Amphoe Kut Bo. In Amphue Sawang Daen Din, the PATs in Ban Kham To Na and Ban Kham Mak are located in villages right on the edge of the Dong Pra Chao forest, a major insurgent base area; these villages have reportedly provided the insurgents with much support. All villages selected for PAT assignment have, to a greater or lesser degree, been deeply involved in providing support to the insurgents.

(U) Selection of villages for PAT assignment is made by the nai amphoe assisted by his palad amphoe-security. The changvat governor is also very influential in selecting PAT villages. The teams may be assigned anywhere in the amphoe and moved to a new village at the discretion of the nai amphoe and governor. Teams have, to date, been assigned to "hot" villages, as noted above. Some teams have been assigned to villages which also had Army, VDC, or tambon police presence; most, however, were on their own. Some teams have been assigned to villages located on good roads, others are in very remote location, reached without arduous travel, only by helicopter. Some teams were assigned to very poor villages, others to villages which had already undergone much improvement (in one case, at Ban Khok Si of Sawang Daen Din, the team was located in a "model village" on a main ARD road--the team was there only for one month, then was moved to nearby Ban Khos Don, an extremely poor village at the far end of the road).

(U) Team Movement The PATs in Sakon Nakhon have been movable, but not mobile in the true sense of the word. Nearly all of the teams have been moved at least once since their original formation. Those villages which previously had a PAT assigned are listed in Table 15. The primary reason for moving a PAT to a new village seems to have been the accomplishment of its assigned mission in the original village. In this sense, the PATs have been used as the "leading edge" of RTC response to the village security problem, remaining in a village until villager attitudes there are improved and the overall security situation bettered, then moving to another "hot" village. The PATs have usually been replaced in the original village by VJC, PF, or RTA security forces. For example, the teams in Ban Nong Phu and Ban Na Nai, Phanna Nihon, were moved to new villages where RTC officials felt that they could be better employed, leaving the security of the Nong Phu/Na Nai area to the tambon police station located at the former vil-

PEOPLE'S ASSISTANCE TEAMS

51

PERSONNEL

Recruitment

(U) The PAT program recruited team members on an amphoe-wide basis. Members were recruited from anywhere in the amphoe, and emphasis was placed on recruiting rural villagers who are best suited to fulfilling the PAT mission. After completing the special training they returned for assignment with their team anywhere in the amphoe of recruitment. Teams can be, and most have been, moved from one village to another within the amphoe. No team has been used operationally outside its home amphoe. Selection of the right personnel for the program--those who can be effectively motivated--is a crucial cornerstone of the entire PAT concept.

(U) The program set forth the following selection criteria: those villagers selected for the PAT program must be between 21 and 45 years of age and in excellent physical condition. They must be literate, with a minimum formal education of Prathom 4. They must have a record of good conduct certified by their local phuyaiban and kamman.

(U) (C) Responsibility for selection of team members rests with the nai amphoe, assisted by the palad-security and other members of the amphoe staff. The nai amphoe is informed by the governor of the number of PAT recruits allocated to his amphoe and the date scheduled to begin training. He must then select and recruit this number of people. In most cases sufficient prior notice was given to the nai amphoes so that established selection procedures could be used. However, in the case of King Amphoe Kut Bak, administrative problems forced the entire recruitment process to be telescoped into 7 days; personnel problems are evident in the three Kut Bak teams which were recruited in this manner. In actual practice, the nai amphoe passes down the requirement for a certain number of recruits to the kamman and phuyaibans, who then perform the actual recruitment, submitting names subject to the approval of the nai amphoe. In most cases those selected by the village officials are then called to the amphoe seat for a personal interview with the nai amphoe or the palad amphoe-security.

Backgrounds of PAT Members

(U) Initial analysis of data collected for the PAT evaluation indicated that the average age of PAT trainees was 29.6; the oldest member was 49 and the youngest 17. The average educational level calculated at Mathayom 2.4, with approximately 50 percent of the members completing Prathom 4, 25 percent completing Mathayom 6, and the remaining 25 percent in between, except for one trainee who had completed Mathayom 7.*

(U) (C) Field observations in Sakon Nakhon indicated that a large proportion of the men in the PATs had prior RTA experience, almost all in the infantry units stationed in the Northeast. A sizeable number of the team members seem to have prior skills in carpentry, masonry, and similar work directly applicable to PAT participation in village improvement projects (this was a significant factor in the apparent competence of PAT in village projects).

(U) (C) Many PAT members had relatives in other government positions; some had relatives who had been killed or kidnapped by the insurgents. When questioned about the actual individual recruitment practices used, most indicated that personal relationships with relatives or government officials were important to their hearing about the PAT program and being induced to volunteer.

(U) (C) Less than half of the PAT teams in Sakon Nakhon have members who actually came from the village to which they were assigned. All teams seem to have representatives from the general area in which the team is operating, and some teams had two, three, or even four members from the PAT village itself. In one case, the team leader was the phuyaiban of the village in which the team is assigned; in another case, the team leader was the local kamman. One team in Amphoe Muang had four members from the PAT village, including the team leader who is a former phuyaiban of the village.

Movement of Individuals

(U) (C) One of the apparent advantages of the PAT amphoe-level recruitment and assignment base is the flexibility this gives the program for team movement (discussed under "Locations") and for movement of individuals from one team to another when this would benefit the overall program. This flexibility in personnel assignment allows individuals to be assigned where best suited, leaders to be moved and changed, and for changes to be made after the teams gain experience and individual strengths and weaknesses can be determined.

(U) (C) An interesting example of such flexibility is provided by two of the teams in Amphoe Waritchaphum. The leader of the Ban Muay Lek Fai team was a former resident of that village and had many relatives in the local area. Although in most respects he was performing well as team

* See the Glossary for an explanation of Thai educational levels.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

leader, many team members were dissatisfied with his lack of aggressiveness and accused him of nepotism. As a result, the nat amphoe decided to trade this leader for the team leader from the PAT then assigned to Ban Lat Phu Wong. This change worked very well, with both teams operating much more effectively following the switch in leaders.

Leadership Selection

(U) (C) PAT leaders are selected while the group is undergoing training. About halfway through the course, the group from the entire amphoe is asked to vote on whom they would like to see as team leaders and deputy leaders. These choices are then approved by the instructor staff at Camp Suan Son to ensure that the leaders chosen have what the instructors consider to be the proper qualifications. Those selected then act as team leaders for the remainder of the course, under the observation of the instructors, and the final choice is confirmed just prior to the completion of the course. The leaders then undergo an additional 2-week leadership training session after the rest of the team returns to the Northeast.

Pay and Allowances

(U) PAT members receive a basic salary of \$500 per month, paid on a monthly basis. In addition, they receive a daily food allowance of \$6 and the team leader receives an extra allowance of \$50 per month. The teams in Nakhon Phanom, paid under the VDC structure, receive \$500-\$550 per month per man.

(U) All PAT members receive 3 days leave per month to visit relatives and family. They are provided by the government with tear clothing and boots.

TRAINING

(U) (C) All PAT training was conducted at Camp Suan Son near Hua Hin. The course lasted approximately 9 weeks, with team leaders remaining after the regular course for an additional 2-week leadership training session. The training provided PAT village recruits with basic skills in the three major areas called for by the PAT mission: paramilitary action for village protection; conduct of village improvement projects and attitude change programs; and collection of information and intelligence from the villagers. One of the unusual features of PAT training, a basic prerequisite to the PAT doctrine and concept, was the inclusion of political indoctrination and motivational training as an integral element of the PAT training course. This instruction was designed to give the PAT members a reason to fight and an understanding of the importance of developing an effective relationship between the armed element in the village and the villagers who are being protected by the team. The PAT medics received additional instruction in basic medical skills, given at the Public Health Hospital in Khon Kaen.

(U) (C) Four groups of PAT teams were trained during the course of the program. The first class trained 80 students and the second class 120 students, all from Sakon Nakhon. These teams completed their training and returned to Sakon Nakhon for operational deployment in their villages in December 1966 and March 1967, respectively. PAT Class III included 92 trainees from Sakon Nakhon, 20 from Prachuap Khiri Khan, and 12 from Ubon; this group completed training in June 1967. The fourth (and last) class included 100 men and 20 women from King Amphoe Pla Pak of Chantaburi Nakhon Phanom; these teams completed their training in November 1967. With the development of the VSF program, training of PATs (as such) in Thailand has been completed. PAT training forms the basic model for VSF training.

PAT Curriculum

(U) (C) PAT training was divided into five major subject areas, as shown in Table 17. The 337 total hours were divided into 225 hours of classroom instruction and 112 hours of fieldwork. These figures do not include night firing, night patrols, and practical exercises conducted outside usual training hours. The last 10 days of the course were devoted to a comprehensive field exercise, also not included in the 337 hours.

(U) (C) Political and Motivational Training. This training is unique among paramilitary training programs in Thailand and is an essential element of the PAT doctrine and concept. The curriculum used to instill motivation in PAT trainees was primarily a combination of history and politics. It was designed to teach PAT members the historical genesis of Thailand and the Thai

* The total PAT salary of \$600 per month is about \$100 per month more than the average VDC pay. This has reportedly led to some dissatisfaction on the part of VDC members fighting near PATs. As of March 1968, pay and allowances for the Sakon Nakhon PATs became the responsibility of UNLA under agreements creating the new VSF program.

† After their return from training, these 10 persons were attached into the VSF program, discussed elsewhere in this report. They are no longer active members of a PAT.

people and to instill greater patriotism and nationalism in the students--its objective was expressed as making the students "feel proud to be Thai." The instruction demonstrated that the country is now facing a new enemy threat--Communism--and that the consequences of a defeat would be to lose their identity as Thais. The response of the government to this subversive threat was discussed, with particular emphasis placed on the role of the PAT as a key element in this response. The importance of the monarchy and Buddhist religion were stressed, and the instruction included a series of strictures and rules regarding behavior by PAT members in the villages.

(U) This section of the course was developed by the Director of PAT Instruction, based on his knowledge of Thailand, understanding of PAT doctrine, and his acquaintance with PAT training given in Vietnam. Most of the motivational training for PATs at Suan Son was given in one-hour lectures presented personally by this officer, who is scheduled to be the Director of Instruction for VSF training.

(U) Self-Help Village Improvement Projects. In this section of PAT training, the team members were taught certain basic techniques of conducting village improvement projects. They learned how to work with the villagers and improve the village using carpentry, masonry, animal husbandry, agricultural techniques, giving hair cuts, first aid, and prevention of plant and animal diseases. The use of these various skills by the teams in the villages is described in the section on "Activities."

(U) Propaganda and Psychological Operations. This section of the course was designed to teach PAT members how to speak effectively with the villagers, both privately and in public sessions. They were also taught about the nature of communist propaganda and rumor, and how to counter them either orally or through use of simple handmade leaflets. (One man on each team is responsible for producing field leaflets; he is given a small hand-stamp set, an ink pad, and several kinds of paper.) The team was also taught the importance of explaining clearly to the villagers, upon first arrival, the role of the PAT in that village, the ways in which the team will help the villagers, and the need for support from the villagers. Team conduct of various kinds of psychological activities is described in the section on "Activities".

(U) Weapons Training. The weapons instruction taught the students how to use all five PAT weapons: M1 rifle, M1 carbine, shotgun, M3 sub-machine gun, and M1911A1 (.45 cal) pistol, plus hand grenades. Emphasis was placed on instinctive firing and immediate action.

(U) Tactics Instruction. The para-military training given to the PATs was divided by the PAT instructors into 10 categories, as follows:

- Small-unit tactics
- Ambush and counter-ambush
- Raids and defensive measures
- Security and self-protection techniques
- Patrols and reconnaissance
- Individual tactics
- Guerrilla warfare
- Map reading and use of the compass

PARAMILITARY ORGANIZATIONS AND PROGRAMS

Communications (voice radio, HT-1)

Intelligence collection and reporting

The teams were basically not trained as offensive elements. Their training did show them how to exploit intelligence through an ambush or a small raid on a CT camp, but the training was basically defensive in nature. The teams were, in essence, trained to provide armed protection in remote rural villages, while engaging in self-help and development activities to improve the intelligence base which is the heart of permanent viable village security.

- (U) Although all members of the team were trained to consciously collect intelligence and information from the villagers, one member of each PAT is trained to fulfill a specific intelligence reporting function. This man is given an abbreviated version of the CA course--2 weeks instead of the usual 4. He submits daily reports through the CA system and is known as a CA/PAT or "mobile" CA.

Other PAT Training

(U) Medical Training. Each team includes two medics who conduct basic medical assistance programs in their assigned villages (described below under "Activities"). Essentially they involve dispensing several kinds of basic medicines to treat common Northeast village ailments. The PAT medics, many of whom are female, underwent a 6-weeks' medical training course at the Public Health Hospital at Khon Kaen. Usually they attended this course prior to undergoing PAT training at Suan Son, so that they were ready to accompany their teams upon return to their villages. (The female PATs underwent the normal PAT training course, including the full range of weapons instruction and paramilitary training. All female PATs are medics, while 36 of the 56 PAT medics in the Northeast are females.)

(U) Leadership Training. Midway through the first year of the program, it was determined that PAT leaders should undergo some additional training, following completion of the basic course. Thus, teams returned to their home amphoes while the leaders remained at Suan Son for the leadership course which lasted 10 to 14 days.

- (U) Refresher Training. No refresher training has been given to the teams as a whole. However it was realized that many aspects of the paramilitary instruction were basically inadequate for the teams to operate aggressively in security-sensitive areas. This is particularly important given the changing nature of PAT employment described under "Mission" above. The team members themselves realize the skills which they are most lacking, as shown by interviews conducted in October and November 1967. The members desired more training in ambush, patrol, attack, raid, night movement, and counterambush. As a result, a retraining course in paramilitary activities was planned for 1968. PAT medics during November 1967 received refresher training, given in the Changwat seat by the PAT medical supervisor and PAT advisor. CA/PAT members attended a CA seminar in December 1967.

Training Center Organization

(U) The PAT training center was located within the compound of the Phetchaburi Military District headquarters, Camp Suan Son, Tambon Nong Kae, Amphoe Hua Hin, Changwat Prachuap Khiri Khan. The center, founded on 22 September 1966, was administratively attached to CSOC and divided into two sections: training and support. Personnel from DOLA, TNPD, and RTA were assigned on a TAY basis to CSOC to act as instructors.

- (U) As of November 1967 there were 14 full-time PAT instructors assigned to the center. They concentrated on the political and motivational instruction. Part-time, special instructors were obtained from the PARU (Camp Naresuan), Prachuap Khiri Khan Vocational School, Thai-Israel Rural Development Demonstration Center (located in Cha-Am, Phetchaburi), Hua Hin Animal Inspection Station, and Prachuap Khiri Khan Veterinary Section.

EQUIPMENT

Weapons

- (U) Providing team members with small arms of high firepower is a basic feature of the overall PAT concept, which calls for the teams to conduct aggressive defense of their assigned villages. The PATs in Thailand have generally received a weapons package which meets this requirement.

- (U) The standard weaponry for a 10-man PAT was originally established as follows:

Patrols were recruited in late 1967 as political and motivational instructors for the new VSF program.

UNCLASSIFIED

11/10/1971

55

Two M1 rifles
Four M1 carbines
Two M3 submachine guns
Three M911A1 pistols, total 145

It was planned for the team leader to carry both a carbine and a pistol and the two bodies to carry only a pistol. Shotguns are not issued as standard F&T equipment, but they have been provided to the nat. police for FA use when required (for example, for an ambush or special security duty where a shotgun would be useful). To date, these weapons have not been called for by an operational FA. Team members receive training in all five weapons.

- (U) 101 PAT teams on site seem to have a slightly different combination of the four basic weapons. But the four were the only ones in evidence with the PATs. Each team also had some hand grenades. The weapons package may be changed, replacing some of the M1 carbines and M1 rifles with M2 automatic carbines. This would give approximately half of each team automatic weapons. At the same time, the PAT medic would receive an M1 carbine for use on patrols, team movement and security duty, but while conducting their medical activities in the village they would continue to carry only a pistol, leaving their carbine in the team location.

Dress

- 10) In keeping with their status as a village-oriented security force, the PATs do not wear a military-type uniform. They are issued dark blue denim clothing without any distinctive insignia, similar to that regularly worn by Northeastern villagers. They are also issued rubber-soled canvas boots, plus "fitted" field equipment such as a blanket, mosquito bar, and field pick. The program does not require that members wear the complete standard issue, and many PAT members observed in Sakon Nakhon were wearing a mixture of PAT-issued and regular civilian clothing.

Communications

- (U) (X) The PATs use the hallicrafters HT-1 radio, a hand-carried VHF voice set. With an antenna placed in a tree or on a long bamboo pole, the effective range of this radio is between 5 to 7 km. In tactical use on the move, the radio has an effective range of about 1 km. Each PAT has one of these HT-1 radios and another is provided the amphoe office.
- (U) (X) The teams within an amphoe communicate with each other if they are within range. They also communicate with the pat amphoe's office, either directly where range permits or through a relay arrangement with a nearby Thai unit or bamboo police station. In early 1967 in Phanna Nakhon, for example, there were four PATs all operating in close proximity to one another. One of these four was located in the same village as the bamboo police station, and acted as the net control station for all four teams, receiving messages from them and passing the information to amphoe through the police radio.
- (U) (X) The PAT radios do not net with the FM-1 and FM-2 radios generally available to the VSR and Cambodian police or provided to Samians through the Village Radio System project and scheduled for the VSR. Contacts with these units, if desired, must be made by messenger.
- (U) (X) Due to their location, the PATs in southern Phanna Nakhon are in radio contact with the main teams in Bang Amphoe Kut Kak and with the pat amphoe office. If they cannot, however, contact the Phanna Nakhon amphoe office directly.

Post-Event Support

[illegible]

The first officers stated a preference for the M1 rifle even though it is heavier than the M14 rifle. They said that it is the only rifle in the range was greater. The M14 was classified as a "sniper" rifle and intelligent officers in the first place were a range five required. The men, including the women, expressed a desire for a rifle was due to the M1 rifle in addition to their rifle.

WILLIAM W.

56

PARAMILITARY ORGANIZATIONS AND PROGRAMS

- (U) (X) Medical support is somewhat of a special case. A Thai registered nurse works with the US advisors to the program and advises the PAT medicals on their medical assistance activities. She maintains records of stock levels for medicines, checks inventory statements, conducts medical refilling sessions, and fulfills a wide variety of related functions in support of the PAT medical program. Whenever possible, medicines are purchased locally.

ACTIVITIES

- (U) (X) PAT activities in the villages may usefully be divided into three major categories, as follows:

Protection/Defense Security

Development/Self-Help/Village Improvement/Attitude Change

Intelligence/Information Collection and Reporting

As noted earlier, the PATs are assigned to a particular village. They may be moved to another site, but until that happens they are primarily responsible for the village in which they are located. Some teams, on their own, have been covering more than one village; but this is the exception rather than the rule.

- (U) (X) Upon arrival in the village, the PAT's first job is to explain to the villagers their purpose in being there, explain the assistance they intend to provide, and ask for support from the villagers. This is usually done in a group meeting, followed by visits to individual families by the medical and one or two other team members. The village may be given a leaflet produced by the team which explains PAT assistance, and in all cases the villagers are encouraged to avail themselves of PAT medical assistance.

- (U) (X) One of the next tasks undertaken by the PAT is to establish team living accommodations. These are usually set up in the wai, although some of the teams have constructed separate buildings made of bamboo and wood. Limited defensive fortifications are established around and under the team shelter, and the team radio antenna is set on a bamboo pole. Brush may be cleared to improve fields of fire, and procedures for 24-hour guard shifts are arranged.

- (U) (X) Following these initial steps, the team is ready to begin activities in the three categories listed above. Most teams try to start a high-impact village improvement project soon after their arrival. This project, combined with intensive medical assistance during the early weeks in the village, establishes the basis for development of effective rapport between the team and the villagers.

Village Protection

- (U) (X) The PATs conduct several kinds of activities in support of this objective. They provide, first and foremost, an armed government presence in the village--10 or 12 men with weapons, and the skill and motivation to use them if necessary.
- (U) (X) During the day, the team is in the village working on improvement projects. In addition, daylight patrols may be conducted on the fringes of the village. The size of these patrols and their frequency depend primarily on the size of the team and the local threat environment. Night patrols are seldom conducted by the PATs, since this is considered outside of their basic mission as currently assigned. When information indicates the likely presence of armed insurgents in the immediate vicinity, however, night patrols may be conducted within the village and perhaps a short distance outside. With such intelligence, ambush positions may be set at likely points of insurgent entrance and egress from the village. The PATs in Ban Kiat Noi, Phra Sawang Man, and Ban Huay Lek Fai, Amphoe Saritchaphum, for example, have pre-located ambush positions at points where the main trails enter the village.

- (U) (X) Constraints placed on the teams have severely limited their aggressiveness and the extension of their protection role beyond the confines of the assigned village. For example, the teams seldom respond directly to intelligence reports which indicate the presence of insurgents several kilometers away. However, the PAT at Ban In Dong in Phanna Nishom responded when about 20 armed insurgents entered Ban Na Nai, several kilometers to the north. This PAT had previously been located in Ban Na Nai, and when the CI arrived 18 men from that village ran to the PAT in its new location and pleaded with them to respond. The team asked for permission to do so from the nai amphoe, and they responded on its own while Amphoe "studied the request." By the time the PAT arrived at Ban Na Nai, the insurgents had left, but the villagers were reportedly very pleased that the PAT had come to their aid.

- (U) (X) Another example of the kind of operational constraints placed on PAT operations outside

CONFIDENTIAL

(v):

(v)

(v)

(v)

[illegible]

PARAMILITARY ORGANIZATIONS AND PROGRAMS

If the committee is in agreement, a village meeting is scheduled for early in the morning on the day of the project. At this meeting the members of the development committee speak to the villagers, tell them of the value of the project, and encourage them to participate.

(U) Roads and Bridges. PATs spend a good deal of time working with the villagers in improving existing roads within the village. Every team has engaged in this activity to a greater or lesser extent. The roads are straightened and smoothed, and fill and drainage ditches are added. All the work is done by hand, using a long-handled hoe common to the Thai village. This road work is usually performed by a large group of village men, assisted by the PAT, often the PAT suggests to the villagers that such a project be undertaken. In several PAT villages, new roads have been constructed using these techniques. In at least two cases, one in Sawang Daen Din and the other in Phanna Nakhon, two teams have helped to improve roads linking their adjacent villages, with each doing half the road. In one case, the PAT repaired the access road leading to the village from the Sakon Nakhon-Udon highway (Route 22). This was the first time this road had been opened in over a year.

(U) All the teams have, at one time or another, repaired bridges in the local area in conjunction with villager-provided labor. They have added new lumber, improved abutments, and, in several cases, have constructed completely new bridges to replace ones beyond repair.

(U) Wells. The PATs have worked with the villagers to dig new wells and to improve existing ones. In several cases, they have added a concrete edging around the exterior of the well.

(U) House Repair and Construction. Next to work on the roads, the most common projects for the PATs involve repair of village houses and assistance in construction of new ones. In every village visited during the PAT evaluation (22 of the 24 PATs were observed), PAT house repairs were in evidence. The teams provide both skilled labor and tools for repair work and construction. In some villages, PAT members have assisted villagers in moving houses from one location in the village to another and in constructing new schoolhouses. In several villages the PAT has engaged in extensive cleaning under the village houses. All this work around individual villager houses is very important to the PAT image and to successful conduct of the mission because it brings the team members in direct constructive contact with the villagers in their own homes.

(U) Construction of Sanitary Privies. The PATs receive instruction during their training course in the construction of sanitary privies for the village. Several such facilities have been built, using a concrete base, wooden walls, and metal roof. In most cases these were the only privies which had been built in the village. They were usually put up in the wat; often the usage rate by villagers seemed very low--one was locked, in fact, and the monks had the key as well as the status symbol.

(U) Wat Repairs. The teams often reside in the wat and spend time and effort in repairing wat facilities and constructing new ones. Repairs have been made to the "sala wat" in many villages. In two cases, entire new buildings were under construction by the PAT and the villagers. In Ban Khar Kha, Arphoe Muang, a kitchen with a concrete floor has been constructed in the wat by the PATs. Many monks' quarters had been renovated, gates built on wat entrances, and fences constructed around the wat. During festivals and wat fairs, the PATs assist in decorating, cleaning up, building temporary facilities (such as a "chulam" stage), and generally stimulating villager participation in the celebration.

(U) Fences. New fences are much in evidence in PAT villages. These are made of wood and bamboo, cut by hand; the PATs furnish nails, tools, labor, and impetus. In one village of Phanna Nakhon (Ban In Chok), the resident team generated literally 5 miles of new fences. Each villager worked on the fence in front of his own house, assisted by other villagers and the PAT.

(U) Irrigation Facilities. Several PATs have worked with the villagers to build simple irrigation facilities nearby. These are usually earth dams, but may include irrigation ditches and connecting channels, as well. In one Phanna Nakhon village (Ban In Dong) the team built a fishpond for the village and stocked it with fish purchased in Sakon Nakhon city.

PAT experience regarding wells provides several examples of the vagaries of villager reaction to well-intentioned improvement projects. In Ban In Chok the team built a wooden pulley arrangement for the village well so that villagers would no longer have to draw water using a bucket attached to a long pole. However, the pulley is not often used by the villagers who prefer their traditional technique. In another PAT village, where the team initiated the digging of a new well, the villagers continue to use an older well even though the water is much dirtier, because "the water from the new well does not taste right."

In Ban In Chok Muang, of Morichaphum, the matter of PAT house construction was discussed with a local building contractor with a strong wife force. When asked if the PAT takes business away from him, he said that the PAT only performs house repairs for the poor who could not afford his services. He also confirmed that the PAT does not charge the villagers for the assistance rendered, and remarked that the quality of PAT work was surprisingly high.

The pressure for well built in this village must have been quite strong, for every house, even the most poor and run down, has a new fence, often of better appearance than the house itself.

CONFIDENTIAL

PEOPLE'S ASSISTANCE TEAMS

59

- (U) Work with Villagers in the Fields. The PAT members often help the villagers in the rice fields with plowing, transplanting, and harvesting. Whenever possible such assistance is provided to those most in need, such as widows. The amount of time spent by PATs in this kind of activity varies greatly with the season; when the villagers are spending a great deal of time in the fields, so are the PATs. Some PATs have established vegetable gardens near the team shelter for the team and the village to use.
- (U) Medical Activities. There are indications that PAT medical activities are the most important single facet of PAT development work, extremely important to the success of the team in people-to-people relations, attitude change, and generation of villager-provided intelligence. The medics personally visit every house in the village on a regular basis, talk with the residents, provide any desired medical service, and demonstrate clearly the government's interest in the villagers' welfare and betterment. Also, the medical role of the PATs seems to be the "cover" most often used by a villager in coming to the PAT shelter to report information about the CTs.
- (U) The PAT medics, usually two per team, are trained in basic techniques of preventive and curative medicine. They are aware of the major diseases in the area and know which medicine to prescribe for which ailment. They are provided with some 20 different types of medicine and trained in their use. Some of the PAT medics have delivered babies in their villages; they receive a little training in midwifery. Most of the PAT medics are women.
- (U) Haircuts. The PAT members receive training in giving haircuts to the villagers and are provided with a haircut kit. Most teams set up a "barbershop" near the PAT shelter which villagers visit to get a haircut. This has the advantage of encouraging the villager to come and visit the PAT, rather than avoid all contact with the team as is often the case with government armed units in remote villages.
- (U) Direct Attitude Change Activities. The PATs engage in two kinds of activities which may usefully be termed direct attitude change: production of written leaflets and spoken propaganda. The team has a small hand-stamp for producing leaflets. These are often used when the team first arrives in a village to explain the PAT program to the villagers. They are also used to prepare anticommunist leaflets or to inform villagers of particular government actions. Verbal or spoken propaganda by the PATs is supposed to take place every day when the team members come into contact with villagers. This activity goes on in individual meetings, while the team is working with the villagers, when the medics are visiting villager houses, etc. At times the PAT will call a village meeting to explain its presence, activities, and plans. This may be done in conjunction with a wat fair, village celebration, visit of a Mobile Information Team, or other gathering.
- (U) Intelligence and Information Collection
- (U) Collection of information from the villagers is one of the primary elements of the PAT concept; it is the basic rationale for the teams engaging in many kinds of village improvement work. The concept provides that once a relationship of rapport and trust has been developed between the team and the villagers, information will be provided to the team and the creation of a permanent security environment will become possible. The PATs collect information from the villagers by talking with them, working with them, and becoming a trusted part of the community. The team members are taught what to look for and what kinds of questions to ask but the villagers must have a reason to provide such information to the team.
- (U) The PATs have collected information on CT sightings in the area, CT presence including CT supporters in the village, CT equipment, CT activities, and CT plans. In most cases, as discussed in the section on PAT village protection activities, the PAT does not itself act on the basis of information collected, but reports it to amphoe for action or for instructions to act.
- Other PAT Activities
- (U) Conduct of Resources Control Programs Some of the PATs are engaged in carrying out RTC programs for controlling the movement of people through security-sensitive areas. For example, in southern Phanna Nakhon the PATs participate in an extensive program of movement control, along with the CT and police. This primarily involves issuing and checking passes for villagers who desire to visit other villages. The villager, prior to departing, checks with the PAT, states his reason for leaving, planned destination, and expected time of return. Some PATs issue special passes, others simply check to ensure that the villager's regular identification card is in proper order. Other teams in the area check strangers to be sure they have proper movement credentials. At times, the team will radio ahead to the next village to tell them of the expected arrival of the villager. These control programs seem in evidence in all six PAT amphoes of Sakon Nakhon.
- (U) Defector Influence. Some of the PATs, because of their activities in village attitude change, have become involved in inducing insurgents to surrender and give themselves up to the

PARAMILITARY ORGANIZATIONS AND PROGRAMS

government. The team in Ban Huay Lek Tai, Waritchaphum, is the most notable in this regard. Five CIs have been encouraged to defect because of the efforts of this team, and especially its leader, who is strongly oriented in this direction. Other teams have been requested by the families of insurgents to assist in inducing the relative to give himself up. All PAT members are taught during their training the necessity of treating surrendered insurgents properly, so that more CIs will be encouraged to give themselves up.

Role of Women

(U) There are 56 women in the PAT program in Sakon Nakhon and Nakhon Phanom, all trained and acting as team medics. These women, often in their late teens or early twenties, are extremely active in the conduct of their medical activities. They visit every house in the village, talking with the villagers as well as giving medical treatment. The presence of women in the PAT gives it a different character and image than it otherwise would have; it also permits contact with the female population of the village. The girls do the cooking for their teams as well as conducting medical activities. They seem to hold their own as regards PAT paramilitary responsibilities; they stand guard at night, carry a weapon when working, and know how to use it. There have been no problems reported by mixed teams, although all-male teams state that if they had female medics, there might be difficulties.

Multi-Village Coverage

(U) Some PATs, although assigned to one village and movable but not mobile, have covered more than one village. The team at Ban Phak Khan Phu, for example, visits the village of Ban Choeng Dui on a regular basis because this latter village--located in the hills--is "where the action is." The PAT at Ban Don Khao splits into three four-man teams, each with a female medic; one "subteam" stays at the PAT location while the other two visit nearby villages. In a similar manner, the team at Ban Phok Si moves out during the day to adjoining villages to conduct development work, hand out medicines, and collect information. Nearly every PAT team has collected intelligence not only from residents of its base village, but also from people in nearby villages. One PAT, formerly in Ban Na Nai, brought many sources with it when it transferred to nearby Ban In Dmg; the Ban Na Nai villagers now report to the Ban In Dmg PAT, rather than to the police station at Ban Nong Phu which is much closer to their village. Often these visits to other villages are made by the PAT without telling the nai amphoe because they are contrary to operating instructions. The team leaders, however, felt that it was both possible to cover more than one village and important to do so.

INTERRELATIONSHIPS

At the Village Level

(U) At the national level, the PAT program is the responsibility of CSOC and DOLA. In the Northeast the RTA Second Army Forward Headquarters has an interest in PAT protection activities, especially in villages near RTA operational locations. The PAT program is the responsibility of the changwat governor. In the conduct of this program, he coordinates with the CPM, changwat PP headquarters, changwat CD officer, and other ministry representatives. The PAT program relates closely to the CA Province Study Center, passing to it information collected by the teams.

(U) At amphoe level, the PAT program operates under the control of the nai amphoe, assisted by a palad amphoe f. PAT or for PAT/VDC, and by other amphoe-level ministry representatives. In support of PAT protection and improvement activities, the palad amphoe-PAT coordinates with the amphoe police, CD officer, CA amphoe supervisor, and others. Employment of the PATs, their movement to new villages and activities in their assigned villages are of interest to the CSOC 0410 Plan control headquarters elements for Areas 3, 4, and 5 in Amphoes Sawang Deen Din and Waritchaphum, and to Area 8 control headquarters in Pla Pak.

At Village Level

(U) PATs providing protection and improvement in the villages relate to many other RTC organizations operating in the same area. At times the PAT is assigned in the same village as other organizations, such as VDC, police, CA, or RTA; at other times the supporting organization moves through the PAT village, and the elements interrelate only for that period of time when they are both in the village. Figure 14 is a schematic of some of the interrelationships which are discussed in this section.

(U) Relationships with the VDC. In several cases in the past, a PAT has been located in the same village as a VDC unit. In most cases when the teams are both located in the same village they live together in the sala wat. They patrol together, conduct development projects together, stand night guard together, and share cooking responsibilities. When the leader of one

2722/2 In-1400-00

~~CONFIDENTIAL~~

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(D) In Lamhon Phanom, the Pla Pak PATs actually fall under the jurisdiction of the VNA structure.

- (U) Relationships with General Aspirations Program. In about half of the present PAT villages there is a resident CA cadre. The CA man derives security from the presence of the PAT, and the team retains information on insurgent activities and villager aspirations from the CA cadre. The relationships between the team and the CA man is generally very close, but attempts are made to maintain a separate identity for the CA cadre, who reports his information directly through the CA structure not via the PAT.
- (U) As indicated earlier, each team has one member who has received special training in information collection, survey work, and reporting; he is designated "CA/PAT," or "mobile CA." This man collects information from the villagers on insurgent activities in the local area and on villager aspirations and grievances. He also debriefs all team members each evening to find out what they have learned from the villagers during their daily activities. The CA/PAT reports this information on a daily basis directly to the CA amphoe officer, where it becomes part of the CA system, as do the reports submitted by the CA village cadres. This information gathered by the CA PAT is, of course, made available to the team leader for his use, as well as being reported to the CA system.
- (U) Relationships with VSO. The only amphoe of Sakon Nakhon to have VSO is Banon Niwat, where there are no PATs assigned. In Nakhon Phanom, however, the two elements both operate in King Amphoe Pla Pak; however, available information indicates that there are no VSO members serving on active duty in the five villages in which the PATs operate.
- (U) Relationships with RTA. In several villages of Sawang Daen Din, both PAT and RTA elements have been assigned to the same village at the same time. The presence of the RTA brought additional protection to the village and to the PAT in such cases. The RTA troops reportedly come to the PAT headquarters for medical assistance. At times the RTA has requested the PAT to provide a guide or scout for a particular operation, since the PATs are more familiar with the local area. In Ban Nong Daeng, the RTA and the PAT resided in the same compound, inside concertina barbed wire. The PAT in this village reportedly took its guidance from the Army unit, seldom strayed from the compound, and did very little in the way of people-to-people relations. This was a very unsuccessful experience for the PAT, undoubtedly the worst case in the program to date. RTA forces are located in some other PAT villages. Ban Phai, for example, served as headquarters for a large Second Army sweep operation. Following the 4-hour attack on the PAT at Ban Khan Ta Na (described above under "Activities") several squads of RTA troops were sent to the village. They arrived by helicopter at 0400 the morning after the attack and remained in Ban Khan Ta Na about one month.
- (U) At other times there are PAT-RTA relationships when the RTA unit passes through a PAT village on an operation, rather than actually being assigned there as described above. At Ban Nong Thun in Sawang Daen Din, for example, where PAT and RTA reside together, the Army moves in and out of the area on sweep operations against the insurgents. On three or four occasions the PAT from this village has provided a guide to the Army. On one such occasion, the PAT member was gone on the Army operation for more than 2 weeks. This PAT has provided information to the RTA troops on the local insurgent threat, including CT sightings by the villagers and probably CT locations. The team has, at times, carried food from the villagers to Army elements stationed in the forest outside of the village. When the Army is operating in this vicinity, they maintain radio contact with the VDC set at Ban Nong Thun, but not directly with the PAT (both units live together in the wai).
- (U) Relationships with Lamhon Police. The PATs relate closely with the local lamhon police stations where they exist. In Lamhon Na Nai of Phanna Nith there is a seven-man police station at Ban Nong Phu and six PAT teams operating within the lamhon. The PATs pass information which they collect to the police station. When the PATs first arrived in Phanna Nith they were all stationed in the vicinity of the Ban Nong Phu police station. The teams maintained radio contact using their AT-1's with the team at Ban Nong Phu acting as net control station to pass messages to amphoe using the police radio net. The PAT at Ban Nong Phu at first set up a shelter at the opposite end of town from the police, but were later ordered to move into the police compound to provide additional protection for the police station.
- (U) Other PATs in Sakon Nakhon interrelate with nearby lamhon police stations; for example, the PAT at Ban Champa, Waritchaphum, with the police station in Ban Khan Rit; and the PAT at Ban Khok Don in northern Sawang Daen Din with the lamhon police station in Ban Khok Si. In Amphoe

*Regulations call for prior approval from the nat amphoe for such use of a PAT member, however, on two occasions the Army requested the PAT guide without checking with the nat amphoe, feeling that in an urgent situation, the Army can request assistance without waiting for amphoe approval.

*For example, the team at Ban Nong Phai was relieved of its duties in early October that a CT leader, named Bunnit Malithong, had been in the village the previous evening to visit his family. This information was, in fact, given to the PAT by Bunnit Malithong. The PAT passed this information to the police. Earlier with other information, Bunnit sent in from other units. The police were able to set an ambush for this leader in late October. They killed him along with one other CT.

CONFIDENTIAL

Relationships with Village Radio Sets. Original equipment of the PATs in Sakon Nakhon consisted of 100 radios. The teams were assigned to villages where they had been provided with radios. However, the evidence indicates that during the first year of the PAT program, the radios were not used. The radios were not used because they were not in their original locations. Operational sites for use by the PATs. When the PATs reside with the PD, as has been the case in several villages, the team is able to use the PD's radio. In Ban Phom Nuan, King Amphoe Kut Bak, the village radio was taken by the insurgents during a forced village evacuation in mid-1967; this is now a PAT village. No villages in which the PATs have been assigned to themselves have had JRS radios available.

(C) Relationships with Phayathans and Village Improvement Committees. In most PAT villages the phayathan takes a personal interest in directing the activities of the team, especially PAT village improvement projects. These projects are aided by the village development committee if one has been designated and trained by the CD village leader training program. For example, in Ban Huay Nip of Amphoe Muang, the development committee, with the PAT team leader and senior monk participating as invited members, determines which village improvement projects ought to be undertaken and when. Several PAT team leaders are themselves phayathans or seniors.

(D) In Ban U. Phok, Phanna Nakhon, where the PAT and villagers constructed the many meters of new village fences referred to earlier, a village development committee has existed since January 1967. The committee members were told that they would soon receive leadership training, however, the committee had not received its training as of November 1967 and seldom saw the CD worker, who was reported to have sent instruction and suggestions for new projects via messenger. The committee, however, in spite of its lack of training was working closely with the PAT in the fence project and in other village improvement projects.

(U) Relationships with PP and PPP. In addition to the interrelationships noted between the PATs and the tambon police stations, there is some contact with the PP assigned at amphoe and changwat levels. In King Amphoe Kut Bak, for example, the amphoe police constitute the primary amphoe reserve force. In addition they occasionally visit the PAT villages of Ban Klang and Ban Phom Nuan on a motorized patrol. Both these villages are located on ARD roads in Kut Bak. In all five PAT amphoes the police radio system is important to PAT communications; messages may be sent from the teams to amphoe, and by amphoe to changwat, using the police net (or the civil administrative net). At one time during mid-1967 in King Amphoe Kut Bak, a BPP Mobile Reserve Platoon was assigned to patrol and provide security. This unit at times patrolled through PAT villages.

(U) Relationships with USIS Mobile Information Teams. On several occasions the MIT program has visited PAT villages to show movies and provide assistance and information to the village. Usually this is done in conjunction with a wat fair or other village celebration in which the PAT participates. At times, because of close working relations between US advisors to the PATs and the USIS officer in Sakon Nakhon, an MIT visit has been specifically scheduled for a particular village because it had a PAT in residence.

(U) Relationships with Second Class Health Centers. On one known occasion--at Ban Khok Si in Sawang Mun Din--a PAT has been assigned to a village which had an R.G. Second Class Health Center. The PAT, in fact, resided in a village meeting hall located directly next to the Health Center. This reportedly undercut the impact of PAT medical assistance programs, although the PAT female medics on this team visited houses in the village. The Health Center personnel received patients, but did not search them out. This PAT, while in Ban Khok Si also visited nearby villages on daily patrols which included a medic. No other relationships were noted between PATs and Second Class Health Centers.

(U) Relationship to VSF Program. Beginning in early 1968, US financial assistance to the PAT program ceased, and this responsibility was assumed by DOLA under the overall arrangements calling for creation of new VSF elements. The final utilization of the 36 teams (24 in Sakon Nakhon, 10 in Nakhon Phanom, and 2 in Prachuap Khiri Khan) had not yet been determined as of this writing (April 1968); 16 PATs are in Priority I VSF amphoes. Funds for the program are available through the KTG fiscal year ending 30 September 1968. The teams may be used to provide armed support to the new VSF elements created in their amphoes, or they could serve as mobile elements moving among several VSF villages, providing protection and improvement assistance, collecting information, and advising the VSF on their operations. With some retraining they could serve as "mobile instructor cadres" in VSF areas, providing periodic refresher training to the VSF members in their own villages. While VSF members from a tambon are in training and thus absent from their villages for about 2 months, these villages may be especially threatened by insurgent pressure. PATs could be brought in to provide enhanced security until the new VSF teams return from training.

~~CONFIDENTIAL~~

CENSUS ASPIRATION CADRES

SUMMARY

- (U) (C) The Census Aspiration (CA) program is a village-level information collection effort. One man (unarmed) operates within his own home village to collect and report data on the village and its residents, information on the aspirations and grievances of the villagers, information on the subversive/insurgent infrastructure within the village, and on insurgent activity in the vicinity. He reports this information to an amphoe supervisor on a daily basis. From amphoe the information is forwarded to a Province Study Center (PSC), where it is collated, analyzed, and filed. The PSC distributes information to the changwat governor and others in the form of a daily report, plus a weekly summary.
- (U) (C) This program was initiated in late 1966 as a pilot project designed to test the applicability to Thailand of an information collection program extensively used in Vietnam. As with the closely related PAT program, Changwat Sakon Nakhon was chosen as the test area. The first 40 village CA cadres became operational in December 1966; by March 1968 there were 104 village cadres operating in Sakon Nakhon, backed up by a support structure incorporating 77 people. In addition, the program was operating on a limited basis in Changwat Nakhon Phanom (34 village cadres) and Prachuap Khiri Khan (20 village cadres). All village CA cadres have been long-term residents of the village in which they are functioning. They are selected by the nai amphoe and receive 4 weeks of special training in information collection and reporting techniques. Following training, they return to their villages. Each village cadre receives a monthly salary of \$500.
- (U) (C) Since the program's inception, the cadres have collected a great deal of detailed information on insurgent movement and locations, identities, intentions, and incidents as well as having passed on villager aspirations for government assistance of a collective nature (e.g., for wells, roads, medical care and medicines, etc.) and individual desires (e.g., for seeds, fertilizer, cement, etc.). They have also been responsible for bringing to the attention of government authorities villager grievances concerning the conduct of local government officials and other villagers, and those expressing dissatisfaction with things beyond the villagers' control, such as thievery, natural disasters, and restrictive government regulations.
- (U) (C) To date, RTC response to CA-generated intelligence has not been significant; in those instances where response was forthcoming, there has been a considerable time lag between the initial report and reaction to it. Response to villager aspirations, upon which the CA cadre is dependent for villager cooperation, has been practically nonexistent due to problems of program coordination, lack of sufficient funds, and other difficulties. As of early 1968, however, there were indications of increased awareness on the part of RTC officials (particularly at the national level) of the importance of timely response to CA-reported villager aspirations and improvement in the situation should result.

*The CA program in Thailand is a modified version of the Vietnamese "Census Grievance" program, which operates some 6,000 village and hamlet cadres. Mr. Jean Coudoux, who initiated the program in Vietnam and shepherded its development, has been brought to Thailand to assist in adapting the program to the Thai situation.

~~CONFIDENTIAL~~

CONFIDENTIAL

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(U) (C) It is likely that the program will be expanded in 1968 with the addition of some 15 to 20 more cadres in Sakon Nakhon and 40 to 50 in Nakhon Phanom. It is also possible that coverage may be extended to other changwats in the Northeast, commensurate with the training and deployment of the VSF in these areas. Further modifications are likely to result from an evaluation of the CA program underway in early 1968 being conducted by the Research Analysis Corporation for ARPA.*

MISSION AND CONCEPT

(U) (C) The village cadre forms an unofficial link between the villagers and the government by reporting their aspirations and providing a channel for the outlet of their grievances. The CA concept is predicated on the belief that the cadre's role (and success) in these two areas will lead to the development of a strong personal rapport between the cadre and the villagers culminating in the provision to the cadre of information on insurgent identities and activities--the ultimate objective of the program.

(U) (C) If the CA conceptual basis is accurate, the effectiveness of information collection on subversive activities from the villagers is dependent on government response to villager aspirations and grievances; if the villagers can see that the government will take action in response to their aspirations, they will realize the value of continuing to work with the CA cadre in providing him with information on insurgent activities, and even protecting him from the insurgents if necessary. Conversely, if no response to their aspirations is forthcoming over an extended period of time, the villagers may become increasingly reluctant to pass sensitive information to the cadre.

ORGANIZATION

(U) There are three levels at which the CA program operates: village, amphoe, and changwat. Support to the CA effort from the national level comes from a small office within DOLA/MOI. This office is also responsible for providing national-level support to the PAT program, and actually functions under the operational control of CSOC's Civilian Section.

Village Cadre

(U) (C) The CA cadre who works in the village and reports information which he collects from the villagers is the key element supporting the entire program; all the rest of the CA structure exists to receive this information, collate, analyze and file it, and pass it to responsible RTG official who can use it. Each cadre is selected for training by the nai amphoe, based on recommendations from the local bannan and phuathai. After 4 weeks of special training, he returns to his village to begin full-time operations. In March 1968 there were 104 village CA cadres operating in Sakon Nakhon, 34 in Nakhon Phanom, and 20 in Prachuap Khiri Khan.

Amphoe Supervisors

(U) (C) Each amphoe in the CA program has a full-time supervisor assigned to support the village cadres in a variety of ways; some larger amphi have two supervisors. The daily village reports are forwarded by messenger in a sealed envelope from the village cadres to the amphoe CA office. There they are grouped and forwarded to the PSC. The amphoe supervisor does not open the village envelope; however, he may pass to the nai amphoe timely tactical information if verbally advised to do so by the village cadre or his messenger. This kind of information might be a sighting of a CT armed band or the report of CT intentions to attack a government unit; it would not include unverified sensitive information, which is held entirely within the CA system, crosschecked, then passed directly to the governor for his action. The daily report issued by the PSC is sent to the amphoe CA supervisor, who gives it to the nai amphoe.

(U) (C) The amphoe CA men provide logistic and administrative support to the village cadres in their areas. All village cadres visit the amphoe CA office at least once each month to receive their pay. During this visit, the amphoe supervisor reviews the village situation with the village cadre, including subversive developments and new village aspirations and grievances. The two men discuss the cadre's activities, and the session is used to reinforce some

*The information in this section was collected by the RAC researcher who is the principal investigator for this evaluation. To collect this information, several visits were made to Sakon Nakhon to observe the CA program in action. Discussions about the program were held with the chief of the post governor, deputy governor for security, CPM staff, nai amphoe, deputy nai amphoe for security, and, of course, with the chief of the CA Province Study Center, center staff, CA amphoe supervisors, and several village CA cadres. In addition, this section also draws on information contained in questionnaires completed by each village cadre. A visit was made to the CA training center, and several lengthy discussions were held with the originator of the CA concept (and principal instructor), Mr. Jean Coudouh. The DOLA/CSOC office in Bangkok and its Director, Mr. Anok Sarnanapattun, were contacted for their perspective on CA operations.

** In Prachuap Khiri Khan there are no amphoe supervisors; the 20 village cadres report directly to the PSC.

CONFIDENTIAL

CENSUS ASPIRATION CADRES

67

of the main points of CA training. New reporting requirements might be levied on the village cadre at this time. The identities and activities of insurgent supporters in the village are discussed, and the specific reasons for their being designated as LT supporters by the village cadre are reviewed.

Province Study Center (PSC)

(U) (C) At changwat level in each area in which the CA program is operating, a PSC is organized. This facility is designed to receive the daily reports from the village cadres (through the amphoe forwarding setup). The information is recorded in a series of files and provided to the governor and other officials in the form of a daily CA report for the entire CA changwat. The PSC also issues weekly and special reports on aspirations and subversive activity. Since the major activity of the CA program is information collection and reporting, the description of PSC files and reports is included in the section below on "Activities."

(U) (C) The stated formal organization of the PSC in Sakon Nakhon is shown in Fig. 15, along with the relationship to the center of amphoe CA supervisors and village CA cadres. This organization exemplifies an "ideal" 18-man PSC structure. The PSC in Sakon Nakhon is actually organized somewhat differently from the structure shown in Fig. 15, and its size in March 1968 was 17. Figure 16 illustrates the apparent organization of the Sakon Nakhon center as of that date. As shown in Fig. 16, nearly all PSC members report directly to the chief of the center, with no intervening hierarchy.

(U) In changwats with a smaller number of village CA cadres, such as Nakhon Phanom and Prachinburi Khan, the size of the PSC is commensurately reduced.

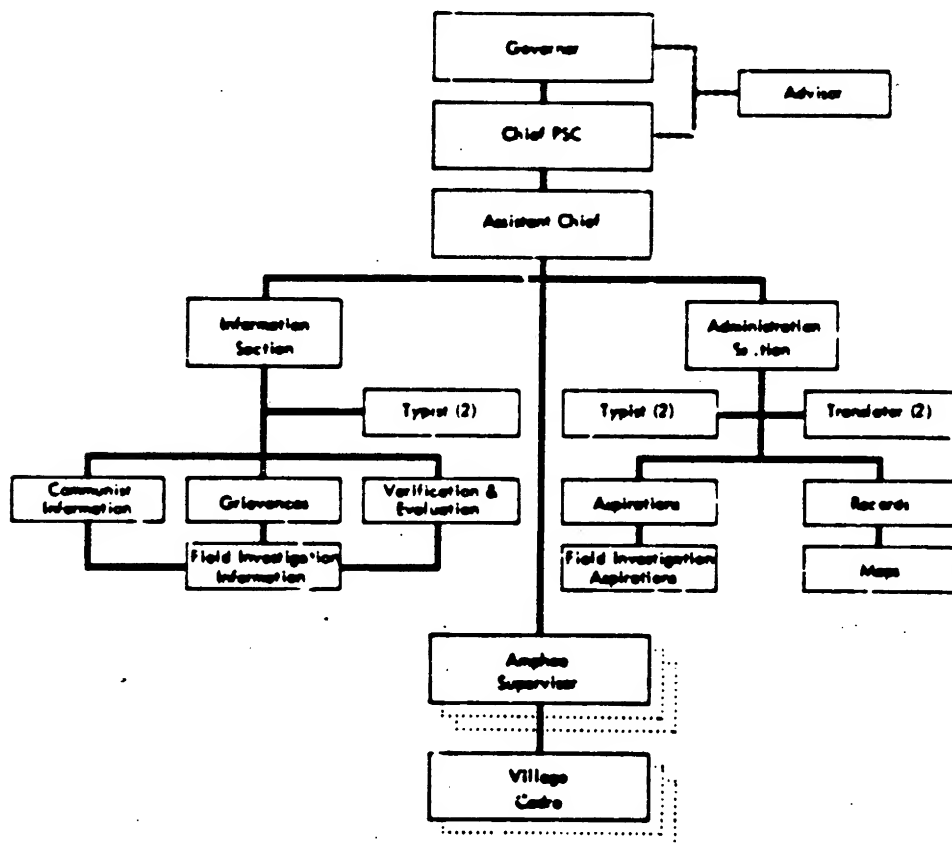

FIG 15 AUTHORIZED ORGANIZATION OF THE PSC IN CHANGWAT SAKON NAKHON

CONFIDENTIAL

PARAMILITARY ORGANIZATIONS AND PROGRAMS

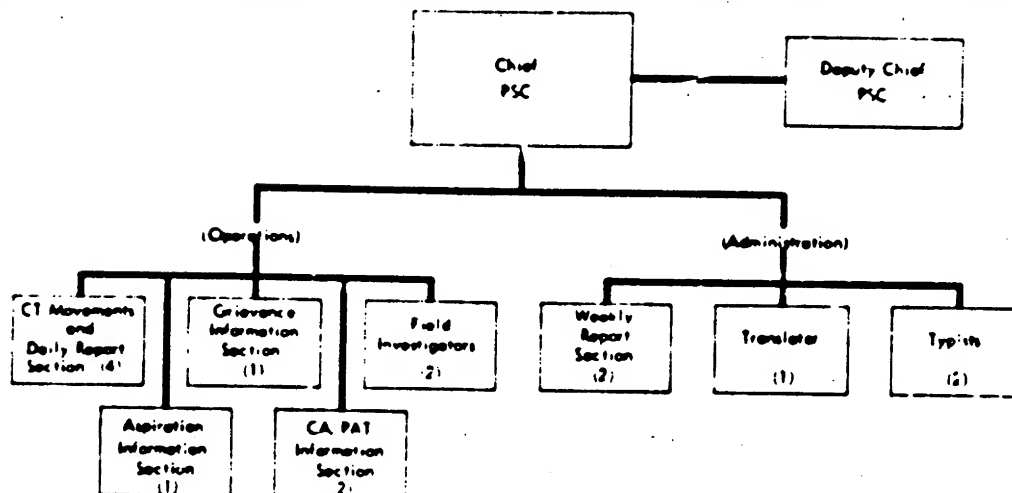

Fig 16 ACTUAL ORGANIZATION OF THE PSC IN CHANGWAT SAKON NAKHON

LOCATIONS AND STRENGTHS

- (U) As of March 1968, the program was operating in Sakon Nakhon and Nakhon Phanom in the Northeast, operations began in Sakon Nakhon in December 1966 and in Nakhon Phanom in October 1967. There is also a small CA operation underway in (Changwat Prachuap Khiri Khan but since this area is outside the scope of this Northeast CI Manual, activities there will not be discussed in this report). Figure 17 shows the locations and strengths of the operational village CA cadres in the Northeast by province. These numbers are summarized in Table 18 along with figures for the Amphoe and Changwat staffs.

Criteria for Village Selection

- (U) The Changwat governor is responsible for selecting the villages in which he desires CA coverage. The objective is to select villages in which the CA cadre can collect a great deal of information on subversive activities. Thus, the ideal village should be located near to an area of insurgent dominance or current operational emphasis, but not be too insecure since the cadre is unarmed and his life may be threatened. Whenever possible, a village is chosen at a trail junction, so that one CA cadre can collect information on more than one village. Location in a village to which the insurgents come for supplies or other support is also desirable. There is a tradeoff between placing cadres in villages with government security forces like PAT or VDC, where the CA man can be protected--and placing them elsewhere in more dangerous locations without security forces to maximize collection coverage.

Insurgent Incidents in CA Villages

- (U) An indication of the security-sensitive nature of the villages in which the CA cadres are functioning is the fact that three of them have been killed by the insurgents; in several other cases specific threats against the lives of CA cadres have been issued. As of January 1968, in addition to the three cadres killed by the ITs, another two village cadres were unable to remain in their villages on a continuous basis because of insurgent activity. One of these cadres was in Amphoe Wanon Nivat, and the other in Phanra Nakhon. As of January 1968 a total of approximately 29 village cadres were residing in villages secured by RTG village security elements (usually VDC or PAT). This number varies slightly, depending on the movement of security forces. In several of these villages the CA cadre, for his own protection, actually lives with the unit in its compound.

Village Coverage in Changwat Sakon Nakhon*

- (U) Amphoe Muang In Amphoe Muang, there is good village coverage in Tambon Tau Nani (one

*For security reasons, precise village locations of CA cadres are not included here. The information may be obtained on a need to know basis from the office of Public Safety, ISCM-Thailand.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

of the most sensitive areas of the amphoe), and another group of village CA cadres is located in villages on both sides of the main Sakon Nakhon-Na Kae road in Tambons Tong Khon and Lao Phon Kho. The rest of the cadres in this amphoe are widely scattered in the southern, central, and western parts of the amphoe; only five are located more than a few kilometers north of the main Sakon Nakhon-Na Kae highway (Route 223) which bisects the amphoe. Several CA cadres are located in villages close to the border with Changwat Nakhon Phanom. Of the 20 total cadres in the amphoe, available information indicates that two are located in villages which also had VDC security teams, and another three are located in villages secured by PATs.

- (U) (C) Phanna Nikhom. Amphoe Phanna Nikhom, with 14 village CA cadres, has two main areas of concentration. One is Tambon Na Nai, the most sensitive section of the amphoe, where five of the nine villages have resident CA men. The remaining 9 cadres are placed in villages within 5 km of the main Udon-Sakon Nakhon highway (Route 22) which bisects the amphoe. Four CA villages in Phanna Nikhom have government security elements: two VDC, one PAT, and one with both PAT and VDC.
- (U) (C) Waritchaphu. In Amphoe Waritchaphu there is good coverage by the CA program in those villages located in the western areas of the amphoe, in the vicinity of the O910 Target Areas. Seven of the 13 CA cadres in this amphoe reside in secured villages, five with VDC in their village and two villages in which PAT security elements are functioning.
- (U) (C) Sawang Daen Din. Amphoe Sawang Daen Din, with 29 men assigned, has the largest number of village cadres. Seven of these cadres are located in villages north of the main highway (Route 22), 14 are along the road or just south of it, and the remaining eight are in villages in the southwestern portion of the amphoe. A relatively small number are functioning in the villages near the Phu Pha Lek and Dong Pra Chao government operational areas. Six cadres in this amphoe are operating in villages secured by VDC or PAT armed elements.
- (U) (C) Wanon Niwat. Of the three cadre in this amphoe, two operate in villages in Tambon Ta Kia and the other is in Tambon Khua Kai, east of the amphoe seat.
- (U) (C) Kut Bak. The 11 cadres in this amphoe provide good overall coverage; many are located in security-sensitive villages. Six of them are in villages secured by PAT or VDC elements.
- (U) (C) Ban Muang. The cadres here are in villages along the main trail in the middle of the amphoe where subversive activity was particularly heavy in 1967.
- (U) (C) Phang Khon. The three cadres in this amphoe are all in the eastern part near the Phanna Nikhom town.
- (U) (C) Akat Amnuoi. Half of the six CA cadres in Amphoe Akat Amnuoi are located in villages on either side of the main road to the south of the amphoe seat. The other three cadres are in widely separated locations, and each appears to be centrally located in a group of several villages. None is located in a village which has government security forces.

PERSONNEL

Recruitment

- (U) (C) The program, when initiated in a changwat, recruits personnel first for the PSC. The head of this facility, because of the sensitivity of much of the information for which he is responsible, and because he reports directly to the governor, must be someone in whom the governor can place full trust. After the PSC staff has been recruited and trained, selection of amphoe supervisors and of villagers to be CA cadres can be initiated. All cadres are selected by the governor and the nai amphoe for the area concerned. The nai amphoes rely to a great extent on the kamars and phuyasibans in their area to recommend good candidates. A team from the PSC is supposed to visit each amphoe to help screen and select candidates.
- (U) (C) The selection criteria are that the candidate must be a native of the village in which he is to work, male, between 18 and 55 years of age, and completely trustworthy. He should be a man who is respected by the villagers.

Pay Scales

- (U) (C) Those officials responsible for the CA program feel strongly that adequate pay is necessary to maintain high motivation on the part of the village cadres and to attract skilled people into the program at the higher levels. Therefore, the pay scale shown in Table 19 has been established for the CA program.*

*This scale is for Sakon Nakhon; in changwats with a smaller PSC, PSC personnel salaries are lower, but all village cadres receive \$300 monthly. CA PAT members receive no extra allowance beyond their regular PAT salary.

Amphoe Supervisor	650
Village Cadre	500

TRAINING

- (u) All village CA cadres receive 4 weeks of special training at Camp Suan Son near Hua Hin, Chantat Prachuap Khiri Khan (the same facility used for PAT training). The training consists of four basic curriculum sections, as follows: (1) nature of the CA program and explanation of the cadre's role in the overall program; (2) political and national training; (3) information collection techniques, including techniques for interviewing villagers, visual observation, census and survey activities, and relationships with the village population; and (4) reporting techniques, including completion of forms used in the program, processing of reports, drawing sketch maps, and procedures for passing the daily reports to the amphoe supervisors and PSC. Since the CA program uses specific reporting forms to a great extent, much of the training is procedural--which form to use when, how to complete it, and how to collect the necessary information.
- (u) Classes in CA training are relatively small, no more than 20 to 30 men. Close attention is paid to individual receptivity to the training, and small evening sessions are held by key instructors and advisers with the trainees to discuss the program and the trainee's role in it. The instructors report that much of the cadres' motivations result from these sessions.
- (u) The CA PAT men who serve in the PAT elements submit a daily report on the village in which the team is located at that time, receiving a 15-day concentrated course of CA training. The same material is presented in compressed form in this session, which follows the completion of regular PAT training. Further information on CA PAT functions is contained in the section on "Activities." CA VSF men will receive a similar compressed course, following regular VSF training.

ACTIVITIES

- (u) Village cadres live among the people in the villages in which they work, the village cadres live among the people, reside with their family in their own home, and are an integral part of the village. They have no uniform, no weapon, and no radio. In some cases there is no evident change when the cadre enters the village following training. In other villages they are known as government development workers. In no case are the villagers aware of the full extent of the village cadre's responsibilities as a government representative.
- (u) Information collected by the village cadres is reported daily to chanawat authorities. These daily reports are sent to the PSC using a wide variety of techniques. Except in Amphoe Chantat, all village cadres within an amphoe forward their daily reports to the amphoe PSC. In Amphoe Chantat, the reports are then forwarded to the PSC. Daily reports are collected daily in Amphoe Chantat, and the cadres send their reports directly to the PSC. Figure 1 shows the flow of information through the CA system.
- (u) The village cadres send in their daily reports via messengers. The mode of transport is by bicycle, motorcycle, or on foot, depending on the availability of bus, motorcycle, or car, and on the stage of the road. In some cases, the messengers must travel to the amphoe level.

~~CONFIDENTIAL~~

UNCLASSIFIED

PARAMILITARY ORGANIZATIONS AND PROGRAMS

Fig 18 FLOW OF CA-GENERATED INFORMATION WITHIN THE CHANGWAT

foot; others use a combination of foot and bus to make their daily trip. Often several CA villages are grouped close to one another, and they use one joint messenger to carry all daily reports to the amphoe supervisor. The cadres receive an extra allowance to cover the costs of the messenger, with the amount dependent on the actual costs involved. In many cases the messengers are relatives of the CA cadre.

- (U) (C) Initial Actions. When he returns from CA training, the cadre's first job is collection of census information on the village where he is, of course, already known to all of the villagers. In most cases the villagers see the CA man not as a government official, but as their representative vis-a-vis the government regarding village development. In relationships with the government, he comes "from the people" and not "from the government." This is the reason why he has no weapon, no uniform, and no official status. In some cases, the villagers may be told that the government has tasked the CA cadre to collect census information and villager aspirations so that better, more accurate, and more timely decisions on government development programs can be made. The cadre, in other words, forms a link between the villager and his government for expression by the villager of his wants and desires.

- (U) (C) The CA cadre collects information on each family in the village, including size of the family, number of children, ages, sexes, and occupation. Based on this information, he prepares a detailed map of his village, showing the location of every house, plus streams, roads, and other distinctive features. Each house is given a number, and all reports indicate family information by this number designation. This census information is updated periodically by the village cadre.

- (U) (C) Information Collection on Subversive Activity. Following initial development of census information, the village cadre begins to develop his sources of information on subversive activity and identity, while continuing to collect information on individual villager's aspirations, wants, needs, desires, and grievances. The cadres use the interview and elicitation techniques they were taught during training. Further discussion of the content of aspirations and grievances collected by the program to date is presented below; this section concentrates on information collected about the insurgency and the subversive infrastructure in the village.

- (U) (C) Subversive Movements and Locations. The category of information most frequently reported is that of sightings of subversives and their locations. This reporting on insurgent movements represents a large advance in the availability of this kind of information over what was previously available at changwat level. Villagers working in the fields may be approached by small groups of insurgents who ask them questions or elicit support; these contacts are reported by the village CA cadre, using identifiable physical or geographic features. The location is translated into UTM map coordinates by the study center. Other villagers may see insurgents in the distance while working in the fields or collecting firewood at the edge of the hills. Their reports often include the number of men seen, a description of their dress, whether or not they had weapons, etc. Some reports indicate the direction in which the group was moving.

*Apparently in most cases this relationship seems to be accepted by the villagers. Several independent sources indicate that in well over half of the CA villages, the cadre is accepted in this role of semiofficial village representative. The current CA Program evaluation will examine this issue in more depth, using interviews with village cadres and other information sources.

**The official in the Changwat Sakon Nakhon CPM who handles all incoming intelligence information estimated that 60 to 80 percent of his information came from the CA program.

CONFIDENTIAL

CENSUS ASPIRATION CADRES

73

- (v) An example of a reported sighting is contained in a CIA daily report for 4 September 1967. This report from Village #101 states that "a group of 10-15 men, dressed like soldiers, entered Ban Muai Khuan Nui. They walked about in the village and then proceeded to Ban Muai Khuan Tai, 5 km. (about 200 meters) west of Ban Muai Khuan Nui. The soldiers then and found they had stayed at Ban Muai Khuan Tai until 2400, when they departed toward the southeast."

Village CA cadre #012 has learned from a source that on 24/09/67, eight strangers, dressed like soldiers, entered Ban Muai Khuan Nui. They walked about in the village and then proceeded to Ban Muai Khuan Tai, 5 km. (about 200 meters) west of Ban Muai Khuan Nui. The soldiers then and found they had stayed at Ban Muai Khuan Tai until 2400, when they departed toward the southeast.

- (u) Another report, this time from Village #101, is illustrative of CA reporting on insurgent locations. This report, dated 1 September 1967, states that:

Village CA cadre #012 learned from a reliable source, a native of Ban Muai Taw, Tachon Fong Deen Din, (14/09/67) that there were about 40-50, including 10 women, who have a base camp at Ban Muai Khuan Nui. The place where water comes from the ground, located about 1 km east of Ban Muai Khuan Nui. The CIA live in and supplied them by people from the Savanna. Ban Muai Khuan Nui is a market, which is taken to them by Vietnamese trucks. There are about 100-150 people there. This CIA base camp is reached by the road used by the Vietnamese. In the morning, before reaching the camp, there are about 20 men serving as guards and as sentries to receive the goods. The guards are standing under the cover of hanging vines in the big trees along the road. Upon arrival of the trucks, the guards give the following signals: (a) during dark they would cry like an owl; (b) during daylight they would cry like a bird. During daylight hours, the CIA would disperse to various positions. Some are disguised as woodcutters, while others stayed with people who are caring for cattle or working in the fields.

- (v) Using this detailed information on CI sightings and locations, the PSC derives maps showing insurgent movement patterns; the CIA are provided each week as an attachment to the weekly report. They present an interesting picture of insurgent movement throughout the country. However, the lack of information on the locations of insurgent locations has been extremely limited. Although the CA reports on locations are timely, the lack of response to the problems of command and control which hinder their use, and the constraints placed on local village security forces with regard to responding to such CA-generated information, all contribute to this result. Certain joint surveillance operations have been initiated, allowing study of the patterns of insurgent movement shown in CA reporting. The information and intelligence base regarding insurgent locations and activities has grown greatly, but it is not enough to provide a complete picture of insurgent movement.

- (v) Subversive identities. The village cadre also provide information on the activities of subversive identities in the village. These reports may describe in detail the activities of subversive identities in the village. Some CA reports describe the activities of subversive identities in the village. Some CA reports describe the activities of subversive identities in the village. Some CA reports describe the activities of subversive identities in the village.

- (v) As of 24 September 1967, a total of 10-15 men, dressed like soldiers, had taken place in CA villages. In the village, the CIA are provided each week as an attachment to the weekly report. In all of these cases, the CIA are provided each week as an attachment to the weekly report. In all of these cases, the CIA are provided each week as an attachment to the weekly report.

- (v) Subversive identities. Another report, this time from Village #101, is illustrative of CA reporting on subversive identities. This report, dated 1 September 1967, states that:

- (v) The treatment of the CIA is the subject of the report. The CIA are provided each week as an attachment to the weekly report. In all of these cases, the CIA are provided each week as an attachment to the weekly report.

- (v) A list of the CIA is the subject of the report. The CIA are provided each week as an attachment to the weekly report. In all of these cases, the CIA are provided each week as an attachment to the weekly report.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

Table 20
VILLAGES IN SAKON NAKHON WITH CA ASSIGNED
IN WHICH FORCED PROPAGANDA MEETINGS
HAVE OCCURRED

LOCATION (Village/Tambon/Amphoe)	DATE/TIME	DESCRIPTION
B. Tanhon T. Tan Naeng A. Sawang Daen Dir	23 Jan 1945	Approx. 64 CTs closed village, held meeting, forced villagers to provide food, shot and killed schoolteacher. CA cadre hid in his house. CTs unaware of his presence in village.
B. Muoi Muoi T. Tau Ngai A. Muang	16 Mar	Approx. 50 CTs closed village, held meeting, forced villagers to provide food, captured village CA cadre and phuyai ban and killed them outside village.
B. Lao Phan Kho T. Lao Phan Kho A. Muang	30 Mar	Approx. 200 CTs closed village, held meeting, forced villagers to provide food, seized radio from Kamnan's house and medical supplies from village public health station. Village CA cadre hid in his house.
B. Muang Khom T. Tau Ngai A. Muang	4 Apr	Approx. 200 CTs, including seven women, closed village, held meeting, forced villagers to provide food, village CA cadre hid in his house.
B. Na Tan T. Tau Ngai A. Muang	6 Apr	Approx. 200 CTs, including seven women, closed village, held meeting, forced villagers to provide food, seized weapon and hand grenade from PAT member while village CA cadre slipped away from village.
B. Na Ang T. Tau Ngai A. Muang	9 Apr	Approx. 200 CTs closed village, held meeting, forced villagers to provide food, shot and killed two villagers. Village CA cadre slipped away from village and reported directly to PSC.
B. Nong Khong T. Tau Ngai A. Muang	11 Apr 1600	Approx. 130 CTs closed village, held meeting, forced villagers to provide food, they did not know identity of CA cadre.
B. Huay Hup T. Tong Khon A. Muang	22 Apr 1830	Approx. 40 CTs closed village, held meeting, forced villagers to provide food. Village CA cadre hid in his house. CTs unaware of his identity.
B. Huay Khon T. Tong Khon A. Muang	24 Apr 1730	Approx. 50 CTs closed village, held meeting, forced villagers to provide food. They clashed with VDC and PAT element, and captured two PAT members. CTs seized their bants and a hand grenade and released them. Village CA cadre slipped away.
B. Chan Pen & B. Bung Sa T. Tau Ngai A. Muang	26 Apr 1530	Approx. 114 CTs, including 12 women, closed these two nearby villages, held meeting, forced villagers to provide food. Village CA cadre slipped away.
B. Lao T. Lao Phan Kho A. Muang	20 May 2000	Approx. 200 CTs closed village, held meeting, forced villagers to provide food. Village CA cadre had resigned in Apr 67 to receive PAT training.
B. Nong Kho T. Na Mong A. Kut Bot	31 May 1730	Approx. 200 CTs closed village, held meeting, forced villagers to provide food, they did not know identity of village CA cadre.
B. Phat Khom Phu T. Na Nai A. Phanna Nithom	4 Jun 1700	Approx. 200 CTs closed village, held meeting, forced villagers to provide food, they took village CA cadre and his messenger and fatally stabbed them outside the village.
B. Bua T. Kut Bot A. Kut Bot	10 Jun 1700	Approx. 150 CTs closed village, held meeting, forced villagers to provide food. Village CA cadre slipped away from village.
B. Kho Hoi T. Kut Bot A. Kut Bot	18 Jun 1530	Approx. 200 CTs closed village, held meeting, forced villagers to provide food. Local schoolteacher fought with CTs, killed two of them and captured an M3, M1, and three hand grenades. CA cadre slipped away.
B. Nong Kho T. Na Mong A. Kut Bot	10 Jul 1500	Approx. 150 CTs closed village, held meeting, forced villagers to provide food. Village CA cadre slipped away prior to entry of CTs.

A. Wanor Niwat			

*Other sources indicate that during some of these forced village meetings, the CTs paid for the food taken from the villagers; the data shown here imply that all food was obtained by force.

Sep 67

average number of days which elapsed between the report and the pickup was 20, the most rapid reaction was 3 days, and the longest gap was 42 days.

(U)

(C) Subversive Intentions. Another kind of information which may be collected by the village cadres deals with the intentions of the insurgents. A villager may report that a group of CTs stopped him in the fields and asked the way to village "X", or the strength of a government unit at village "Y". Another villager may have a relative with the insurgents; it is possible that this relative might tell the villager of insurgent plans, and the villager might pass this information on to a village CA cadre. An example of a CA reporting on subversive intentions is contained in a report from Sakon Nakhon dated 11 October 1967. This report states:

Village CA cadre 0018 learned from source 1-17-5 that on 1004 9 October, a villager from Ban Sang Peen, Tambon Naeng (1710249), told the source and the villagers of Ban Sang Peen that "I know all the locations and am searching for the people who cooperate with the government. I will lead CTs to kill them soon. Any person who cooperates will be killed. I go to Ban Khue Kiang every day in order to train people to take over the government."

(U)

(C) Aspirations. As noted earlier, the CA program collects from the villagers information on their aspirations, needs, and desires. As with information on the insurgent situation, this information is forwarded on a daily basis by the village CA cadres to the PSC. However, information on aspirations may also be passed directly at the village level from the CA cadre to the phuayaban, who reports it through the local administrative chain of command to the khaman and nai amphoe for their action (see Fig. 18). This procedure makes the information available also to the tambon and amphoe Community Development workers, so that they could perhaps take appropriate action or modify priorities already established for their efforts.

(U)

(C) The CA program divides aspirations into two basic categories: individual aspirations of the villagers and collective aspirations of the entire village. This division is made to focus government response, either in terms of development projects and construction of village-wide facilities to satisfy collective aspirations, or provision of desired commodities or services to a particular villager to satisfy an individual aspiration.

(U)

(C) The kinds of aspirations reported by CA cadres in Sakon Nakhon are shown in Table 21, which summarizes aspirations reported from 195 villages over the period 1 March to 30 November 1967. As indicated, more villages have requested wells than any other single item, with blankets a close second, and roads a distinct third. The statistics indicate that about half of all CA villages have desired wells and blankets.

(U)

(C) It is important to note that village and villager aspirations as reported by the CA system do not necessarily reflect a real picture of true village needs and wants. The program has emphasized reporting to the village CA cadre only items for which there may possibly be a government response forthcoming. This explains the large amount of reporting on blankets and seeds,

CONFIDENTIAL PARAMILITARY ORGANIZATIONS AND PROGRAMS

Table 21

ASPIRATIONS REPORTED THROUGH THE CA PROGRAM IN SAKON NAKHON
1 Mar to 30 Nov 67

ITEM REQUESTED	NUMBER OF VILLAGES FROM WHICH REQUEST HAS BEEN REPORTED	TOTAL QUANTITY REQUESTED

Clothing	6	27
Animal vaccine	1	8 (requests)
Cement	1	30 pls

which were likely to be available, as opposed to educational advancement, improved communications, rural electrification, or other similar projects which might be desired by the villagers but which seemed unlikely to be fulfilled by the government. Therefore, use of this information for research on actual village aspirations is severely constrained.

(U) (C) As noted earlier, government response to the aspirations reported by the CA program has been negligible in most cases and nonexistent in others. The only requests to which response was at all adequate during 1967 were those for blankets and seeds, and this was true only because CA officials themselves managed to obtain the desired items. Reportedly, the requests for blankets and/or seeds have been filled in 65 villages. In nearly all cases the request for construction of a road or dam or for a new village well went unfilled. There are indications, however, that the response to CA-reported aspirations will be improved in 1968.

(U) (C) Grievances. Collection of information on villager grievances by the village CA cadres and reporting it through the CA system for appropriate action by the government forms a vital element in the overall CA effort. This activity is an integral part of the CA concept, which calls for the village cadre to act as a link between the villagers and their government for satisfaction of their aspirations and mitigation of their grievances. These actions, according to the concept, enhance the ability of the village cadre to collect information on subversive identities and activities, his primary mission. The creation through the CA program of a reliable and unique structure for reporting villager grievances to governmental authorities who will, hopefully, take appropriate action is very important in creating the psychological climate best suited to optimum functioning of the village cadre.

(U) (C) Special Handling. Since the information collected by the village CA cadres on villager grievances is often very sensitive, special channels have been established to ensure its secure handling and distribution. Often the cadre will personally bring the information to the PSC and report it orally to the chief of the study center. When he elects to include it in a

CONFIDENTIAL

67-00000-1-1

CENSUS ASPIRATION CADRES

77

written report. It is sent with the regular daily report to the PSC via the amphoe CA supervisor. As with the normal daily report, the information arrives at amphoe in a sealed envelope, which the amphoe supervisor does not open; thus, he is unaware that it contains grievance information. Upon arrival at the PSC, the information is passed directly to the officer who handles villager grievances, and goes from him to the chief of the center. The chief may decide that verification of the information is required; if none is required, or once it is completed, the information is sent to the governor in a special report. The information goes only to the governor; no other copies of this report are disseminated. Grievance information is not included in the regular daily or weekly CA reports,* nor is it included in the regular village book or village file. Separate files are kept for grievance information, with access restricted to the grievance officer and center chief.

- (U) (C) **Verification.** At times the CA study center chief will decide that the information reported is so important--or so unlikely--that it must be independently verified prior to informing the governor. To a great extent this seems to depend on the previous reporting record of the village cadre and the faith which the center chief is prepared to place in his report. The chief may verify the report himself, by interviewing the village cadre at length, or even by actually visiting the area of the reported incident. More frequently, a field investigation cadre from the PSC would be sent to investigate the report and prepare an independent evaluation. The amphoe CA supervisor might be asked to participate in the verification, but this reportedly seldom occurs.
- (U) (C) **Volume and Kinds of Reports.** It is difficult to make an accurate estimate of the volume of reports being handled as grievances by the CA program. In Sakon Nakhon the monthly volume seems to range between about 8 and 25 reports per month.
- (U) (C) There are several different kinds of reports included by the CA structure under the category of "grievances." The most sensitive category deals with misbehavior of local government officials and security units. Some examples follow: a member of a local security unit drank too much liquor and fired his weapon in the village; a local telegraph office was overcharging the villagers for all its services; a village teacher was refusing to hold classes; local officials were sponsoring illegal gambling activities; and an official was extorting money from a local merchant.
- (U) (C) Another grievance category deals with misbehavior by villagers themselves. Some wealthy villagers were reported to "act like officials" and take advantage of others in the village. In another case, a villager was reported to be taking land that was not rightfully his. Some villagers from a neighboring village were prohibiting local villagers from cutting lumber in a nearby area, but were doing so themselves.
- (U) (C) A good number of the reports cite the activities of thieves in stealing chickens, cattle, or other livestock. Other reports deal with the villagers' desire for protection from local insurgents.
- (U) (C) Other grievances deal with natural events, such as "caterpillars are eating my rice" or an epidemic of illness among cattle in the village. Sometimes, such reports are listed as "aspirations," in that the villagers desire vaccine or spray; at other times they are listed simply as "grievances" or gripes on the part of the villagers.
- (U) (C) Additional kinds of grievances are directed at the liquor laws and forestry regulations. Villagers complain of inequities in the implementation of these rules, which stop them from engaging in activity which they consider justified.
- (U) (C) **Actions Taken in Response to CA Grievance Information.** As noted above, special handling procedures for this information have been created to inform the changwac governor directly of the grievance being reported. It is up to the governor to take whatever action he deems appropriate. The PSC is not necessarily informed of the action taken and considers its responsibilities ended with the forwarding of the information to the governor.
- (U) (C) In some cases it is known from follow-up reports from the village CA cadre that the activity reported as a grievance has ceased. In a few cases, in fact, the village cadre was threatened by the perpetrator of the offense, but no action was taken by these officials against the CA man. (These cases occurred in the early days of the program in Sakon Nakhon before the handling of grievance information was tightened by instituting special procedures.) In one case, in which the grievance was that the villagers could not remain in their village because they were afraid of the CTs, the government provided them with free land elsewhere and 10 families voluntarily relocated.

*This is true for Sakon Nakhon. In Nakhon Phanom, however, grievance information is included in the daily and weekly PSC reports.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

Province Study Center (PSC)

- (U) (C) The PSC receives the daily reports from village CA cadres (in most cases, through the amphoe CA supervisors), organizes the information, records it, analyzes it (a function really beginning to receive emphasis only in late 1967), and reports it to interested clients (especially the changwat governor) in the form of a daily report.
- (U) (C) Receipt and Internal Flow of Information. The village CA cadres file daily reports on their village and the surrounding area, recording any new information on the subversive situation, village aspirations, and villager grievances. These daily reports are received in the PSC, where the information is broken down into appropriate categories for filing, analysis, and further reporting. Figure 19 illustrates the flow of information within the PSC.

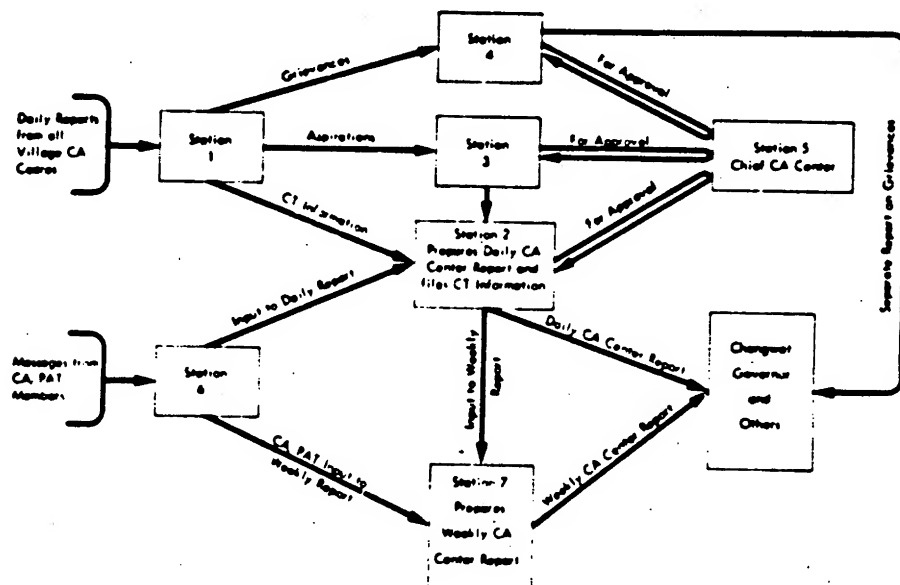

Fig 19 FLOW OF CA-GENERATED INFORMATION WITHIN THE PSC

- (U) (C) All daily reports from the village CA cadres are received at Station 1 on Fig. 19, where they are stamped with a control number and immediately distributed to officials responsible for CT movement, villager aspirations, and villager grievances (Stations 2, 3, and 4 on Fig. 19, respectively). The information on CT movements and subversive activity is rewritten into Central Thai at Station 2, then passed to the PSC chief (Station 3) for his review. It is then returned to Station 2 for inclusion in the PSC's daily report. The daily report prepared by Station 2 also includes inputs from Stations 3 and 6. Grievance information is not included in the daily report.
- (U) (C) The information on aspirations is rewritten into Central Thai at Station 3, passed to the center chief (Station 5), and then returned to Station 2 for inclusion in the daily report. Grievances flow into Station 4, where they are rewritten and passed to the study center chief. Once approved for distribution, they are set forth in one copy of a separate letter to the governor; however, these grievance reports are not included in the daily or weekly reports, nor are they filed with the regular information on the village.
- (U) (C) CA/PAT reports from the CA/PAT members go directly to Station 6, where they are entered, sent to the PSC chief, and then forwarded to Station 2 for inclusion in the regular daily report. For the CA weekly report, however, these reports are compiled by Station 6 into a CA/PAT separate weekly report, which is submitted as part of, but a distinct entity within, the combined weekly CA report.

CENSUS ASPIRATION CADRES

79

(U) Station 7 prepares the weekly report based on information in the daily reports and the CA/PAT weekly reports prepared by Station 6.

(U) Reports Issued by the PSC. The center issues several kinds of reports, each serving a somewhat different purpose. Six different report categories may be identified as follows:

(1) daily report, (2) emergency or immediate reports, (3) in-depth reports, (4) weekly reports, (5) summary weekly report, and (6) special grievance report.

(U) (C) Daily Report. The daily report issued by the PSC provides a summary by amphoe of the information contained in the reports received that day from the village CA cadres and CA/PAT members. The report includes information on CT movements and activities and on village aspirations.

(U) (C) The original copy of the daily report is sent to the changwat governor and a copy is sent to each of the following:

- PSC Village File
- PSC Tambon File
- PSC Amphoe File
- PSC Changwat File
- Each Nai Amphoe (through the CA amphoe supervisor)
- Changwat Palad-Security
- Changwat CPM
- Mayor of Sakon Nakhon Town
- PSC Weekly Report Desk
- American Advisor*

(U) (C) The copy of the CA daily report sent to the governor is endorsed by him with his orders for alerting other members of the changwat staff or other specific persons to the information contained in the report. The original is then returned to the PSC, which notifies the changwat officers by letter of the governor's comments on the daily report.

(U) (C) Emergency Report. When information comes into the PSC which is so vital that it should come to the immediate attention of the governor, it is sent with a cover letter declaring it of emergency value. (These reports are not later included in the daily report, since they have already been seen by the governor.) Such reports are usually generated by a personal visit to the PSC on the part of the village CA cadre who has collected some time-sensitive information. The cadre is usually debriefed in person by the chief of the PSC.

(U) (C) In-Depth Report. The PSC will produce an in-depth report on special subjects, such as a forced propaganda meeting or unusual actions or movements of the insurgents. These reports are usually based on the work of a field investigator and written by the PSC chief. It is planned that the PSC will do more analysis in 1968 than it did in 1967, particularly analysis of insurgent activity patterns; if so, this should result in an increased number of in-depth reports.

(U) (C) Weekly Report. The three basic elements which make up the CA weekly report are information on CT movements and insurgent activity, information on village and villager aspirations, and CA/PAT information (this section of the report is prepared separately). The report is basically a repetition of individual items cited in the daily reports, but usually also includes a brief compilation of aspirations or CT movements reported during the week and analytical comments by the chief of the PSC on the past week's activities and apparent trends in the general situation in the changwat. No new village information is reported in the weekly report. Beginning in late 1967 the weekly report has been accompanied by a map showing all CT movements reported during the week, the size of the group reported, and the direction in which it was moving.

(U) (C) The distribution of the CA weekly report is as follows:

- Changwat Governor (1 copy)
- PSC Files (1 copy)
- American Advisor (1 copy)*
- PAT/CA Office, DOIA, Bangkok (1 copy)
- CSOC Headquarters, Bangkok (2 copies through CPM channels)

*This copy is translated into English and copies of the translation are filed in the advisor's office in Sakon Nakhon and the office of the PAT/CA advisor in Bangkok.

~~CONFIDENTIAL~~

PARAMILITARY ORGANIZATIONS AND PROGRAMS

- (U) (C) Summary Weekly Report. Prior to completion of the regular weekly CA report, a brief summary report is prepared and submitted to the changwat CPM in one copy; no other distribution is regularly made of this report. Preparation of this report was initiated in November 1967 at the request of the governor; the report apparently contains only information on CT movements, not aspirations.
- (U) (C) Special Grievance Report. Information on villager grievances is not reported in the standard daily and weekly CA reports. It is submitted to the governor in a separate letter. This process is discussed above.
- (U) (C) Other Distribution of CA Information. The direct distribution for CA reports lacks two important recipients: RTA Second Army Headquarters-Forward, located in Sakon Nakhon, and the Joint Security Center (JSC-4) in Udon. The Army Headquarters, with an overall responsibility for counterinsurgency suppression operations in Northeast Thailand, has an apparent requirement for rapid and complete receipt of all CA-generated information on CT movements and insurgent activity in and around CA villages. However, the PSC does not disseminate it; reports directly to the RTA, relying on the Sakon Nakhon Changwat CPM to incorporate CA information in its daily report, which does go to the RTA.*
- (U) (C) JSC-4 in Udon, responsible for regional intelligence collation and processing in several changwats, including Sakon Nakhon, would also seem a logical recipient of CA information. It does not, however, receive directly either the daily or weekly CA reports. The American advisors to the CA program in Sakon Nakhon, to circumvent this problem area, pass a copy of the translated daily report to the American advisors at JSC-4, who then use the information with their Thai counterparts in Udon.
- (U) (C) Information on CT movements near the borders of the changwat would appear to be of vital interest to the governors, CPMs, and police elements in adjacent changwats. No formal channels seem to exist to pass CA information of this kind on a timely basis. In the case of Nakhon Phanom, where there is another CA study center, passage of the information may be effected directly via this route. However, for Udon, Kalasin, and Nong Khai, it is up to the Sakon Nakhon CPM to pass the information to the appropriate CPM.
- (U) PSC Files. The PSC maintains a large amount of data divided into various categories in which the CA information may usefully be stored for retrieval purposes. Records of the PSC are maintained in three separate ways: (1) in files, grouped together a variety of papers and reports; (2) as handwritten books; and (3) as special village books.
- (U) (C) The Files. There are 14 different kinds of files kept by the PSC, as follows:
1. The village folders, containing the daily reports for each CA village.
 2. The tambon folders, containing the daily reports grouped by tambon.
 3. The amphoe folders, containing the daily reports grouped by amphoe.
 4. A changwat folder, containing the original copies of the daily report sent to the governor, with his written comments and notes for action.
 5. An incoming correspondence folder, for all correspondence to the governor's office.
 6. An outgoing correspondence folder, for all correspondence to the governor's office.
 7. An outgoing correspondence folder, for all other outgoing correspondence (e.g., to a nai amphoe or an amphoe CA supervisor).
 8. An emergency reports folder.
 9. An in-depth reports folder.
 10. A weekly reports folder.
 11. A summary weekly reports folder.
 12. A folder for all grievance information sent to the governor.
 13. Folders of CA/PAT reports, filed by village.
 14. A folder for all office memos.

*Several spot-checks have indicated that CA information was being passed accurately to the Second Army in this manner. Timeliness, however, was less encouraging, with several days passing between the original CA report and the notification of Second Army via the changwat CPM.

CENSUS ASPIRATION CADRES

81

(U) (C) The Handwritten Books. There are 10 different kinds of handwritten books, logs, or similar records maintained by the PSC, as follows:

1. The entry log for all village CA reports, listing a summary of information only.
2. The entry log for all CA/PAT reports, listing the entire message.
3. The CA movement log, listing each complete report.
4. The aspirations log, listing each complete report.
5. The grievance log, listing each complete report submitted to the governor.
6. A daily log of activities of the PSC, including visits of PSC officials outside the office.
7. A log of all field investigation activity conducted by either of the two PSC field investigators, along with the findings and results of the investigation.
8. A log of all government actions taken against the insurgents based on CA reports.
9. A log of all forced village propaganda meetings reported by village CA cadres.
10. A log listing all aspirations fulfilled by distribution of commodities.

(U) (C) The center also keeps several books of names cited in the CA reports. The names are listed chronologically, along with details relating to the individual cited. These name books are as follows:

1. A record of all Vietnamese names noted in the daily report.
2. A record of all people who have joined the jungle soldiers, from those villages in which there are village CA cadres.
3. A record of all people who have joined the jungle soldiers from villages which do not have resident village CA cadres.
4. A record (with photos) of all insurgents or insurgent supporters captured or arrested, (or who defected to the government) who were previously cited in a village CA report, and who were confined in the Sala Klang jail in Muang Sakon Nakhon.
5. A record of all other captured or surrendered insurgents, subjects of CA reports, who were not sent to the Sala Klang jail.
6. A record of all informants who have offered information to the village CA cadres.

(U) (C) The Village Books. Maintenance of village books is a major effort of the PSC. These books are maintained on each village in the CA program and contain a great wealth of information on the village, as reported by the resident cadre. The information contained in the village books includes the following:

1. A map showing the locations of all houses in the village, with each house identified by number. The map also shows major physical features in and near the village, such as streams or roads. An overlay to this map depicts the houses of identified insurgent supporters in the village. The map is always located inside the front cover of the village book.
2. Village statistics, including population, economics, number of families, religions, schools, and government facilities.
3. Long-range aspirations of the village, requiring government development projects.
4. Personal aspirations of the villagers, requiring individual government assistance.
5. Village residents by family group, listing each village resident. This item also includes a notation of the loyalty of the person to the government or to the insurgents, or his ambivalence toward both.
6. Persons in the village who have been praised or rewarded by the government.
7. Persons in the village who are respected by the villagers.

CONFIDENTIAL

PARAMILITARY ORGANIZATIONS AND PROGRAMS

8. Well-educated persons residing in the village.
9. Government actions which have been taken in the village. This may include education activities, wells, health programs, or other government programs.
10. Government officials who have evidenced "bad behavior" in the village.
11. Government officials who are disliked by the villagers.
12. Poor families in the village.
13. Wealthy families in the village.
14. Families who have been victims of insurgent actions.
15. Families who have members working for the government, at any level.
16. Surrendered insurgents or insurgent supporters now residing in the village.
17. Families who have received aid and assistance from the insurgents.
18. Families who support the insurgents.
19. Insurgents who might possibly be recruited to work for the government.
20. Persons who are ambivalent and waver between the government and the insurgents.
21. Insurgents active in the vicinity of the village.
22. Insurgents active outside the general vicinity of the village, but who have families living in the village.
23. Insurgents residing in the village.

Activities of CA/PAT

- (U) (C) Each of the PATs trained in Thailand has one member who has also received training as a CA representative. This man is often termed a "mobile CA" because he functions as an information collector and reporter wherever his team is stationed, as opposed to the "static" or regular CA cadre who operates at all times in his own home village. The CA/PAT undergoes an abbreviated version of the regular CA training in 15 days.
- (U) (C) The CA/PAT members are each supposed to submit a daily report to the PSC. This report is usually submitted by messenger to the amphoe CA cadre who forwards it to the PSC. However, in several cases CA/PAT reporting is sporadic and irregular. The report may be supplemented by a radio message from the team on the same subject, but this does not occur in every case. The CA/PAT reports at the PSC are incorporated directly into the overall daily report issued by the CA center. In the weekly report, however, they are included as a separate annex.
- (U) (C) CA/PAT reporting responsibilities are similar to those of the regular village CA cadres. However, the CA/PAT members report primarily insurgent movements, with much less reporting on the local insurgent infrastructure and subversive infrastructure in the village. Officials of the CA study center stated their belief that only long-term residents of a village, like the village CA cadre, could ferret out much detailed information on the CT infrastructure. Some reporting comes to the PSC from CA/PAT members on villager aspirations and grievances, but this is quite limited in volume. The volume of their reporting on CT movements is quite extensive, however, comparable to the output of the village CA cadres.
- (U) (C) In essence, the CA/PAT man is equivalent to an intelligence specialist within his village security team. He has received special training in information collection and reporting and on relations with the people. Each evening he is supposed to debrief all team members on the day's activities, eliciting any information of intelligence value. He encourages PAT members to collect information from the villagers.

The CA/PAT receives no additional money beyond his PAT salary. Some of those who report infrequently claim they should be given the extra money for their extra responsibilities.

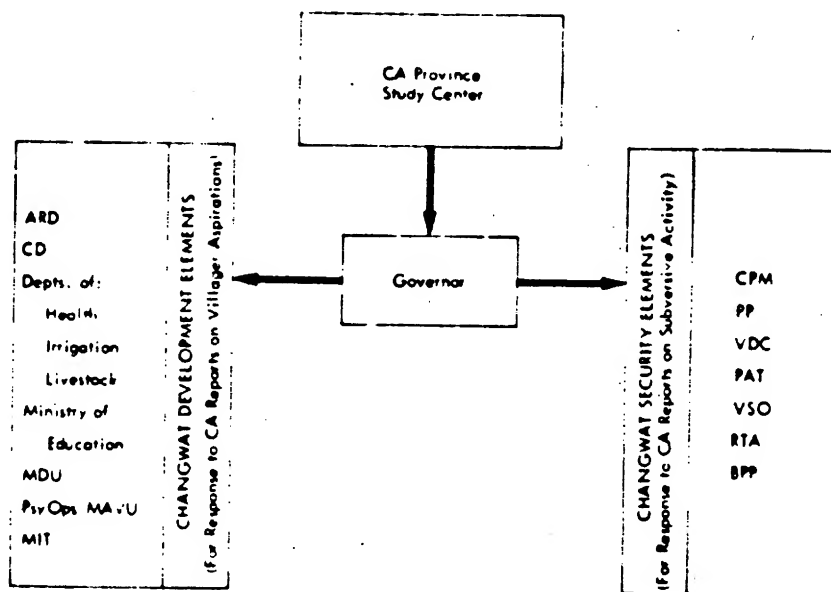

CENSUS ASPIRATION CADRES

83

INTERRELATIONSHIPS

(U) The CA program relates closely to many other ongoing programs and organizations in Sakon Nakhon and Nakhon Phanom. Since the CA effort has been underway for a much longer time in the former changwat, most examples of interrelationships come from this experience.

- (U) Figure 20 illustrates some of the other organizations with which the CA program relates. Primarily, these relationships involve the flow of CA information to the other elements and their response to the information provided. They may be divided into relationships concerning CA reports of subversive activity, locations and identities, and reports of village aspirations. Grievances fall into a separate category, handled directly by the governor with the agency concerned.

(U) Fig 20 FUNCTIONAL RELATIONSHIPS BETWEEN THE CA PROGRAM AND OTHER CHANGWAT-LEVEL ELEMENTS

Relationships with Changwat Governor

- (U) This official fulfills a key role in the conduct of the CA program. The CA operation falls directly under his personal supervision, and the chief of the PSC reports directly to him. All PSC daily reports are sent to the governor, who reads them and adds instructions for action by ministry representatives in response to the CA information. The governor is responsible, in conjunction with the hai amphaes, for selecting the villages from which CA cadres will be recruited and for approving the actual candidates chosen. Flow of CA information to the Second Army Forward headquarters in Sakon Nakhon, to adjacent changwats and to JNC-4 in Udorn depends on the governor and his CPM staff. With out the full and active support of the changwat governor, the CA program could not function properly.

Relationships with Changwat Security Elements

- (U) All CA information dealing with movements, locations, activities, and identities is passed to the appropriate security elements for their action. Regularly included in Sakon Nakhon are the following organizations: (1) the CPM (which receives a copy of the PSC daily report); (2) the central point at changwat level for CPM, PAT, and VSO in Sakon Nakhon--the palat changwat for security (which receives a copy of the daily report); (3) the changwat Provincial Police; and (4) the KIA Second Army Forward headquarters. The latter facilities receive CA information from the changwat CPM. Approve-level police, CPM, PAT, and VSO elements can receive CA information either from their higher headquarters at changwat level, or from the local CPM. All these reports result in direct forwarding of tactical-type information

CONFIDENTIAL

PARAMILITARY ORGANIZATIONS AND PROGRAMS

... from the CA amphone supervisor to the mal amphone for immediate reaction at village level, prior to forwarding to the PSC. This practice occurs fairly infrequently, however, and the usual chain of information flow is from the CA village cadre through the amphone supervisor to the PSC, which then prepares the CA center daily report for distribution.

Relationships with Changwat Development Elements

(u) Relationships with development organizations within the changwat primarily involve the passing of CA information on village and villager aspirations. Hopefully, these organizations will be able to respond rapidly to these reported aspirations; however, in practice response has been either negligible or nonexistent. The organizations most often involved in this process would seem to be the following: ARD, CD, Health, Agriculture, Livestock, Education, Irrigation, plus the MBUS, MITS, and Pysops (MAVU) teams for action in their special areas of expertise. Interrelationships between the CA program and these development elements primarily occur at changwat level between the PSC and the ministry representative concerned--for example, the assistant D officer. This changwat representative would then pass orders for appropriate action to his field agencies at amphone level or below. After the governor sees the daily reports and includes his notations for agency action, the CA PSC communicates directly with the organization concerned to inform them of the village aspiration reported and of the governor's desires for response.

Relationships at the National Level

(u) As a source of information, the CA program relates with several organizations in the North-eastern changwat level, especially Second Army Forward headquarters and JSC-4. Neither of these agencies is a direct recipient of the PSC daily report, however, and reliance is placed on intermediate agencies to ensure timely passage of CA information.

(u) In Bangkok the program is supported by an element of DOLA, which actually functions under the operational control of the OC's Civilian Section. As a result, major program decisions are made jointly by DOLA and CSOC. Within the RIG at Bangkok-level, only CSOC and DOLA are directly concerned with the functioning of the CA program; response to CA reporting by the many other agencies concerned seems to occur only at changwat level and below. These two agencies are the only ones in Bangkok to receive the PSC reports (weekly--but not daily).

Relationships at the Village Level

(u) Within the villages in which they work, the CA cadres relate directly with the other RIG organizations and programs also operating in the vicinity. However, these relationships seem to be mostly between individual village cadres, depending on how open the cadre chooses to be with other government officials about the information and about the full extent of his information. Usually contact is kept to a minimum in order to protect the CA man's village. The village cadre passes the information to the local PSC, who then passes it to the village PSC. On rare occasions, the village cadre reports to local armed security elements information which he collects on subversive elements in the area. In any event, the presence of a PAI, VDC, VSO, RIA, or police element in the CA man's village will provide him with increased personal security from communist reprisal.

Relationships with PAI Program

(u) The CA program and the PAI program are closely related within the RIG and both receive American support. The reporting activities of the CA-trained PAI members were described above. Information from these PAI members flows into the PSC, where it is incorporated into the center's reports. Both CA cadres and PAI members were trained at the same facility, Camp Samsan at Chiang Mai, and the relationship between village CA cadres and PAIs working in their own or nearby villages generally seems closer than the relationship between the CA man and a local PA, PSC, police, or Army security element.

PROBABLE FUTURE DEVELOPMENTS

(u) As of March 1968 several important changes in the CA program were under consideration. The changes are designed to improve the program, expand it, and incorporate additional information sources from new programs, such as VSE.

Program Elements

(u) The organization and functioning of the CA study centers are under examination to determine in which they can be improved. Changes should simplify record keeping and reporting systems, and provide the capability for increased collation and analysis of information reported to the PSC by the CA cadres.

DECLASSIFIED

- (U) ~~(S)~~ In some cases changes may be made to improve the cost effectiveness of the program. For example, the cost of receiving daily reports from the CA/PAT members by messengers seems excessive when it is realized that: (1) the PATs all have radios which could be used to report tactically perishable information and (2) the information being reported by the CA/PATs on a daily basis is seldom used for immediate armed response.
- (U) ~~(S)~~ Government response to the village and individual aspirations reported by the CA program has been very poor during 1967; in most cases practically nonexistent. There are indications that this performance will be improved during 1968. Late in 1967, following a seminar held for all village CA cadres in Sakon Nakhon, the Director-General of DOLA indicated a personal interest in solving this problem and developing an effective RTG capability to respond to these aspirations. Early in 1968 a meeting was held in Sakon Nakhon of all ministry representatives concerned with development and village improvement. This meeting, chaired by the palad changwat for development, discussed the problem of responding to CA-reported aspirations. Future actions by all these officials should do much to improve the situation.

(U) The CA program is currently the subject of analysis and evaluation by ARPA and the Research Analysis Corporation. The results of this research are likely to involve other program modifications, many designed to exploit the information gathering potential of this program, which is now not being fully tapped.

Incorporation of New Sources of Information

- (U) ~~(S)~~ It is planned that each new VSF team will have one man trained as a CA reporter, similar to the "mobile CA" in each current PAT element. These VSF members, trained for 15 days in the techniques and responsibilities of the CA program, will report--probably weekly--on the aspirations and grievances of local villagers and on insurgent movements and identities in the areas in which their team is working.
- (U) ~~(S)~~ The priority changwats for the VSF program are: Sakon Nakhon, Udon, and Kalasin in the Northeast; and Prachuap Khiri Khan in the mid-South. CA VSF reporting in the first and fourth of these changwats will add to the information already flowing into the existing CA study centers. In Udon and Kalasin, new CA centers will have to be created to receive information from the CA/VSF members and from new village CA cadres possibly trained for these areas during 1968.

Program Expansion

- (U) ~~(S)~~ It is likely that the CA program will be expanded during 1968. Plans call for some 25-30 more village cadres to be selected and trained for Sakon Nakhon to complete program coverage in that sensitive changwat. An additional 40-50 village cadres in Nakhon Phanom will be added for the same reason, while more cadres may be added in Prachuap Khiri Khan as well. New changwats in the Northeast may be added to the CA program, probably commensurate with the training and deployment of the VSF in these areas.

~~CONFIDENTIAL~~

~~UNCLASSIFIED~~

VILLAGE RADIO SYSTEM

SUMMARY

(U) The Village Radio System (VRS) is placing FM-1 and FM-5 radios at amphoe and tambon level in many security-sensitive areas throughout Thailand, with emphasis on the Northeast. The primary purpose is to establish a communications capability between the kamnans, nai amphoes, and amphoe police stations.

(U) The VRS operates under the combined sponsorship of the DOLA General Services Division, TSPD Signal Division, and USOM Public Safety Division. As of March 1968 a total of 924 VRS radios had been placed in 10 Northeast changwats: Kalasin, Khon Kaen, Loei, Maha Sarakham, Nakhon Phanom, Nong Khai, Ror Ket, Sakon Nakhon, Udon, and Udon.

(U) The ultimate objective of the VRS program is to place a VRS radio in every tambon and am-
phoe of the APO command area. The system is projected to become the primary communications net for the new Village Security Force (VSF) program.

OBJECTIVES

(U) The primary VRS objective is to establish a network of communications links between civil government officials at amphoe, tambon, and village levels. Greatest emphasis is placed on establishing a communications capability between the nai amphoes and the kamnans. Another objective is to provide security forces in the area with an "as needed" means of communications for reporting, intelligence to and requesting assistance from the amphoe Provincial Police headquarters. This latter objective has gained increased emphasis with the decision to have the VRS provide the communications network for the new VSF program.

ORGANIZATION

(U) The VRS operates under the combined sponsorship of the DOLA General Services Division, TSPD Signal Division, and USOM Public Safety Division. The specific responsibilities of each organization are as follows.

(U) USOM's responsibilities for VRS include providing the FM-1 and FM-5 radios, spare parts, and other support items. USOM also makes available the services of US and Thai technicians to train TSPD and DOLA personnel in the operation, maintenance, repair, and installation of the equipment. These technicians also assist in the conduct of other TSPD telecommunications projects. USOM's Public Safety Division is responsible for US support to the program.

(U) DOLA provides storage batteries, D-cell batteries, antenna masts and accessories, miscellaneous installation material and hardware, and per diem and travel expenses for the police and DOLA members of the fast reaction teams. DOLA also provides gasoline, oil, and maintenance for the police and DOLA vehicles used by the installation teams, plus a petty cash fund for the regional team chiefs' purchase of miscellaneous items. The General Services Division is responsible for carrying out DOLA support to this program.

UNCLASSIFIED

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(U) The TNPD Signal Division is responsible for the installation, maintenance of the radios and other equipment. It is also responsible for training DOLA personnel to install and repair the radios so that DOLA may eventually take over ~~the installation and repair of the radios~~ in these activities by USOM. During 1968, TNPD will take over the responsibility for procuring batteries which is currently being done by DOLA.

FUNDING

(U) Statistics on funding for this program by both the US and RTG for fiscal years 1966, 1967, and 1968 are presented in Table 22. The total US budgets for these 3 years are: \$800,000, \$741,000, and \$2,138,000, respectively. The total RTG budgets for these 3 years are: \$3,415,720, \$2,235,000, and \$12,530,000, respectively. Thus, over this period the RTG is paying for approximately 20 percent of total VRS costs, with the US paying 80 percent.

Table 22
VRS FUNDING

(U)

FISCAL YEAR	US FUNDS		RTG FUNDS	
	COMMODITIES	CONTRACT SERVICES	PROJECT FUNDS	TRUST FUNDS FOR CONTRACT US EMPLOYEES
1966	\$ 725,000	\$171,700	\$3,915,720	\$ 500,000
1967	631,000	150,000	1,660,000	750,000
1968	1,988,000	150,000	11,450,000	1,480,000

CONCEPT OF OPERATION

(U) The VRS radios are being installed in selected amphoes and tambons in security-sensitive areas of Thailand. The installation priority is established by DOLA, TNPD, and USOM. One radio is to be installed in the office or residence of each kamnan in the amphoe, one in the nai amphoe's office, and one in the amphoe police headquarters. (Thus, it is not really a "Village Radio System" but a "Tambon Radio System.") A specific frequency is assigned to each amphoe and its respective tambons so that any station in the amphoe can communicate with any other. Adjacent amphoes cannot communicate with each other because they operate on different frequencies; and, for the same reason, VRS sets cannot communicate with stations in the tambon police station communications network.

EQUIPMENT AND LOGISTICAL SUPPORT

(U) The VRS uses FM-1 and FM-5 radios. The range of the FM-5 varies depending on conditions as follows:

1. In open, flat country:

- 25 miles for fixed station to fixed station (using external ground plane antennas)
- 15 miles for fixed station to mobile station
- 8 miles for mobile station to mobile station
- 5 miles for pack set to pack set (using whip antennas)

2. In jungle:

- 100 yards for pack set to pack set, depending on density of foliage.

The range of the FM-1 is 3 miles in open flat country and 100-880 yards in jungle, depending on foliage density.

* Contact is with a police station, even in the case where the VRS operator would contact directly with a unit which could direct the message down to the tambon station through the police network. In VRS operational areas, the police station is scheduled to receive a second radio set on the VRS-VSF frequency.

UNCLASSIFIED

VILLAGE RADIO SYSTEM

89

(U) The primary power source for the majority of installations is a 12-volt storage battery. Each station is issued two batteries; one to be used and the other to be held in reserve. After 10 days, the battery in use is to be sent to the amphoe police station for charging and the reserve battery put into use. This cycle is supposed to be maintained.

(U) When distance or terrain prohibit transport of the storage batteries to the amphoe police station, the operating site is issued standard D-cell flashlight batteries. In installations where the FM-1 radios are fixed stations, they will also be powered by D-cells. The FM-1 radio requires eight batteries at one time and uses approximately 24 D-cells per month for continuous operation. The FM-5 requires 11 cells at one time and uses approximately 33 per month.

(U) The TNPD Signal Division has established operational and repair facilities at all police regional headquarters. In Northeast Thailand there are two such facilities, at Korat and Khon Kaen. These facilities also serve as a base of operations for the VRS installation teams. The facility in Khon Kaen is staffed by one US technician, four Thai contract technicians, and four police technicians. The Korat facility has one US technician, five Thai contract technicians, and three police technicians. The technicians at these facilities find it necessary to travel extensively because the kamans often do not send their inoperable radios into the repair center.

(U) Spare parts and test equipment are stored at the regional repair shops and are sufficient for most repair work. Radios which cannot be repaired at the regional repair shop are sent to Bangkok. When a radio needs repairing the kaman sends it to the nai amphoe, who, in turn, sends it to the regional repair center.

(U) Installation of VRS radios has proved troublesome and time consuming. During 1966 the project received helicopter support from the USAF for installation of radios in remote tambons. This USAF support ceased in January 1967; limited RTAF H-34 support was received for VRS installation until July 1967, when problems of funding the RTAF for per diem and POL costs forced an end of this support. As of March 1968 this problem still remained unsolved, and no air support was being received from any source for VRS installations. All installations are being made using ground transportation (vehicles, ox carts, bicycles), boats, or walking, as appropriate.

RADIO LOCATIONS

(U) The installation status of the 924 FM-1/5 radios in the Northeast, as of March 1968, is summarized in Table 23 while Figure 20 shows the changwats and amphoes where radios are located. Appendix E to this volume provides data on the exact locations of the installed radios as of the above date. These radios were installed in Phase I of the project, using FY66 funds. Phase I installations were completed during February 1968.¹

Table 23

VRS INSTALLATION SUMMARY
Northeast Thailand

CHANGWAT	NUMBER OF RADIOS INSTALLED
Kalasin	61
Khon Kaen	40
Loei	53
Maha Sarakham	82
Nakhon Phanom	97
Nong Khai	55
Roi-Et	112
Sakon Nakhon	75
Udon	269
Udon	80
Total	924

¹The total number of VRS radios installed throughout the country in Phase I was 1,509. The 585 located outside the Northeast are in the following changwats: Chiang Mai (74), Chiang Rai (126), Nan (71), Nakhon Phanom (78), Pattani (121), Satun (29), Songkhla (24), Uttaradit (70), and Yala (58). Details on VRS locations in these changwats may be obtained from USOM Public Safety Division.

91

RADIO USE

(F) During the course of an investigation on the security environment in five Northeastern amphoes (Ban Dung, Nong Han, and Kumphawapi in Chanyawat Udun, and Sahatsakhan and Kuchirarat in Chanywat Kalasin) conducted in March and April 1968, ARPA researchers obtained much information on VRS activities in the area. Their findings are summarized here to illustrate how the VRS actually operates.

(G) The researchers visited the locations of 46 of the 49 radios in the area. They found that 35 were in acceptable operating condition; six could transmit only and five were completely inoperable. The causes of inoperability were insufficient power (due to weak or dry batteries), blown fuses, antenna damage, or lightning damage. One of the inoperable radios had been so for 9 months and there was little indication that it would be repaired. The other four had been inoperable for an average of 1 month. None of the radio operators maintained the 10-day battery recharging cycle indicated above under Equipment and Maintenance, and few locations had ever been issued a second 12-volt battery. The average recharging cycle was once a month.

(H) All radio nets in these five amphoes operate on some sort of fixed schedule. One net made 16 to 18 scheduled contacts per day, between the amphoe and each of the tambon or village locations; another made only three. Only 5 of the 46 radios remained on a standby status. Those that did not do so usually gave as the reason that to remain on standby would drain the battery too quickly.

(I) The bulk of the radio traffic was of an administrative nature with only seven operators specifically mentioning having used the radio to report insurgent activity. However, many of the operators interviewed indicated that the radio would be used to report CT activity should the need arise. It was noted that few of the radios were located in the sections of these amphoes where insurgent activity has occurred.

(J) In most cases, the principal operator was a khamnan or a phuwaitban; in all cases at least one secondary operator (usually a family member of the principal operator) had been trained in the use of the radio. Five of the 46 radios have been moved from their original location to that of a CSOC joint security team, a village protection unit, or a tambon police station.

PROBABLE FUTURE DEVELOPMENTS

Phase II

(K) The second phase of the VRS effort consists of providing an additional 1,125 FM-1.5 radios throughout the country (all specifically in Northeast chanywats) for expansion of the system in critical tambon locations not covered in Phase I, for replacement of some TR-10 radios distributed under an earlier MAP project, and replacement of 200 radios loaned to CSOC for use in suppression operations. This phase is funded in the CSOM FY67 program. The radios are expected to arrive in Thailand in May or June of 1968, with installation beginning shortly thereafter. Table 24 summarizes the 331 Northeast installation sites for the Phase II radios. They are all allocated to three chanywats: Burirum, Si Sa Ket, and Surin. Many of the 200 radios going to CSOC will undoubtedly be used in the Northeast to support CSOC operations.

Table 24

VRS PHASE II PLANNED INSTALLATIONS
Northeast Thailand

CHANYWAT	NUMBER OF RADIOS			TOTAL
	AT KHAMNAN OFFICE	AT TAMBON OFFICE	AT AMPHUE POLICE STATIONS	
Burirum	4	4	4	12
Si Sa Ket	4	4	4	12
Surin	4	4	4	12
Total	12	12	12	36

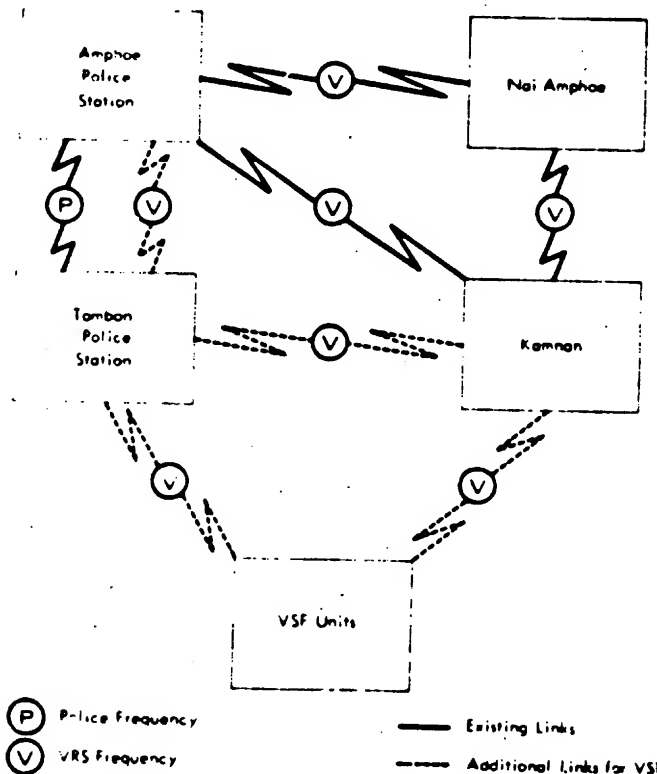

PARAMILITARY ORGANIZATIONS AND PROGRAMS

Phase III

(U) The third phase of the VRS project, funded with FY68 and later money, will provide 200 FM-1 radios and 1,000 FM-5 radios to further extend the coverage of the tambon system.¹ Only 367 of these radios are scheduled for the Northeast, since this area received emphasis in the earlier phases of the program.² These will go to three changwats: Chaiyaphum (73), Korat (178), and Khon Kaen (116), completing coverage of all 15 Northeast changwats.

Support to VSF

(U) The VRS program is scheduled to provide additional radios to develop the primary communications net for the new VSF effort, which is placing local security elements in villages in security-sensitive areas.³ VSF tambons will already have a radio installed in the tambon police station, operating on the police frequency. The frequency of the new radio in VSF villages would be the same as that of the VRS radios in the amphoe. The tambon police station will be provided with a radio on the VRS frequency to permit contact with the kamnan and VSF teams. The relationships between this VSF network, the current VRS net, and the police net are shown in Fig. 21.

(U) Fig. 22 PROPOSED VRS COMMUNICATION SUPPORT TO THE VSF PROGRAM

INTERRELATIONSHIPS

(U) As indicated above, the General Services Division of DOLA, the Signal Division of TNPD, and the Public Safety Division of USOM are involved in running the VRS program. The amphoe police stations are involved at the local level in recharging or issuing batteries for the radios. In those cases where the radio has been moved to a paramilitary unit's facility or a tambon police station, the kamnan, phuvaiban or other local government representative must visit the facility to conduct his routine traffic. Conversely, paramilitary units and police patrols may make use of the village radio to pass messages to the amphoe.

¹The Phase III installations outside the Northeast by changwat are as follows: Chaiyaphum (73), Chanthaburi (71), Phetchaburi (67), Phetchabun (67), Pitsanulok (60), Prachinburi (64), Prachuap Khiri Khan (61), Ratchaburi (106), and Surat (36), for a total of 463. There are an additional 170 spares programmed, making a grand total of 1,200. Details on VRS activities planned for these nine changwats outside the Northeast may be obtained from USOM Public Safety Division.

VILLAGE PROTECTION TEAMS

SUMMARY

- (U) (C) Government officials in four amphoes of northern Ubon have created 25 village security units composed of local village residents and have charged them with the mission of defending the villages in which they are assigned against insurgent attack and of helping enforce civil law. These Village Protection Teams (VPTs) were first developed in mid-1966 in Amphoes Loeng Nok Tha, Amnat Charoen, Chamnan, and Khemarat. A total of 364 men are involved in the program.
- (U) (C) The VPTs are armed primarily with Springfield M'903 rifles. They received 15 days' training at the amphoe centers from an R.A. Special Forces Mobile Training Team. They operate under the command of the phuyai ban, and all team members are designated "assistant phuyai bans" to give them legal authority to arrest and detain suspects. Members receive \$150 per month for full-time service. The teams conduct the full range of activities associated with a static village defense force.

BACKGROUND

- (U) (C) This program was established in mid-1966 under the impetus of the Governor of Udon (Nai Phat Bunyarataphan) and the (then) Nai Amphoe of Loeng Nok Tha (Nai Saisit Phornkeo). These units have at times also been known as "Peoples Defense Volunteers" and "Peoples Defense Volunteer Corps." The program discussed here operates only in Chanvath Udon and should not be confused with similar organizations in other chanvats (although they may be organized along the same lines), VTC, VSO, PAT, or the VSF.

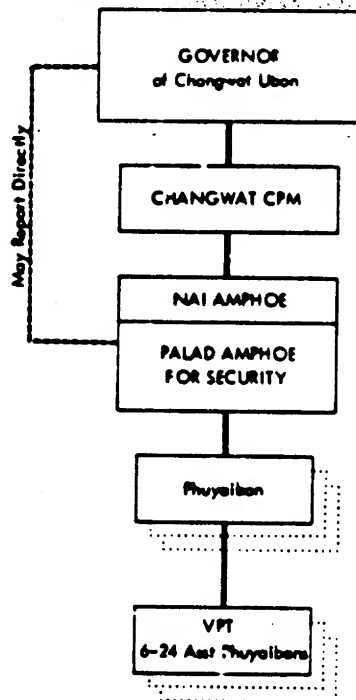

ORGANIZATION

(U) The nai amphoe controls all VPTs in his area. Within the village, the phuyai ban commands the local VPT. All team members have been designated "assistant phuyai bans" to give them legal authority to arrest and detain suspected insurgents and lawbreakers. In this respect the VPT program resembles the VSO and VSF programs. The command and control relationships for the VPT program are shown in Fig. 23.

FUNDING

(U) This program is financed entirely by the RTG. Funds for salaries come from the Udon CP; some of these funds probably originate at CSOC in Bangkok. Detailed information on the size of the VPT budget is not available, although the number of men in the program and the established salary scale indicate that salary costs run about \$650,000 annually.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(U)

Fig. 23: ORGANIZATION OF THE VPT PROGRAM

LOCATIONS AND STRENGTHS

(U) (2) There are 364 members, grouped in 26 village teams. The amphoes involved in the program are: Amnat Charoen, Chanuman, Khemarat, and Loeng Nok Tha. Figure 24 shows those amphoes with VPTs and the number of teams per amphoe. Table 25 presents information on the exact locations and numbers of VPTs in these four amphoes as of March 1968. The number of men per VPT varies from 6 to 24, partly dependent on the number who volunteer for the program. The average team size is 14 men. Team locations were chosen on the basis of the insurgent threat to the area, with teams placed in security-sensitive villages.

PERSONNEL AND TRAINING

Recruitment

(U) VPT members are recruited from and assigned to their village of residence except in one case where VPT recruits from one village were assigned to a team in a neighboring village because enough volunteers could not be found in the latter village. All are volunteers whose loyalty is certified by the phuyasiban. Some VPT members are former CTs.

Pay

(U) The VPT members are paid five baht per day (about \$150 per month), and are usually paid once or twice each month. VPT interviewed in the field said that they would like to be paid more--at least as much as the VDC (\$480 per month), since they are performing a similar function.

Training

(U) The VPTs received their training from an RTA Special Forces unit sent to Ubon from the camp at Phitsanulok. The training was given in the four VPT amphoe seats. Subjects covered in the 15-day course included: use of weapon; day and night patrolling; ambush and retreat; intelligence collection and report; jungle survival; first aid; map and compass reading; and marking of landing zones for helicopter resupply.

CONFIDENTIAL

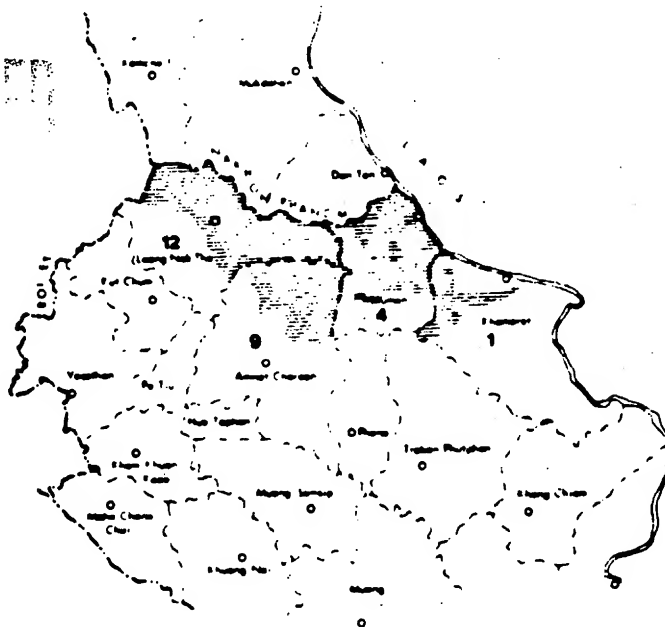

Fig 24 VPT OPERATIONAL AREAS

EQUIPMENTWeapons

(U) The VPT members are issued Springfield M1903 rifles drawn from the changwat VDC headquarters. In Amphoe Loeng Nok Tha they have also been furnished 28 shotguns (single shot). Ammunition for VPT weapons is furnished by the changwat CPM.

Uniforms

(U) VPT members are not issued uniforms or boots by the RTG. However, most of the men have purchased their own green uniforms similar to the standard VDC uniform.

Communications

(U) The 12 VPTs in Amphoe Loeng Nok Tha each had a TR-20 radio, supplied by CSOC. After a short period of use, however, eight of these radios became inoperable and were returned to CSOC for repair. Two of the remaining four radios are located in Ban Sam Yaek, the VPT control headquarters for Amphoe Loeng Nok Tha; there is one each in Ban Dan and Ban Kut Who Kam. It is not known if the other amphoe with VPTs have any radios supplied by CSOC/CPM.

(U) Each tambon in Changwat Ubon has a radio supplied by the Village Radio System (VRS). The data in App E (on VRS radio locations) list only three villages where VPTs are located: Ban Kam Duay in Amphoe Chanuman, Ban Phon Thong in Amphoe Annat Charoen, and Ban Sam Yaek in Amphoe Loeng Nok Tha (which already has two TR-20's). This radio can be used in an emergency by any VPT that can get a message through to the nearest radio's location.

Logistical Support

(U) Logistical support is provided through the chain of command shown in Fig. 23. Support comes primarily from the Changwat CPM, with limited assistance from CSOC in Bangkok. The VPT have no assigned vehicles.

*VPT Control Headquarters for Amphoe Loeng Nok Tha.

Note: There are an additional two VPT members assigned to Loeng Nok Tha Amphoe Headquarters.

ACTIVITIES

(U) The activities undertaken by the VPTs in their assigned villages are primarily those of a static village defense force. For example: in Amphoe Loeng Nok Tha the VPTs are on full-time duty and conduct patrols around the village during the day, check people carrying baskets to the rice fields, patrol through the village, and set up ambushes outside the village at night. Night patrol assignments are made on a rotational basis. In the villages of Ban Dan, Ban Kut Kho Kan, and Ban Sam Yaek one VPT member stands a radio watch at night.

~~CONFIDENTIAL~~

VILLAGE PROTECTION TEAMS

99

(U) RT defectors questioned in Amphoe Loeng Nue Tha said that their groups tried to avoid contact with any village having a VPT. In addition to acting as a deterrent to insurgent attack, the number of criminal cases in VPT villages has reportedly decreased.

(U) Time permitting, VPT members assist in village development and improvement projects.

INTERRELATIONSHIPS

- (U) The VPTs cooperate fully with other RTG security units operating in the local areas. The RTA has elements operating in these four amphoes. Some are assigned to O910 Target Areas 9A and 9B, while others operate as separate elements under the control of the Ubon CPM. They come primarily from the RTA's 6th RCT located in Ubon city. Police security forces also operate in the VPT areas of northern Ubon. They include changwat and amphoe PP elements and forces from the BPP, especially the Mobile Reserve Platoons used as strike forces and reaction elements. When these forces are operating near VPT villages, there is mutual support between the VPT and the military or police unit.
- (U) Changwat Ubon has developed two O10/O20 teams which operate in these amphoes. Their task is to search out and destroy insurgent elements in the hills. These special strike teams rely at times on the VPT for various kinds of support including intelligence, logistics, and communications facilities. The activities of the strike teams combined with those of the VPT provide a unique balance of villager-constituted protection elements both in the villages and in the nearby hills.
- (U) As shown in Table 25, in all 14 VPT villages in Amphoes Armat Charoen, Chanuman, and Khemarat there are other armed protection elements also operational. In nine of the villages VDC are on duty; 10 have PP members; and four have RTA elements providing additional security. These units and the VPTs work together to provide the maximum armed protection to these villages.
- (U) There are two operational tambon police stations in VPT areas of Ubon: one each in Amphoe Armat Charoen and Chanuman. There is no evidence of any direct working relationship between these tambon police stations and the VPTs in these amphoes, although armed support could be provided by the police to a VPT under insurgent pressure.
- (U) As noted above, each tambon in northern Ubon has a radio from the Village Radio System. At times the VPTs may make use of these VRS radios to communicate with the amphoe seat.
- (U) Each tambon in this area is reported to have a CD worker. His activities in stimulating local self-government and village self-help projects are enhanced by the presence of the VPT in these villages as the team provides both armed security and manpower available at times to assist in village improvement projects.

VILLAGE SECURITY FORCE

SUMMARY

- (u) (c) The Village Security Force (VSF) program being developed by the RTC in 1968 is designed to form groups of local villagers capable of providing armed protection and stimulating self-help development projects in their own villages. This new program is based, to a great extent, on the experience in village-level security gained through the VSO, PAT, and CA projects. Plans call for training approximately 20,000 VSF members by the end of 1972. Organizationally, the program falls within DOLA, but its success depends upon support from many other RTG ministries, agencies, and programs. The program will receive commodity assistance from USOM, while the Office of the Special Assistant to the US Ambassador for Counterinsurgency played a special role in its formative stages.
- (u) (c) The VSF units will average 10 men in size and will operate under the authority of the Village Council headed by the phuyaiban. The members will be volunteers who have met health, age, education, and security qualifications. They will receive 8 weeks of training designed to inculcate a high sense of motivation and a strong loyalty to the RTG. They will be armed with carbines and submachine guns, and will be paid \$393 per month.

BACKGROUND

- (u) (c) Beginning in late 1966 the RTC initiated three "pilot" programs--VSO, PAT, and CA--to enhance security in remote villages threatened by harassment from armed communist terrorists. The VSO program trained local phuyaibans and assistant phuyaibans to protect their own villages; the PAT program, in addition to village protection training, gave the volunteers special motivational training and instruction on the conduct and stimulation of village development projects. The CA program develops information on the village and its environs from an unarmed but trained village reporter. The new VSF program draws heavily on the experience and lessons of these three earlier pilot programs, plus that of many other RTG counterinsurgency programs.
- (u) (c) Beginning in September 1967 joint RTC/US working groups were established to develop detailed plans for implementation of the VSF program. These working groups (Intelligence and Area Selection; Training; Budget; and Economic Development and Interface) functioned under the supervision of a joint committee chaired by the Director of the Volunteer Defense Division, DOLA. This group in turn reported to three senior officials designated by the RTG Deputy Prime Minister/Minister of the Interior. They were the MOI Deputy Under-Secretary, the Director-General of DOLA, and the Director of CSOC's Operations and Coordination Center.

*Because this program is in the formative stages at this writing with planning still underway, information on training schedules, team composition, deployment, pay, and other specific details should be regarded as tentative. The information provided represents the latest available data as of May 1968. Changes in the VSF concept or in its programmatic form will be reflected in revisions to this volume.

(U) These working groups and supervisory committees developed recommendations on such matters as the priority locations for VSF units, content of training, equipment and weapons to be provided to VSF members, legal status of the members, and administrative structure for the new program. Problems of budget and of US support were discussed and resolved. Additional VSF instructors were recruited, and the location for the VSF training site was determined. As of this writing (March 1968) details concerning specific budget allocations and facilities at the training site were still being determined, and the first class for training VSF instructors was awaiting their resolution. Plans called for a 5-week instructor-training session, followed shortly thereafter by the first group of 400 VSF trainees.

(U) The VSF concept, drawing heavily on the PAT experience, calls for the team of local villagers to provide security with their weapons, which they are trained to use effectively. At the same time, the conduct of development projects and comportment of VSF members, instilled by the special motivational training, will develop the kind of rapport between the team and the villagers seldom found in remote village situations. This rapport will encourage residents to provide the team with information on the identities, activities, and intentions of subversive elements in the vicinity. This information, in turn, will permit the small VSF team to gain the initiative and, over time, create a permanent viable security environment in the area.

ORGANIZATION

(U) The key element of the VSF, the village unit, is to be composed of 6 to 14 full-time members, depending primarily on the size of the village. (Villages with less than 50 families will have six VSF members; villages with 50-100 families will have 10 VSF members; and villages larger than this will have 10-12 VSF members.) Most teams will have 10 members. The unit will operate under the general direction of the village council, with day-to-day operation controlled by the team leader. At tambon level, a newly formed "tambon control team" will direct operations of all VSF elements in the area. The VSF will be supported by the DOLA administrative structure at amphoe, changwat, and national levels, and closely coordinated with all appropriate RTG ministries and agencies.

National Level

(U) The overall national-level organization for VSF is shown in Fig. 25. This structure, newly formed in March 1968, has been approved by the Commander of CSOC. The RTG officials shown in directing each element were to assume these roles at that time. Many will divide their time between VSF and their other responsibilities, although key operating officials are assigned to the VSF program on a full-time basis. Figure 25 illustrates the formal organizational structure; in actual fact those officials on the lower line report directly for most matters to the VSF Project Director.

(U) The National Policy Committee, chaired by the Deputy Under-Secretary of the Ministry of Interior, will be composed of representatives from ARD, CD Department, DTEC, Budget Bureau, INPD, and DOLA, plus others. This committee is scheduled to meet on a monthly basis to review the overall progress of the project and determine steps required to resolve policy issues and institute actions to improve and accelerate this effort.

(U) The Coordinating Committee, chaired by the VSF Project Director, will be responsible for coordinating the work of specialized working groups and the established VSF administrative structure. Membership of this committee will consist of senior operating-level representatives from the RTG ministries and organizations principally concerned with implementation of the VSF program (DOLA, CSOC, RIA, INPD, Budget Bureau, DTFC, and others as appropriate), plus their US counterparts. The committee is scheduled to meet regularly on a weekly basis.

(U) Support for the large VSF training effort comes from the Training Support Section, providing inputs to the Deputy Project Director for Training (who is also the head of CSOC's Civil Section). The top commander is the Governor of Changwat Prachuap Khiri Khan, and training responsibilities are divided between a Chief of Instruction and a Chief of Training Operations.

(U) The primary operational section for VSF planning and implementation will be the VSF Division under the Deputy Project Director for Administration and the Chief of Administration. The Foreign Affairs Division will handle contact with the US and other countries, while the Programming Division will handle budget and financial matters. The Special Division will administer the ongoing PAT and CA programs and relate them to the VSF effort. The heads of all these sections are assigned full-time to the VSF effort.

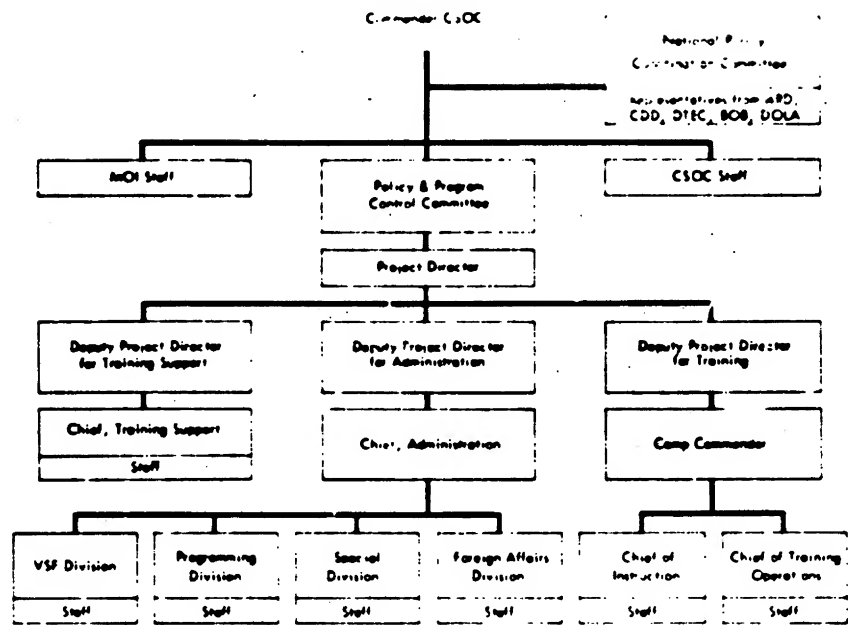

Changwat Level and Below

(U) The structure to be formed for control of the VSF effort at changwat level and below is shown in Fig. 26. In each changwat selected for establishment of VSF units, three new offices

(U)

Fig 26 PROPOSED CHANGWAT LEVEL ORGANIZATION OF THE VSF PROGRAM?

PARAMILITARY ORGANIZATIONS AND PROGRAMS

cers for VSF are to be assigned under the governor: a palad changwat for VSF and two assistants for operations and development. In VSF amphoes two new officers will be assigned to assist the palad amphoe for security with operations and development.²

(U) At tambon level a new position (also a palad amphoe) is to be created.³ This officer will be the chief of a "tambon control team," composed of himself, the kamian, and the head of the tambon police station. The team will be responsible for the implementation of the VSF program and for control of actions of individual units within the tambon.⁴ It will also have responsibility for local VDC elements, Village Radio System nets, and the assets of tambon police stations. The men assigned to most of these new positions would probably be RTA officers (captains/majors) transferred to DOLA for this assignment. This was the method used to staff the new palad changwat-security and palad amphoe-security positions created to support the VDC expansion of 1966-67.

FUNDING

- (U) (C) The VSF project is jointly supported by the RTG and the U.S. RTG support covers monthly payments to VSF members, construction of training facilities, provision of commodities for VSF development projects, and a myriad of other important categories. The budget for FY68 for VSF is approximately \$23,000,000, with expenditures of \$39,000,000 projected for the following year. Money for the project is allocated by the Bureau of the Budget to DOLA and CSOC.⁵
- (U) (C) US support for FY68 is estimated at \$1,500,000; the figure for FY69 is twice as large. Approximately 80 percent of the total USOM assistance is in the form of commodities. The US will provide weapons (carbines, rifles, and submachine guns) and ammunition for the VSF, vehicles for administrative and logistical support of deployed teams and the training operation, FM-175 radios provided to VSF villages, and other necessary commodities.⁶

LOCATIONS AND STRENGTHS

Designated Areas

(U) There are 10 priority amphoes for VSF assignment during 1969. The nine VSF amphoes located in the three Northeast changwats of Kalasin, Sakon Nakhon, and Udon are shown in Fig. 27 (the 10th, Amphoe Kui Buri, Changwat Prachuap Khiri Khan is in the mid-South). Table 26 lists the 10 priority amphoe and shows the schedule for the first three VSF training classes.

Table 26

PROPOSED VSF LOCATIONS AND STRENGTHS IN 1968

TRAINING CLASS	CHANGWAT	AMPHOE ^a	NUMBER OF MEN
1	Prachuap Khiri Khan	Kui Buri	200
	Udon	Ban Dung	200
Total			400
2	Udon	Nong Han	200
	Udon	Kumphawapi	200
	Kalasin	Sahatsakhan	300
	Kalasin	Kuchinarai	300
Total			1,000
3	Sakon Nakhon	Kut Bok	
	Sakon Nakhon	Mueang	
	Sakon Nakhon	Phanna Nikhom	
	Sakon Nakhon	Warin Niwat	
Total			1,000 ^b

^aAt the time of their selection for VSF deployment, Amphoes Kumphawapi, Phanna Nikhom, and Warin Niwat had not yet been sub-divided into King Amphoes S. Thai, Phong Khan, and Ban Muang, respectively. As teams will be formed throughout the area of the original amphoe and the new king amphoe, all 12 have been shaded on Fig. 27.

^bAllocation of these 1,000 trainees among the four amphoes in Sakon Nakhon has not yet been made.

The RTG Civil Service Commission has stated that the manpower required for these new positions cannot be made available until FY69 (beginning 1 October 1968) at the earliest.

UNCLASSIFIED

VILLAGE SECURITY FORCE

105

Fig. 27: PRIORITY LOCATIONS OF VSF ELEMENTS BY AMPHOE

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(U) These tambons proposed by the changwat governors for formation of VSF units are shown in App A, along with the actual tambon-level locations of other paramilitary programs. A VSF unit is to be formed in each village of a VSF tambon.

(U) Present plans call for training approximately 20,000 VSF members (covering about 2,000 villages) by the end of 1972. The projections will be reviewed by the National Policy Committee at appropriate intervals based on evaluation of VSF training and changing security and economic conditions.¹

Area Selection Criteria

(U) VSF units are to be established in areas where intelligence indicates that subversive organizational efforts are underway, but which have not been subject to operations by large insurgent elements.² The areas for VSF units will be related to the locations of other security and development organizations, especially the tambon police stations.^{3,4}

(U) The working group on Intelligence and Area Selection selects changwats and amphoes for VSF formation. Authorities in the area, especially the governor and nai amphoes, then propose to DOLA the tambons in which VSF units should be formed; these recommendations are then approved or rejected by DOLA. Tambon selection criteria are supposed to follow the standards set forth in the CSOC Concept and Plan No. 110.¹

PERSONNEL

Method of Selection

(U) In the tambons selected for VSF formation, phuvaibans and kamnans (with the advice of the village council) are to solicit applications from volunteers and select candidates for each village. Two or three alternates are also to be named. The men selected will undergo an initial security check by the tambon control team, followed by an amphoe-level security check and a physical examination. Candidates eliminated by these procedures are to be replaced by a designated alternate.¹

Selection Criteria

(U) The primary objective is to select villagers for the program who closely identify with the village and have a stake in its security. Villagers selected for the VSF program are to meet the criteria set forth in Local Administration Act No. 4, BE 2510 (often termed the "VSO Act"). Particular consideration is to be given to the acceptability of candidates by their fellow villagers and to the special physical and mental requirements for motivational, paramilitary, and village improvement duties. For example, an age of 20-35 years is preferable, as well as previous experience in the RTA, police, VDC, PAT, or VSO programs, or two years spent as a novice monk.¹

Legal Status

(U) Local Administration Act No. 4 forms the legal basis for creation and operation of the VSF. As in the VSO, VSF members are to be designated assistant phuvaibans, with commensurate status and authority. Except for those cases set forth in the statute, VSF members will be subject to RTG civil jurisdiction in the same manner as other citizens of Thailand.

(U) One of the primary VSF missions is to protect the village population, its leaders, and any visiting government officials from insurgent action. In accordance with existing legislation, when pursuing this mission they will have the power to apprehend and detain suspected individuals until investigation can be undertaken by the police.

Pay

(U) It is intended that all VSF members will receive monthly allowances totaling \$393.² This is composed of the regular VSO monthly salary of \$50, a daily food allowance of \$5 for 20 days per month (when serving in their home village), a per diem allowance of \$16 for the remaining 10 days (when away from their village), and a special honorarium providing an additional \$1,000 per year (or about \$83 per month). Payment is to be made through regular

(U) ¹ Political constraints within the RTG and over-riding security requirements appear to affect this criteria for VSF locations. For example, the nine priority amphoes in the Northeast include some areas which have, in fact, been the site of quite heavy insurgent activity (e.g., Banon Nueat, Kut Bah, Ban Dung). However, these are precisely the areas which require additional village-level armed protective elements as soon as possible, and, therefore, RTG agencies such as CSOC and the local governors are likely to pressure for VSF units to be formed there. In addition, the deteriorating security situation in Kut Buri and the royal interest in this area led to its inclusion in the first group of VSF training areas. Tambon Kut Buri, the "hottest" of the five tambons in the amphoe, is apparently being excluded from the VSF program, being left to the police, Army, or other security forces to handle.

CONFIDENTIAL

UNCLASSIFIED

VILLAGE SECURITY FORCE

107

DOLA administrative channels, with the nai amphoe (or the palad) actually delivering the payroll to the phuyasiban who will pay the team members.

(U) During training VSF members receive a per diem allowance of \$16. Costs of transportation to the training site are paid by the VSF program.

TRAINING

Curriculum

(U) All VSF members will receive 8 weeks of training, given at the VSF Training Center at Changwat Prachuap Khiri Khan. The curriculum consists of the following six basic subject areas:

1. Understanding subversive operations and tactics.
2. Village protection techniques (weapons, tactics, individual skills).
3. Information collection and reporting.
4. Political, motivational, and ideological training.
5. Organization and stimulation of village self-help projects.
6. Skills of immediate use in conducting village development projects.

Each training course is to be concluded with a 2-week field exercise in which each VSF team will practice what it has learned, under the supervision of VSF instructors.

(1) The development projects to be undertaken by VSF teams fall into five basic categories:

1. Construction or improvement of shallow wells.
2. Construction of small dams or reservoirs.
3. Construction or improvement of village tracks and roads.
4. Conduct of small agricultural projects.
5. Construction or repair of local schools, wats, or public buildings.

To be skilled in carrying out these projects, the VSF members receive instruction in carpentry, masonry, animal husbandry, and agricultural practices and modern methods, as well as in the organization of village development projects and of techniques to motivate the villagers toward self-help operations.

Leadership Training

(U) Following the field exercises, one week of leadership training is provided to one member of each VSF unit. This team leader is to be selected by the training staff on the basis of demonstrated leadership capability.

Specialist Training and Modifications to the Course

(U) Two-week sessions are given to team specialists following regular training. Included is the special course to train one CA member within each VSF unit. This man will serve as the intelligence specialist within his team and will report his information to the changwat CA collection and analysis center through regular CA channels. The activities of the CA/VSF member are basically the same as those of CA/PAT members described in the PAT and CA sections of this volume.

(U) The length of VSF training and its curriculum and content may be modified as the program progresses, in the light of experience gained. In addition, VSF members and units are to receive periodic in-service training. The PATs and/or the staff of the tambon police stations are presently being considered to supply this in-service training.

VSF Instructors

(U) Since one of the critical areas of VSF training is the political and motivational instruc-

The selection of a site for VSF training has been one of the primary causes of delay in program implementation. After several other sites were considered but then proved unavailable for a variety of reasons, the Prachuap site was chosen. It was formerly used for VSE training, and, without improvements, it has a maximum capacity of approximately 100 trainees at a time. Therefore, construction of new facilities and buildings--even of a very temporary nature--is necessary before the first class can get underway.

PARAMILITARY ORGANIZATIONS AND PROGRAMS

tion, the instructors to impart this subject area must be specially selected and trained. Those instructors who participated in similar training with the PAT program have been recruited as the cadre for the VSF instructor group.* However, it was determined that 53 additional political/motivational instructors were required for the VSF effort. To obtain these men, nominations were requested from various RTG agencies, and names of candidates were received. The new instructors have come primarily from CD, DOLA, Ministry of Agriculture, and others. They have been transferred to CSOC for VSF instructor duty. These new political/motivational instructors all are to receive special training in advance of the first regular class for VSF trainees. This 5-week course, a condensed version of the regular VSF course, places emphasis on the content of the political/motivational instruction and on teaching techniques. The Chief of VSF Training is the principal instructor for the VSF instructor training session.

(U) VSF instructors for weapons and tactics are obtained from the RTA and TNPD. Instructors in development skills come from RTG ministries engaged in such work; some are "guest lecturers" assigned on a temporary basis; others are assigned to CSOC as full-time VSF instructors.

EQUIPMENT AND LOGISTICAL SUPPORT

(U) VSF members are not provided operational "uniforms" or equipment, such as boots or jackets. They are to be armed with M1 and M2 carbines and M3 submachine guns; they have operational control of the village radio provided to the village upon arrival of the VSF teams; teams have medical first-aid kits.¹

Weapons

(U) For the standard 10-man VSF team the weapons package will consist of:

- four M1 carbines,
- four M2 carbines, and
- two M3 submachine guns.

This will provide 60 percent of the team with automatic weapons.

(U) The TNPD, through its cangwat, amphoe, and tambon echelons, exercises its traditional role with respect to the registry and control of weapons in the possession of citizens who are not members of the RTG military forces. VSF weapons, which are to be provided to DOLA by USOM, will be delivered at the training site where they will be registered by TNPD officials. They will then be shipped under police control to VSF amphoe seats where the amphoe police will distribute the weapons to tambon police stations for registration in accordance with Thai law, and issue to VSF members, a specific weapon by number being assigned to each VSF member by name. Replacement arms and ammunition are to be issued through the same channels, as required. Items requiring repair will be forwarded to the appropriate police repair facility.²

Communications

(U) Each village designated to have a VSF team will receive an FM-1 or FM-5 radio, as part of the ongoing Village Radio System (VRS) operation.³ This radio will net with existing VRS radios held by the khaman, nai amphoe, and amphoe police station. An additional radio on the VRS frequency will be provided to the tambon police station. These communications relationships are shown in Fig. 28. As with regular VRS tambon radios, the TNPD is responsible for radio repair.

Support to VSF Development Projects

(U) Village development projects stimulated or conducted by VSF teams are expected to fall into one of the five categories noted in Table 27. Although the costs of these projects will vary greatly from case to case, some typical cost figures are shown.

(U) To the extent that the costs of these projects exceed the contributions of local village residents, the additional costs are to be covered whenever feasible within the budgets of the DOLA Shallow Well Division, ARD (including the Amprue Farmer Groups), CD, Ministry of Agriculture, Royal Irrigation Department, or other agency as appropriate. In this manner VSF village

* The Chief of PAT Instruction has been recruited as the Chief of VSF Instruction, ensuring that the experience gained in political/motivational training will be incorporated into the VSF program.

³ See the section describing the VRS effort in this volume. The current USOM commitment only covers 949 VSF villages; provision of radios for VSF villages in 1969 and following years will depend on field availability and project progress.

VILLAGE SECURITY FORCE

109

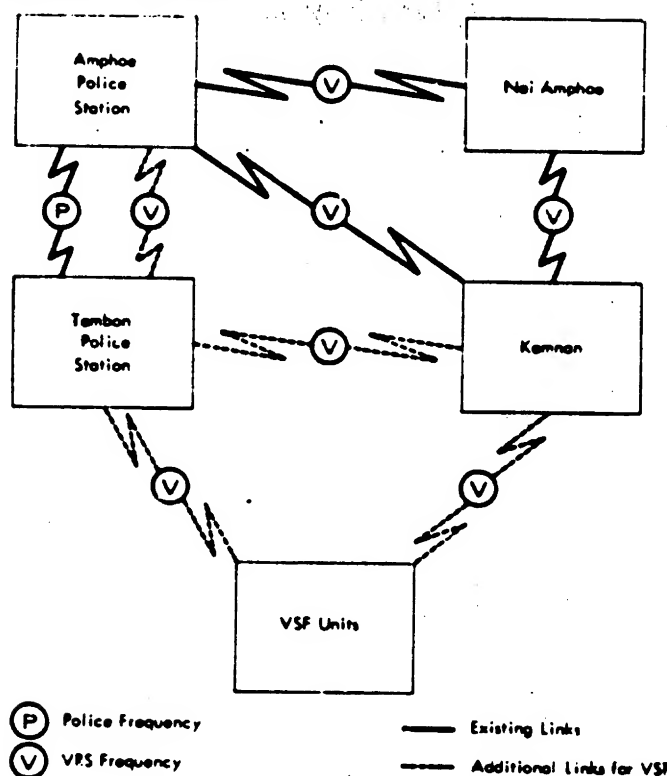

Fig 28 PROPOSED VSF COMMUNICATIONS NET

Table 27
COST ESTIMATES FOR VSF VILLAGE DEVELOPMENT ACTIVITIES¹
 (Based on 400 Villages with VSF teams during the first year of the program.)

ITEM	NO. OF PROJECTS (First Year)	ESTIMATED COST PER PROJECT	ESTIMATED TOTAL COST
Construction or Repair of Shallow Wells	600	\$2,915	\$1,749,000
Construction of Small Dams or Reservoirs	100	5,000	500,000
Construction or Improvement of Tracks and Ponds			
Track Repair or Construction	400	(No. cost, labor and tools locally available)	
Bridge Repair or Construction	50	3,500	175,000
Culvert Repair or Construction	50	2,850	142,500
Construction or Repair of Schools, Wats, and Public Buildings	200	4,000	800,000
Agricultural Projects	(No. and Cost of projects not yet determined)		

Improvement activities will not duplicate existing programs of other agencies, but will help to expedite their implementation.

(U) In those cases where the necessary commodities and services cannot be furnished by other RTC agencies--whether because they cannot match the required technical scope, financial capability, or timeframe of the VSF project--the items may be procured at tambon, amphoe, or changwat level, according to their availability. The VSF budget contains an allocation of \$3,000,000 to purchase commodities which cannot be furnished by other RTC agencies.¹ This avoids problems of timing, transport, and warehousing connected with procurement from Bangkok; it also stimulates business in the local areas. Funds are made available to the naled amphoe for VSF in the same manner as such funds are made available to CD officials at the lowest administrative levels. Distribution of commodities to the VSF villages is usually made by truck, one of which is provided (by USOM) to each VSF amphoe.

ACTIVITIES

(U) Activities of VSF units and members in their villages may be divided into three basic categories: village protection, intelligence and psychological operations, and village development. Throughout the entire range of their activities, one of the primary objectives of the VSF members will be to elicit a positive commitment from the villagers toward their government and its institutions.¹

Village Protection

(U) The VSF units are to provide protection to their village on a 24-hour per day basis. They will combat insurgent assassination and intimidation teams and small armed subversive bands which the unit is capable of handling with its own weapons. When faced with large insurgent bands in excess of their defensive capabilities, VSF units are--as much as possible--to evade combat and call for reinforcements. They will, of course, defend themselves to the maximum extent when attacked, while requesting assistance from RTC reaction units outside their village (including tambon and amphoe police, VDC, and changwat-based police or military units).¹

(U) Each VSF unit is to develop and carry out a defense plan for its village. This will include patrols within the village and in the contiguous area on the perimeter; establishment of sentries and listening posts; establishment of hidden warning signals; and plans for defense of the village radio, term weapons (and any villager-owned weapons), and of other supplies of value to the insurgents, such as food and medicine.

(U) VSF units are to attempt to stop support from their village to insurgents and outlaws, using both persuasion and force when necessary. In pursuit of their village protection role, they will make contact with tambon/amphoe police and VDC patrols in the vicinity of their village, and may organize, train, and lead a village auxiliary force if the security situation so warrants.

Intelligence and Psychological Operations

(U) VSF members are to alert the villagers to the dangers posed by the subversives and directly and indirectly counteract subversive propaganda. They will identify, report, and attempt to neutralize or convert village subversive elements and their supporters. They will also teach other villagers how to assist the VSF unit in this role, and organize intelligence and information cells for reporting on insurgent organization and methods of operation in the area near to the village. Each VSF unit will have one member who has received extra training as a CA reporter; this man is instrumental in the team's intelligence effort.

Village Development

(U) The VSF teams are to stimulate villager effort toward the five kinds of village development projects listed in Table 27; team members will participate fully in the work of the project. The team will work with the village council, tambon council, village development committee, CD village organizer (patanakorn), village health committee, and others in determining which projects to undertake, how to organize them, arrange for purchase of needed items, and obtain necessary financial support. Whenever possible, the projects are to be supported by regular agency program allocations; VSF has been provided with a separate budget allocation for those instances where progress must be made unilaterally.

INTERRELATIONSHIPS

(U) The RUC Cabinet of Ministers has instructed all appropriate ministries, departments, and agencies of the government to provide maximum support and assistance to the new VSF program.

CONFIDENTIAL

VILLAGE SECURITY FORCE

111

and to cooperate closely to ensure its speedy progress. Whenever possible, these agencies are to place priority in their projects and programs toward efforts in VSF villages and areas. Examples of the kinds of activities which directly support the VSF effort are presented below, grouped into the three major kinds of VSF activity. Many of these programs are currently underway in the 10 priority VSF amphoes, while others are planned for initiation in these areas in the near future.

Interrelationships Concerning Village Development

(U) Accelerated Rural Development (ARD). The overall ARD effort is to give priority, whenever possible, to public works and related projects of benefit to VSF areas. Emphasis is to be placed on ARD support to VSF-initiated village development projects. When possible, ARD main-road and service track operations should permit increased access to VSF villages and operational areas. In their own work to repair and improve village tracks and roads, VSF teams are to receive assistance from ARD in construction of bridges and culverts. Such assistance is likely to involve commodities (such as lumber, nails, hardware, culvert tiles, and cement) and technical advice. Upon occasion ARD construction equipment operating on nearby projects might be diverted for brief work in direct support of VSF village development efforts (e.g., a bulldozer may be used for a half day to cut a new track to a VSF village). The Amphoe Farmers Groups (AFGs) in VSF areas will be an important source of support to the teams. The Mobile Medical Teams operated under ARD auspices will, to the extent feasible, be reoriented to provide medical assistance in VSF areas.

(U) All 10 priority VSF amphoes are located in ARD changwats. ARD activities in the three Udon VSF amphoes include road and well construction and improvement of rice, livestock, and poultry production. Amphoe Nong Pan has an AFG. In the four Sakon Nakhon VSF amphoes, ARD activities include road construction, water projects, fish raising in paddies, and improvement in vegetable production. Amphoes Muang and Phanna Nakhon have AFGs, and one is planned to be initiated in Wason Nakhon during 1968. In Kalasin, ARD is building roads and working to improve coconut raising and swine production. Prachin Khiri Khan is a new ARD area (late 1967), and has road building equipment diverted from Korat; an ARD survey made in November 1967 provided information for developing both short-range and long-range development programs for the area.

(U) Department of Local Administration (DOLA). All projects administered by DOLA, including construction of village shallow wells, primary education, DDP, and normal local administration, are to be reoriented as feasible to provide maximum support to VSF, also a DOLA project. Such support may involve allocation of qualified personnel, services, funds, or commodities.

(U) In late 1967 DOLA assumed the responsibility for the village shallow well program formerly administered by MOPH. This program has a budget of \$152,000,000 for construction of shallow wells and small dams and reservoirs over the next 5 years. These all fall within the charter of the VSF teams for their village improvement activities. The CD Department also has a capability for digging village shallow wells, and MOPH has the reputation for building the best most sanitary shallow wells of any RTC agency. Although all VSF shallow well, dam, and reservoir activities could probably be financed from the overall DOLA budget allocation, the technical capabilities of CD and MOPH are likely to be applied in support of VSF as well; some central planning and coordination may be required.

(U) In the 10 priority VSF amphoes there are, of course, DOLA officials (nai amphoes, nai amphoes). These men will be critically important to the effective implementation of the VSF program. The DDP program operated by DOLA has been initiated in 12 of the 30 tambons in the Udon VSF amphoes, 12 of 37 in Sakon Nakhon, and 4 of 17 in Kalasin; the remaining 56 tambons are all scheduled for DDP "sapha tambon" training by the end of 1969, as are most of the VSF tambons in Prachin Khiri Khan. (The relationships between VSF and other DOLA-administered programs which provide village protection--VCO, VSO, PAT, CA--are discussed below.)

(U) Community Development (CD) Department. The training and demonstration projects of the CD Department are of direct relevance to the effectiveness of VSF village improvement activities. CD support may include both financial and technical assistance. Whenever possible, CD is to give priority to expansion of its efforts in VSF operational areas. This may include support to VSF projects to improve or construct shallow wells, dams and reservoirs, construction of village roads, assistance to VSF-initiated agricultural projects. The CD efforts to train village and tambon development committees provide direct support to the overall improvement of tambon and village capabilities to implement the VSF program.

(U) There are 15 CD workers in Amphoe Nong Pan and 23 in Nong Pan in Chantaburi, and the program is scheduled to expand to 25 in 1969. In Chantaburi Sakon Nakhon there are 15 CD workers in Wason Nakhon, 1 in Phanna Nakhon, and 36 in Chantaburi. Kalasin has 15 CD workers in Kalasin and 20 in Sakon Nakhon.

UNCLASSIFIED

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(1) Ministry of Agriculture (MOA). This Ministry and its various departments, especially Agriculture, Rice, Livestock, Fisheries, and Forestry, are to give priority, whenever possible, to the provision of personnel, services, and commodities to VSF villages and areas. Most of the MOA support will be provided to VSF-initiated agricultural improvement projects. In all priority VSF chapters and amphoes there are MOA officials in agriculture, rice, and livestock. A regional agricultural center is located in Chantawat Khan Koen.

(2) Ministry of Health (MOH). This Ministry is to place priority, as feasible, on VSF villages and operational areas for the provision of new health facilities, medical and paramedical personnel, medical supplies, Mobile Medical teams, and other services. MOH support for VSF shallow well construction will be important. The training of village health committees by MOH field personnel will enhance the village's ability to use effectively its assigned VSF team.

(3) Ministry of Education (MOE). MOE is to give priority, whenever possible, to VSF villages for the assignment of new teachers, provision of school supplies, books, and so on. Schedules of Mobile Education Units and training programs are to be modified to give priority to VSF villages.

(4) In Udon there is a Mobile Trade Training Unit available for use in the VSF amphoes, and a Mobile Adult Education Unit which gives training in literacy, barbering, and tailoring. There is a Mobile Trade Unit operating in Amphoe Muang of Sakon Nakhon, and a Mobile Education Team is in operation in Prachuap.

(5) Mobile Development Units (MDUs). These field arms of the NSCC are capable of providing a wide range of support to VSF-initiated development efforts in villages near MDU operational sites. MDU No. 7, located in Amphoe Phen of Chantawat Udon, has 34 men; it could work in Ban Dura and Nong Han on request. MDU-2 in Nakhon Si Thammarat consists of 18 people. MDU-1 in Kalasin has only seven people and operates in Amphoe Kuchinarai.

(6) Royal Irrigation Department (RID). The construction activities of the RID may support VSF development and construction projects, particularly the dams and reservoirs. At times RID funds may be used to pay for VSF-initiated projects of interest to the RID. In all nine Northeast VSF amphoes the RID has built several water reservoirs. RID dam construction is being considered for Prachuap.

Interrelationships Concerning Village Protection

- (U) It has been clear since the first formulation of the VSF concept in Thailand in mid-1967 that the village teams would not be able, by themselves, to protect their villages against all threats by large, armed insurgent units. They should be capable, with their assigned weapons and the training given them, of defending themselves and their villages against small bands of insurgents, and of holding out for several hours should they be attacked by a relatively large insurgent unit; hopefully, long enough for reinforcements to arrive.
- (U) The primary response force for the village VSF teams is the tambon police station. Other elements which may be available to assist VSF units include: VDC, ISO, PAT, BPP, amphoe and chanaat PP, RTA, and RTAF. The VRS is related to VSF requests for assistance; it provides the VSF village with its radio, linked with the kamran and another set at the tambon police station.
- (U) Tambon Police Stations. The policemen assigned to the nearby tambon police station will form the basic reinforcement asset available to the VSF units. VSF teams will maintain constant radio contact with the tambon police station and with police patrols in the vicinity of their village. They are to report to the police information and intelligence collected on insurgent activities, movements, capabilities, and intentions. The police, assisted by other forces as available, will be responsible for coming to the aid of a VSF unit under insurgent attack.
- (U) The presence of the tambon police station (of 4-20 policemen) as the primary armed support element to reinforce the VSF units has been deemed so important as to be considered virtually a prerequisite for formation of VSF units in a tambon. VSF units will generally not be established in any tambon which does not have an operational tambon police station.
- (U) As of November 1967, in Udon there was one tambon station in Amphoe Kumphawapi, two in Ban Dura, and one in Nong Han. In Kalasin there were four tambon police stations in Kuchinarai, and two in Sahatsakhan. In the third Northeast VSF chingwat, Sakon Nakhon, there are three tambon police stations in Phanna Nakhon, six in Muang, two in Kut Sak, and five in Watan Niwat. Prachuap Khiri Khan had one station completed as of late 1967, with two more scheduled for completion during 1968; all are in Amphoe Kut Suri.

~~CONFIDENTIAL~~

UNCLASSIFIED

VILLAGE SECURITY FORCE

113

(U) Volunteer Defense Corps (VDC). There are active-duty VDC units currently providing village protection in all 10 VSF priority amphoes. As of early 1968 there were approximately 3,000 VDC members serving on active duty in village protection teams in the Northeast, providing protection to approximately 300 villages. Half of these were in OY10 Target Areas, in which the VDC served in Joint Security Teams (JSTs); the remainder were in CPM Village Protection Units (VPU's) elsewhere in the CPM changwats. In those cases where VSF teams are formed in tambons with operational VDC elements, the two will be able to provide mutual support and assistance. Eventually the VDC will become a ta-bon-level reinforcement and patrol force, basically an armed adjunct to the tambon police. However, for the near future the two elements in many areas are likely to coexist in neighboring villages.

(U) Village Security Officers (VSO). In two of the 10 priority VSF amphoes there are trained VSO members: Wanon Niwat, Changwat Sakon Nakhon, and Kuchinarai, Changwat Kalasin. There are 100 VSOs in the former amphoe and 93 in the latter. In some cases they are in a reserve role in their home villages; in other cases they are serving on active duty somewhere in their home tambon in a village protection role.

(U) When VSF implementation begins in these two amphoes (and later in the program in other VSO areas), many of these men will be re-trained and re-equipped as members of the VSF; those not so selected will be "demobilized." In sum, the VSO program will be absorbed into the VSF program as the latter effort reaches the original VSO tambons. No additional VSO members are being trained and no new units formed.

(U) People's Assistance Teams (PATs). There are operational PATs in four of the 10 priority VSF amphoes: Phanna Nakhon, Muang, and Kut Bak of Sakon Nakhon; and Kui Buri of Prachuap Khiri Khan. The status of these teams when VSF becomes operational in these areas in late 1968 has not yet been decided. The same statement applies to PATs in other amphoes which may receive VSF teams in 1969 or later years. The PATs may be used to provide armed support to the village-level VSF; they can assist the VSF in their development activities or provide on-the-job training to local VSF elements. This support could be provided to the several VSF teams in a tambon by one or two PATs which would move between these villages providing assistance to the static VSF team located there. While villagers are at the VSF training centers, PATs could be used to provide security to the area, pending the return of the VSF units.

(U) During 1968 it is not anticipated that any additional PAT units will be formed. The costs associated with the existing program during 1968 will be borne by the VSF project; DOLA is supposed to decide by June 1968 about the ultimate disposition of existing PATs.

(U) Border Patrol Police (BPP). Support to the VSF teams from nearby BPP elements may take a variety of forms. Although none of the priority VSF amphoes is located along the borders of the country, and thus no BPP line platoons are present, Mobile Reserve Platoons (MRPs) may be used on occasion in these VSF areas. These MRPs would provide armed support to the local VSF teams, patrol through the area, and also provide medical assistance to residents of VSF villages. Some BPP support could also be provided to VSF development activities, including assistance in construction and physical improvement projects.

(U) Amphoe and Changwat Provincial Police (PP) and Special Action Forces (SAF). VSF teams receive support from regular PP elements at amphoe level and above. Policemen may patrol through VSF areas and respond to calls for assistance from VSF units. The police fulfill a role in issuance, control and repair of VSF weapons, and repair of VSF radios (plus replacement of unusable sets). They participate in the security and background screening of VSF members and exercise a major voice in the selection of members. TNPD members assist in training VSF members by furnishing instructors and technical advice. Periodic retraining sessions may be given to VSF teams by amphoe (and tambon) policemen.

(U) Royal Thai Army (RTA). In areas where RTA units are operating to suppress the insurgents, they may be called upon to provide direct support to VSF teams. Their presence in the area should improve the overall security environment. Conversely, the RTA units may request support from the VSF for intelligence, guides, and so on.

(U) RTA units may operate anywhere in the 10 VSF priority amphoes, depending on the requirement. As of early 1968 those VSF amphoes most frequently covered by RTA operations were: Wanon Niwat, Changwat Sakon Nakhon; Kuchinarai, Changwat Kalasin; and Kui Buri, Changwat Prachuap Khiri Khan.

(U) Royal Thai Air Force (RTAF). RTAF flare support may be available for those VSF units attacked at night by the insurgents. Such support could be requested through the VSF radio contact with the tambon police station, which would pass the request to amphoe for action by amphoe PP or the nai amphoe. Flare ship support is likely to come from either Udorn RTAFB or Nakhon Phanom RTAFB.

~~CONFIDENTIAL~~

PARAMILITARY ORGANIZATIONS AND PROGRAMS

(F) It is unlikely that RTAF helicopter support would be required by VSF teams, but occasionally reaction forces coming to aid VSF elements would be ferried by RTAF helicopters. Urgent resupply requirements might be brought by RTAF helicopters to VSF units in remote areas impossible to reach by truck in a timely manner; medical evacuation by helicopter might occur.

(G) Village Radio System (VRS). This project will provide the FM-1/5 radio to be made available to each VSF village for use by the team (and phuvalban). This set will operate on the VRS frequency, permitting 24-hour-per-day contact with the kamnan and the local tambon police station (also to be provided a VRS-frequency radio).

(J) Interrelationships Concerning Intelligence and Psychological Operations

(1) Each VSF unit will have one member who has received training as a CA cadre. This man is to be the team's intelligence specialist, and he will report his information to the regular changwat CA collection center. The team will receive information of immediate tactical significance from their CA trained member or from a regular CA cadre if one is located in the same village. There are presently CA cadres operating in five of the 10 priority VSF amphoes: Huang, Kut Bak, Phanna Nikhom, and Wanon Siwat of Changwat Sakon Nakhon; and Kut Buri of Changwat Prachuap Khiri Khan.

(2) VSF units may receive support from the several ongoing psvops programs which have a village-level impact. Mobile Audio-Visual Units (MAVUs) trained by CSUC are attached to changwat CPMs and to Second Army Forward headquarters. When they operate in VSF areas they will provide direct support and assistance to the teams. The same is true of USIS Mobile Information Teams (MITs) which bring changwat and amphoe officials in contact with villagers and disseminate pro-government and anti-communist propaganda. Radio Station 909, located in Sakon Nakhon, operates mobile teams to record items of Northeast interest for broadcast on the air. The teams are likely to visit VSF villages.

Appendix A

PARAMILITARY FORCE DEPLOYMENT BY TAMBON Northeast Thailand

(U) This appendix is designed to show the combined distribution of paramilitary organizations in Northeast Thailand by tambon. It consists of a map (with tambon boundaries), and a table listing known active duty strength by tambon for each of the six Northeast changwats significantly covered by these paramilitary programs.

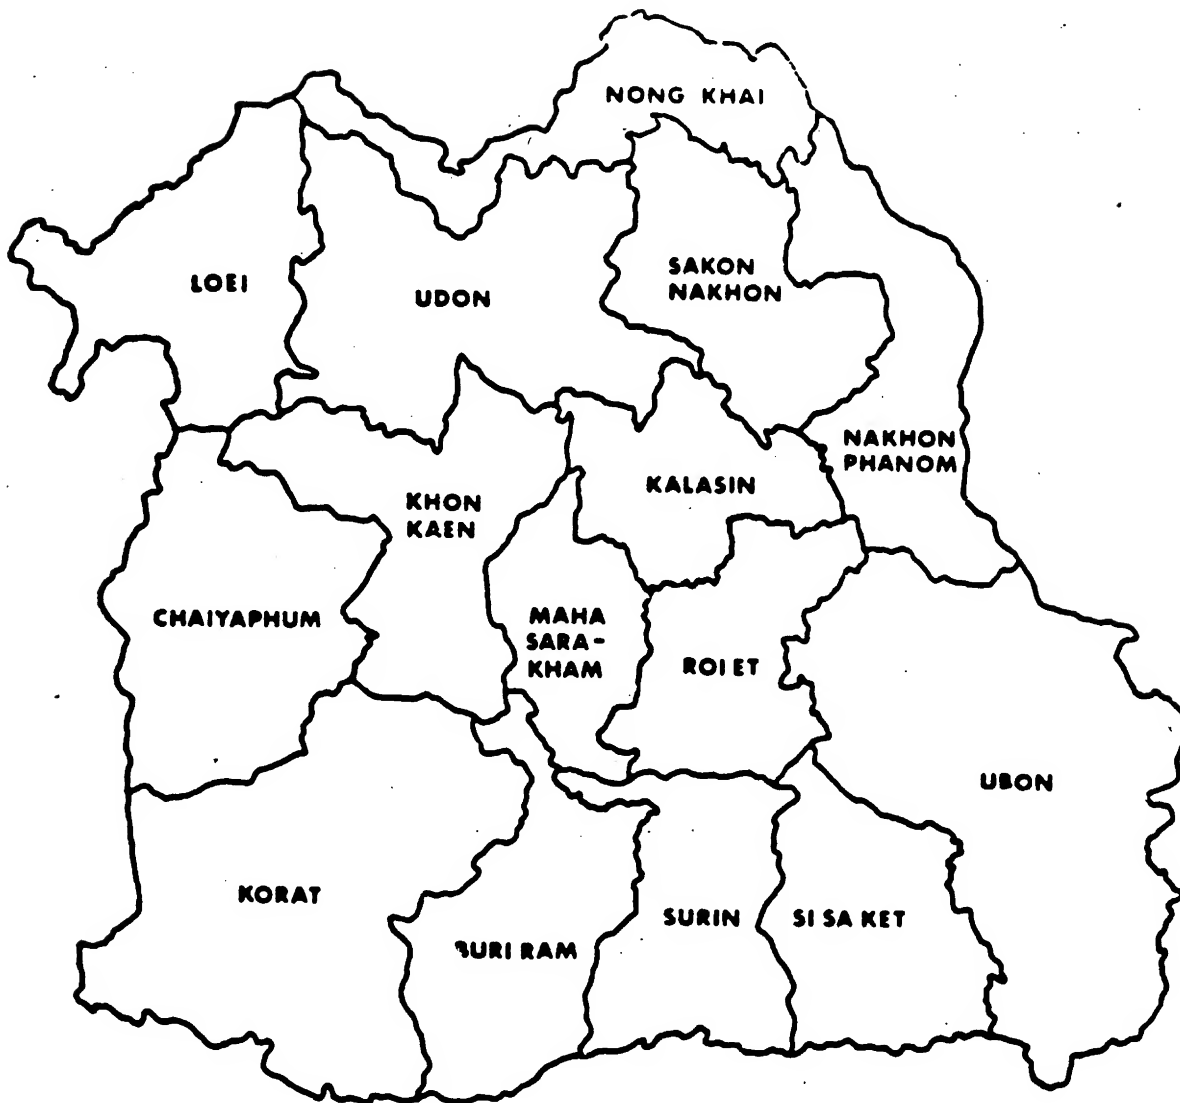

(U) As can be seen in Table A1, paramilitary units are on active duty in 9 of the 15 Northeast changwats shown in Fig. A1. In addition to those deployed in the six changwats described in detail in this appendix, there are active-duty VDC deployed in Loel, Buri Ram and Korat. It was impossible, however, to accurately determine the number and location of those VDC serving in Loel. In Buri Ram and Korat, there are only 170 VDC on active duty. They support operations in 0910 Plan Target Areas 11A and 11B and their locations and strengths are given in App C, tables C13 and C14.

(U) VDC personnel serving in 0910 Plan Joint Security Teams and village protection units are listed together. In addition to these, there are other VDC on active duty, usually at the amphoe level, assigned to reinforcement elements or security and intelligence duty. These are indicated in the "Remarks" section of the tables in App D. CA tambon locations are not given because of their sensitivity nor are the locations of VRS radios as nearly every tambon in the changwats listed here has at least one radio. Details of VRS locations are given in App E.

(U) Figures A2 through A7 were derived from the joint publication of DOLA, the National Statistical Office, and USOM, titled Amphoe-Tambon Statistical Directory of 14 ARD Changwats, updated by the inclusion of king amphoes and tambons created subsequent to the Directory's publication. The National Statistical Office code has been given for each tambon in which paramilitary forces are located to facilitate obtaining other information on the tambon such as that found in the Amphoe-Tambon Directory, and in the other volumes in this series. The code consists of 6 digits; the first two indicate the changwat, the second two indicate the amphoe, and the last two indicate the tambon.

(U) It should be noted that paramilitary organizations are, by their nature, extremely flexible--unit strengths are likely to be affected by sickness, death or simple absence; locations may be changed at the discretion of a nai amphoe or governor. Thus, while the information presented represents the best obtainable from official sources supplemented by field checks in many areas, the authors cannot guarantee that a visitor to a particular tambon will find there the exact number of personnel listed.

Appendix B

AUTHORIZED LOCATIONS AND STRENGTHS OF VDC UNITS Northeast Thailand

- (U) (C) Table B1 summarizes all known VDC allocations in the Northeast by changwat. As shown, all 15 changwats in the region are authorized VDC. The total authorization in the Northeast is 17,055; this figure comprises allocations for changwat companies, amphoe companies, border amphoe platoons, and intelligence and security roles.¹⁹⁹²

Changwat Companies

- (U) (C) Each changwat in the Northeast is authorized two VDC changwat companies, with the exceptions of Nakhon Phanom and Nong Khai which are authorized three. The company strength is 160; they are formed and trained, but none has been called to active duty.

Border Amphoe Platoons

- (U) (C) These platoons of 40 men each resulted from the reorganization of the VDC occurring in 1962. Their purpose was to protect critical border areas. Twenty-seven such platoons were authorized in nine Northeast changwats. However, with the exception of two (one in Amphoe Kantharalak in Changwat Si Sa Ket and the other in Amphoe Sankha in Changwat Surin) all have been converted to form the reinforcement platoon for the amphoe companies. Like the changwat companies, these platoons have been trained and formed, but none has been called to active duty.

Amphoe Companies

- (U) (C) At the request of CSOC, 74 amphoe companies have been authorized in the Northeast. Their coverage is indicated in Fig. B1. These companies consist of a 17-man headquarters, a 40-man reinforcement platoon (25 of which are former border amphoe platoons), and 12-man squads in each tambon of the amphoe. Some of the tambon squads have been called to active duty as units to serve in Joint Security Teams or as village protection units (see App. C and D); however, none of the companies as a whole has been activated. These authorizations are shown in Table B2.

Other VDC Authorizations

- (U) (C) As noted in the VDC section of this volume, VDC are authorized for assignment for security and intelligence duty. The bulk of these authorizations are used by the NSCC to provide security elements for its MDIs. Table B3 lists the 1966 authorizations for this role. It is believed that the authorizations were similar in 1967 and 1968.

¹ Sources referred to in this appendix are those listed in the Bibliography section of this volume.

Appendix C

VDC DEPLOYMENT IN 0910 PLAN
JOINT SECURITY TEAMS

(C) The following tables show VDC deployment in all 11 0910 Plan Target Areas, the locations of which are shown in Fig. C1. In each case data are presented on the number of VDC assigned in each village, the number of J.T. leaders and their parent organization, and the presence of other local security forces in the village protected by the JST (where such information is available). For completeness, forces in Target Areas 6, 7, and 8 villages in addition to the VDC are shown; similar information is not available for Target Area 8, which also has a large non-VDC presence in the villages. The VPT members shown in Target Area 8 are local volunteers who received limited training and weapons from the Chawwat then CPV. They are paid, to a great extent, through the regular CSOC budget used for support of VDC-JSTs, and are described elsewhere in this volume.

(C) Several different sources have been used to compile this appendix on VDC deployment. Information was obtained from CSOC-13 section,¹² the Volunteer Defense Division of DDA/Mol,¹³ and the US Embassy.¹⁴ In several cases this information has been verified or revised on the basis of field investigation. Field visits have been made to Target Areas in the following districts: Luri kam, Kala-in, Nakhon Phanom, Sakon Nakhon, Than, and Udon.

(U) Based on this collation, the number of VDC assigned to active duty in 0910 Area 18 is 4,506. They are assigned to 151 villages, for an average of 10 VDC per village. In the VDC, the VDC are led by one or more police cadres, the total police manpower committed to the JST effort is 544. The data are summarized in Table C1, followed by detailed information in the tables following.

¹² Sources referred to in this appendix are those listed in the references to the JST section of this volume.

Appendix E

VRS INSTALLATIONS

Northeast Thailand

(U) This appendix presents information on the exact location of all VRS radios in the Northeast installed in Phase I of the project, which concluded in February 1968. The changwat, amphoe, tamhon, UTM coordinates, type of radio installed and its assigned frequency are listed. The information was provided by USOM Public Safety Division.

(U) The information is presented by changwat as follows:

Table E1	Kalasin
Table E2	Lori
Table E3	Maha Sarakham
Table E4	Nakhon Phanom
Table E5	Nong Khai
Table E6	Rui-Et
Table E7	Sakon Nakhon
Table E8	Ubon
Table E9	Udon

(U) All 40 VRS radios in Khon Kaen were provided to changwat headquarters for use as desired throughout the area. No information is available regarding VRS operational locations in Khon Kaen.

INSTRUCTIONS

1. **ORIGINATING ACTIVITY** Enter the name and address of the contractor, subcontractor, grantee, Department of Defense activity or other organization responsible for issuing the report.

2a. **REPORT SECURITY CLASSIFICATION** Enter the overall security classification of the report. Indicate whether "Restricted Data" is included. Marking is to be in accordance with appropriate security regulations.

2b. **GROUP** Automatic downgrading is specified in DoD Directive 5300.10 and Armed Forces Industrial Manual. Enter the group number. Also, when applicable, show that optional markings have been used for Group 1 and Group 4 as authorized.

3. **REPORT TITLE** Enter the complete report title in all capital letters. Titles in all caps should be unclassified. If a meaningful title cannot be selected without classification, show title classification in all capitals in parentheses immediately following the title.

4. **DESCRIPTIVE NOTES** If appropriate, enter the type of report, e.g., interim, progress, summary, annual, or final. Give the inclusive dates when a specific reporting period is covered.

5. **AUTHOR(S)** Enter the name(s) of author(s) as shown on or in the report. Enter last name, first name, middle initial. If military, show rank and branch or service. The name of the principal author is an absolute minimum requirement.

6. **REPORT DATE** Enter the date of the report as day, month, year, or month, year. If more than one date appears on the report, use date of publication.

7a. **TOTAL NUMBER OF PAGES** The total page count should follow normal pagination procedures. Also, enter the number of pages containing information.

7b. **NUMBER OF REFERENCES** Enter the total number of references cited in the report.

8a. **CONTRACT OR GRANT NUMBER** If appropriate, enter the applicable number of the contract or grant under which the report was written.

8b, c, & d. **PROJECT NUMBER** Enter the appropriate military department identification, such as project number, subproject number, system numbers, task number, etc.

9a. **ORIGINATOR'S REPORT NUMBER** Enter the official report number by which the document will be identified and controlled by the originating activity. This number must be unique to this report.

9b. **OTHER REPORT NUMBERS** If the report has been assigned any other report numbers, either by the originator or by the sponsor, also enter this number.

10. **AVAILABILITY LIMITATION NOTES** Enter any restrictions on further dissemination of the report other than those

imposed by security classification, using standard statements such as:

- (1) "Qualified requesters may obtain copies of this report from DDC."
- (2) "Foreign announcement and dissemination of this report by DDC is not authorized."
- (3) "U. S. Government agencies may obtain copies of this report directly from DDC. Other qualified DDC users shall request through."
- (4) "U. S. military agencies may obtain copies of this report directly from DDC. Other qualified users shall request through."
- (5) "All distribution of this report is controlled. Qualified DDC users shall request through."

If the report has been furnished to the Office of Technical Services, Department of Commerce, for sale to the public, indicate this fact and enter the price, if known.

11. **SUPPLEMENTARY NOTES** Use for additional explanatory notes.

12. **SPONSORING MILITARY ACTIVITY** Enter the name of the departmental project office or laboratory sponsoring (paying for) the research and development. Include address.

13. **ABSTRACT** Enter an abstract giving a brief and factual summary of the document indicating the nature of the report, even though it may also appear elsewhere in the body of the technical report. If additional space is required, a continuation sheet shall be attached.

It is highly desirable that the abstract of classified reports be unclassified. Each paragraph of the abstract shall end with an indication of the military security classification of the information in the paragraph, represented as (TS), (S), (C), or (U).

There is no limitation on the length of the abstract. However, the suggested length is from 150 to 225 words.

14. **KEY WORDS** Key words are technically meaningful terms or short phrases that characterize a report and may be used as indices for cataloging the report. Key words must be selected so that no security classification is required. Identifiers, such as equipment model designation, trade name, military project code name, geographic location, may be used as key words but will be followed by an indication of technical content. The assignment of links, rates, and weights is optional.

Policy on the Redistribution of DTIC-Supplied Information

As a condition for obtaining DTIC services, all information received from DTIC that is not clearly marked for public release will be used only to bid or perform work under a U.S. Government contract or grant or for purposes specifically authorized by the U.S. Government agency that is sponsoring access. Further, the information will not be published for profit or in any manner offered for sale.

Non-compliance may result in termination of access and a requirement to return all information obtained from DTIC.

NOTICE

We are pleased to supply this document in response to your request.

The acquisition of technical reports, notes, memorandums, etc., is an active, ongoing program at the **Defense Technical Information Center (DTIC)** that depends, in part, on the efforts and interest of users and contributors.

Therefore, if you know of the existence of any significant reports, etc., that are not in the **DTIC** collection, we would appreciate receiving copies or information related to their sources and availability.

The appropriate regulations are Department of Defense Directive 3200.12, DoD Scientific and Technical Information Program; Department of Defense Directive 5230.24, Distribution Statements on Technical Documents; American National Standard Institute (ANSI) Standard Z39.18-1987, Scientific and Technical Reports - Organization, Preparation, and Production; Department of Defense 5200.1-R, Information Security Program Regulation.

Our Acquisition Section, **DTIC-FDAB**, will assist in resolving any questions you may have concerning documents to be submitted. Telephone numbers for that office are (202) 274-6847, or Autovon 284-6847. The Reference Services Section, **DTIC-FDRA**, will assist in document identification, ordering and related questions. Telephone numbers for that office are (202) 274-7633 or Autovon 284-7633.

DO NOT RETURN THIS DOCUMENT TO DTIC

**EACH ACTIVITY IS RESPONSIBLE FOR DESTRUCTION OF THIS
DOCUMENT ACCORDING TO APPLICABLE REGULATIONS.**
